——, near Moorestown, N. J., 20th of Fifth month, LINDLEY M., son of Daniel and Hannah G. Leeds, in the 16th year of his age; a member of Chester Monthly Meeting. Although he had been of an orderly and innocent life, and remarkable for his conscientious regard for truthfulness, yet he found these would not suffice on a dying hour, and during the latter part of his protracted illness, he was brought under much concern and contrition, on account of having indulged in levity and "idle words," often petitioning earnestly for forgiveness and strength to overcome, saying, "I want to know my sins forgiven, and my entire sanctification effected." He spent much time in secret prayer, and though he said, he had to *wait long* for an answer, yet, through the mercy of the Redeemer in whom he trusted, he was finally enabled to say, "He has given me the victory; my sins are all forgiven; I have not an idle thought; I have sweet peace." Near his close, though suffering much from difficulty of breathing, he imparted much advice and counsel to those around him, and after addressing his younger brother and sister, his mind appeared drawn forth toward his *absent* friends, and he said, "*All* my dear young friends, give up your hearts to the Lord; O! give your hearts to the Lord; now in your youth, while health and strength are afforded you, make the Lord your friend, and he will *be* your friend in time of need, and with more of like tenor, and his surviving friends have the consoling belief, he is now an inhabitant of the "blessed mansion" he so clearly saw, prepared for him.

——, 21st of Fifth month, 1856, ANN, wife of Thomas Wickersham, in the 71st year of her age; a much esteemed elder and member of Middleton Monthly Meeting, Columbiana county, Ohio; a firm believer in the doctrines of our religious Society, and opposed to any innovation on them. She was favoured to bear her sufferings with patience and resignation to the Divine will, saying she had examined the state of her mind as closely as she was capable, and saw nothing in her way. To another time she observed that she was not able to say much, but her mind felt very peaceful. She also expressed a concern for the young people that they might be preserved from the evils that are in the world. The recollection of her consistent course of christian faithfulness, is comforting to her surviving relations and friends, who feel a lively hope that her spirit is, through the mercy of her Redeemer, admitted into the realms of everlasting rest and peace.

For "The Friend."

Mammoth Steamship.

We have on a former occasion furnished our ers with some account of the extraordinary a vessel, now building on the Thames; but the ving, which is extracted from the Quarterly ew, will give them a much more correct idea of normous dimensions, and unparalleled structure accommodations.]

he voyager up and down the Thames has no- with astonishment, during the last eighteen hs, the slow growth of a huge structure on the ern extremity of the Isle of Dogs. At first, a normous poles alone cut the sky-line, and ar- d his attention; then vast plates of iron reared selves edgeways, at great distances apart; and onths elapsed, a wall of metal slowly arose een him and the horizon. The sooty engineer, e leans over the bulwark of Bridegroom No. 2, h questioned respecting it, tells you it is "the Ship"—he knows no more. If, moved by cu- y, the voyager hails a boat and rows ashore, sturdy oarsman can only tell you it is "the Ship." If you question Jack, whom you see ng along the road laden with a green parrot a bundle of yams, as to what they are doing, he will eye the huge mass for a moment, and y with a vacant negative. Even those who are med of its purpose, doubt and argue respect- t. "Look 'ee here," said an old salt to us, point- with his pipe to the stem and the stern of the , which lie parallel with the river, "here 's her and here 's her stem, and here 's the water; how they are going to launch her I can't figure ays."

he great ship, or "Great Eastern," as she is etimes called, projected by the eminent engineer, uel, the father of Transatlantic Steam Naviga- , although building in the midst of the largest ction of seafaring people in the world, stands a der and a puzzle to them all. And indeed, the ment you are inside the works of Scott, Russell, o. at Millwall, you feel the reason of the strange with which the maritime population view the ster which is slowly growing up, and overshadow- not only the ship-yard itself, but the portion of new town immediately in its neighbourhood. ere are the merry ship-carpenters, caulking y with monotonous, dead-sounding blows? ere are the artisans chipping with their adzes, ing up one after another huge ribs, and laying the massive keel? Where are the bright augers gleaming in the sun, as sturdy arms work out the boltholes? None of these old accustomed sights and sounds of ship-building are to be found; but in their place we see the arm of steam, mightier than that of Thor, welding some iron shaft big as "the mast of some huge admiral," or punching inch-plates of iron as quickly and as noiselessly as a lady punches card-board for a fancy-fair ornament. Steel, urged by the same potent master, is seen showing its mastery over iron as the huge lathes revolve, or the planing-machine pursues steadily its resistless course, whilst, in place of the shavings of the carpenter, long ringlets of dull gray metal cumber the ground. The ship-carpenter is transmuted into a brawny smith, and the civil engineer takes the place of the marine architect. A closer inspection of this Leviathan vessel shows us how completely the employment of a new material has necessitated new ideas with respect to construction. She runs along, or rather will—for she is not yet quite up in frame—some seven hundred feet; those portions of her yet unfinished at stem and stern show her partitions or bulkheads running nearly sixty feet in height, and standing just sixty feet apart. If we examine the outer walls of these huge partitions, we see at once that the ship has no ribs springing from a keel or back bone—none of the ordinary framework by which her bulging sides are maintained in their places; but, on closer inspection, it is found that she has a system of ribs or webs, longitudinal instead of transverse, running from stem to stern of the ship, up to eight feet above her deep water line; and riveted on each side of these thirty-two webs or ribs, which are again subdivided at convenient lengths, are plates of iron three-fourths of an inch in thickness, forming a double skin to the ship, or a dermis and epidermis. Thus her framework forms a system of cells, which, like the Menai tube, combines the minimum of weight with the maximum of strength. A glance at the transverse midship section will show at once this portion of her structure. Hitherto it has been the practice to build iron ships in exactly the same manner as regards framework as wooden ones; that is, the strength of the sides has been made gradually to lighten towards the deck, which, being of wood, can offer but slight resisting power. Thus iron ships of the old method of construction are peculiarly liable to break their backs upon the application of force, either to their two ends or to the centre of their keels, just, in short, as a tube would be easily broken, one side of which was made much stronger than the other. The "Birkenhead" iron troop-ship was a melancholy instance of this unscientific method of construction; for it will be remembered that immediately she struck, her wooden deck doubled up and snapped in two, as a stick would snap across the knee, whilst stem and stern reared for a moment high in the air, and then went down like stones into the deep.

As you stand watching the process of building up this double skin, or framework of the ship, the question immediately strikes the mind, how are these unyielding plates of inch iron made to accommodate themselves to her lines, which are seen to run as finely fore and aft as those of a Thames wager-boat? How are the innumerable curves which die away into each other, to be produced by any aggregation of rectilinear pieces of flat boiler plate? In ordinary wooden ships, the planking, by its elasticity, allows itself to be modelled to the ribs; but here there are no ribs, in the true sense of the word, and the form of the vessel must depend upon the inclination given to each separate piece of iron before the fastening process is commenced. And such, in fact, is the case. Every individual plate, before being fixed in its proper position, was the subject of a separate study to the engineer. Of the ten thousand, or thereabout, that compose the framework of the ship, only a few situated in the midship section are alike either in size or in curve. For each a model in wood, or "template," as it is technically called, had originally to be made, and by these patterns the plates were cut into their required shapes by the huge steam shears, in exactly the same manner as a tailor cuts out the various portions of a garment. The "list," or inclination to be given to each plate, is the next process to be gone through; and this is produced by passing it through a system of rollers, which can be so reversed in their action, and so adjusted, as to give it any required curve. The "template," studded with holes around its margin, is then fitted to it, and a boy with a stick dipped in white lead marks through them the places upon the iron where the rivet-holes are to be punched; when this last process is completed, the plate is lettered with two or three separate letters, indicating the precise place it has to take in the ship. Thus the hull is first carefully thought out in detail, and is then regularly and mechanically put together, in much the same way as a tessellated pavement.

The process of fastening the plates affords another curious contrast to the old method of bolting employed by the ship-carpenters. The holes in the plates to be held together being brought in exact apposition, bolts at a white heat are one by one introduced, and firmly riveted whilst in that condition by a group of three men, one the upholder, who holds the bolt in its position by placing a hammer against its head on the inside of the ship, whilst two sturdy Vulcans, with alternate blows, produce the rivet-head on the other. The bolts contract in cooling, and draw the plates together with the force of a vice, and hold them so forever afterwards. The rapidity with which this process is performed strikes the spectator with astonishment. A set of three men, and a boy to shovel the hot bolts out of the furnace, will in the course of a day close up four hundred rivets; and speed in the process is requisite, when we remember that before the ship can swim three millions of them must be made secure.

If we clamber up the ladders which lead to her deck, some 60 feet above the ground, we perceive that her interior presents fully as strange a contrast to other vessels as the construction of her hull does. Ten perfectly water-tight bulkheads, placed 60 feet apart, having no openings whatever lower than the second deck, divide the ship transversely; whilst two longitudinal walls of iron, 36 feet apart, traverse 350 feet of the length of the ship. Thus the interior is divided, like the sides, into a system of

cells or boxes. Besides these main divisions, there are a great number of sub-compartments beneath the lowest deck, devoted to the boiler-rooms, engine-rooms, coal, and cargo, &c.; whilst some 40 or 50 feet of her stem and stern are rendered almost as rigid as so much solid iron by being divided by iron decks from bulwark to keel. Her upper deck is double, and is also composed of a system of cells formed by plates and angle irons. By the multiplication of rectilinear compartments, the ship is made almost as strong as if she were of solid iron, whilst, by the same system of construction, she is rendered as light and as indestructible, comparatively speaking, as a piece of bamboo. There is a separate principle of life in every distinct portion, and she could not well be destroyed even if broken into two or three pieces, since the fragments, like those of a divided worm, would be able to sustain an independent existence.

A better idea perhaps of the interior of the ship can be gained at the present moment than when she has progressed farther towards completion. As you traverse her mighty deck, flush from stem to stern, the great compartments made by the transverse and longitudinal bulkheads, or parti-walls of iron, appear in the shape of a series of parallelograms, 60 feet in length by 36 in width; numerous doors in the walls of these yawning openings at once reveal that it is here that the hotels of the steamship will be located. If we were to take the row of houses belonging to Mivart's and drop them down one gulf, take "Farrance's" and drop it down the second, take Morley's at Charing Cross and fit it into a third, and adjust the Great Western Hotel at Paddington and the Great Northern at King's Cross into apertures four and five, we should get some faint idea of the nature of the accommodation "The Great Eastern" will afford. We speak of dropping hotels down these holes, because the separate compartments will be as distinct from each other as so many different houses; each will have its splendid saloons, upper and lower, of 60 feet in length; its bed-rooms or cabins, its kitchen and its bar; and the passengers will no more be able to walk from the one to the other than the inhabitants of one house in Westbourne Terrace could communicate through the parti-walls with their next-door neighbours. The only process by which visiting can be carried on will be by means of the upper deck or main thoroughfare of the ship. Nor are we using figures of speech when we compare the space which is contained in the new ship to the united accommodation afforded by several of the largest hotels in London. She is destined to carry 800 first-class, 2000 second-class, and 1200 third-class passengers, independently of the ship's complement, making a total of 4000 guests. A reference to the longitudinal and transverse sections will explain her internal economy more readily than words. The series of saloons, together with the sleeping apartments, extending over 350 feet, are located in the middle instead of "aft," according to the usual arrangement. The advantage of this disposition of the hotel department must be evident to all those who have been to sea and know the advantage of a snug berth as near as possible to the centre of the ship, where its transverse and longitudinal axes meet, and where of course there is no motion at all. It will be observed that the passengers are placed immediately above the boilers and engines; but the latter are completely shut off from the living freight by a strongly-arched roof of iron, above which, and below the lowest iron deck, the coals will be stowed, and will prevent all sound and vibration from penetrating to the inhabitants in the upper stories. As the engines and boiler rooms are separated from each other by bulkheads, in exactly the same manner as the saloons, a peculiar arrangement has been made to connect their machinery without interfering with their water-tight character. Two tunnels, of a sufficient size to give free passage to the engineers, are constructed fore and aft in the centre of the coal bunkers, through all the great iron parti-walls. By this arrangement the steam and water-pipes which give life and motion to the ship will be enabled to traverse her great divisions, just as the aorta traverses in its sheath the human diaphragm.

Let us return, however, for a few moments to the deck, in order to give the reader a clear idea of the magnitude of the structure under our feet. The exact dimensions "over all" are 692 feet. There are few persons who will thoroughly comprehend the capacity of these figures. Neither Grosvenor nor Belgrave Square could take the "Great Eastern" in; Berkeley Square would barely admit her in its long dimension, and when rigged, not at all, for her mizenboom would project some little way up Davies Street, whilst her bowsprit, if she had one, would hang a long way over the Marquis of Lansdowne's garden. In short, she is the eighth of a mile in length, and her passengers will never be able to complain of being "cooped up," as four turns up and down her deck will afford them a mile's walk. Her width is equally astonishing. From side to side of her hull she measures 83 feet, the width of Pall Mall; but across the paddle-boxes her breadth is 114 feet,—that is, she could just steam up Portland Place scraping with her paddles the houses on either side. With the exception of the sky-lights and openings for ventilating the lower saloons, her deck is flush fore and aft. However splendid this promenade might appear with respect to those of other ships, we question if it is at all too large for the moving town to whose use it is dedicated. Room must be found for the holiday strolling of between three and four thousand persons, whilst she is careering through the heated atmosphere of the tropics, and not merely for a few score blue-nosed gentlemen, such as use the deck of the transatlantic steamers for a severe exercising ground.

(To be continued.)

For "The Friend."

The Refiner's Fire.

Many and various are the trials and afflictions through which we are permitted to pass, in order that we may be brought to a sense of our responsibility and dependence—of our many mercies and favours—and into a feeling of gratitude for the goodness, long-suffering and forbearance of our merciful Creator, who hath created us for the purpose of his own glory, and preserved us through life.

It is no evidence that we are forgotten or forsaken, when we are cast into the furnace of affliction; but rather a token of divine love and regard, for "whom the Lord loveth, he chasteneth and scourgeth every son whom he receiveth." He will have a tried and afflicted people to serve him, and bring glory to his name, which shall be exalted among the Gentiles.

As it is written, "Zion *shall* be redeemed with judgment, and her converts with righteousness;" and the Lord *is* purifying his church; is teaching his people, whereupon alone they must build, in order that their faith may endure the test by which it and every man's work shall be tried. Our foundations are being tried, and nothing will be able to stand, but the immutable Truth resting on the Rock of ages; upon which the church of Christ ever has, and *will ever* continue to be built.

The fire which is in Zion, and the furnace which is in Jerusalem, shall try every profession, and every work, of whatsoever sort it may be. only the earth, but the heavens also shall be shak but "they that trust in the Lord, shall be Mount Zion, which *cannot* be removed."

If we are honest with ourselves, we *shall* brought to the humbling acknowledgment, that all, like wandering sheep, have gone astray fr the fold of unity and peace, into the wildern where many have remained, separated from heavenly Shepherd, by the wiles of our comm enemy, who is unwearied in his endeavours to us away from "the still small voice" of the Sp of Truth, which teacheth as never man taught.

Instead of cleaving unto the king and captain our salvation, very many have left the narrow p of self-denial, to follow the reasonings of their wills, and the teachings of fallible men, to denial of Him whom we profess as our leader Head; and thus we have made unto ourselves l many, and gods many. Some saying, I am Paul, and some, I am of Apollos; thus giving dence that while professing the unity and faith the gospel, we are yet carnal, judging, and be led by the sight of the eye, and the hearing of ear, and not serving Him who is invisible.

And now that our beloved Society has b made to suffer for its departure from the hid path and direction of pure wisdom, it is to be ho that the members may learn to apply their he unto Him who searcheth us, and trieth our re not leaning upon "man, whose breath is in nostril;" but trusting in the mighty God of Ja who alone is able to raise up, of these stony he of ours, children unto Abraham, and to turn hearts of the people, as a man turneth the wa course in his field. Then, and not till then, shall become the people we were designed to be, even friends and followers of Christ, the Saviour of world.

For "The Friend."

Proverbs.

An honest man hath special need of charity prudence.

Kind *encouragement* in good, cutteth at the r of evil.

An ill example strengtheneth the hands of wicked.

Zeal without judgment is an evil, though it zeal unto good.

Society is a chain of obligations, and its li must support each other.

A wise man heedeth all things, and in his eyes is a fool.

A man of a haughty spirit is daily adding his enemies.

A man of a base mind daily subtracteth from friends.

If truth must be sacrificed to unity, then fa fulness were folly.

If man must be obeyed *before* God, the mar have bled in vain.

Honest men stand *firm* for the principles of ligion.

A violent sectarian spirit is a sign of relig declension.

It is not knowledge, but love, that distinguis saints from sinners.

The wisdom of a man lies not in satirizing vices of others, but in correcting his own.

Not to aim at great things, is the way to h common comforts in plenty.

Whosoever thinks himself wise enough, or vi ous enough, is in a fair way never to be either.

True christian love is of an enlarged, dis rested nature; it loves *all* who love the Lord J in sincerity.

rty spirit is confined within the limits of sect, hristian love oversteps the narrow boundary, can recognize a brother in each humble be-, who *practically* exemplifies the holy doc- of the gospel.

hen we love our own party *exclusively* or per- of our own peculiar train of thinking, we love *ideas* in them. We see our own image, and re it.

t when we love those who differ from us in ssentials, *because* we discover in them the lity, meekness, purity, patience and benevo- of the Redeemer, *then* our love is truly dian. It is Christ in them whom we love.

we believe that in a future state, all the party actions by which we are known one from an- here, will be obliterated, we may reasonably that those who are best prepared for it, are inclined to regard mankind as one family; on the contrary, that those who, in support of several parties, employ themselves in devising xecuting schemes by which the peace and har- y of the church and the world are laid waste, *not* in the way of being either prepared them-s, or instrumental in preparing others for future edness.

The Exodus of the Tartars.

correspondent of a London paper, writing from stopol, under date of Fifth month, 2d, 1856, ;—Of all the painful and pitiable sights which been presented to me in the course of the war h is past, there was not one which was so affect- is that of the Tartar Exodus, and their flight f the Crimea. Whether they were animated, ey say, by the dread of their Russian task- ters, or by their desire to ameliorate their con- n, the motive must be powerful which can drive ole race from their homes. They leave those eful and beautiful valleys for ever, and flock into aklava with all their goods, in the hope of obtain- the means of escape from their cruel oppressors. n Thursday, the whole population in the valleys ide the Russian lines began their mournful pro- ion. They left their homes silently. The old , women, and children were placed on the ara- above the pile of cushions which seem to con- te all their household furniture. Many of them d bitterly. Several of these poor pilgrims were xhausted from illness or old age, that there was e chance of their ever seeing the land they seek gain. Each araba was drawn by two small ocks or oxen, led by the head of the family; the st children kept by his side or followed on foot. he women, closely veiled, in spite of their grief, ked round with wonder at the marvels which aklava presented, and were for a time beguiled n thoughts of their abandoned dwellings in Bionk komia, Varnutka, Baidar, Upu, Ozenbash, or blin; but as the sea opened upon them, and they nd themselves among strangers, the sense of their ition came back to them with redoubled force, l they seemed lost in despair. The procession, ich I saw, was about a mile in length, and was med of arabas in single file as close to each other they could pack,

They are a docile, kind-hearted, gentle race, and much superior in appearance to the Tartars I r at Kertch and Eupatoria. They have all fine th and eyes. Many of the men are very well king, and the old men are exceedingly dignified aspect, and possess great native ease and good eeding. The young women possess graceful forms, d are believed to be very pretty, but they are not en seen unveiled, and the old women do not dis- y the least traces of beauty. I have never seen y where children more lively and handsome in the face than some who were among the emigrants yesterday.

As I was riding through the streets, some Russian officers passed, and gave signs of dissatisfaction at the proceedings of the Tartars, which were very evident in their faces. The latter were very abject in their bows as their masters passed them. And this is the end of one of the conquering races of the world! Whether the Tartars deserved their fate, or have been treated badly by fortune, one cannot but feel pity for them if they are punished for the crimes of their ancestors. They came into the Crimea conquerors, and they leave it as exiles.

It is said that they are going to colonize the Dobrudscha, or to settle at Rustchuk and Kostendji. The first named place is but a pestiferous *marais;* it is a grave to those who visit, and I sincerely trust that these poor Tartars, in whom we ought to take great interest—for we have brought upon them this aggravation of the evils of their position—will not be doomed to such misery and certain death as they will find in the Dobrudscha. The number of families ready to emigrate is stated to be 1500.

Richness of Russia.—Few persons in this country have any just or definite idea of the immense wealth and resources of Russia.—Even the extent and value of her fisheries are not properly estimated. It is stated that 500,000 individuals are employed about them, in the Lower Wolga and Northern Caspian. The sea coast fisheries in the Black Sea, Sea of Azoff, the Baltic and White Sea, are great and productive. All her noble rivers everywhere abound with fish, and, owing to the numerous fasts in the Greek Church, the consumption of fish in Russia is very great.

There are in the Russian empire 542,177,248 acres of land in forests. These are of immense value, and as communications are opened up throughout the country, they will become still more valuable. There has been immense wastage in times past, but of late years the government has appointed special officers to look after them, to preserve them from unnecessary destruction. Russia is one of the best wooded countries in the world. The quantity of timber yearly consumed must be immense, when we recollect that nearly all the houses throughout the Russian empire are built of wood.

The number of horses in Russia exceeds by 7,000,000 the total numbers in France, Austria Prussia, the United States and the United Kingdom together; about 14,000,000. The value of the whole must be very great. Saddle horses sell from 300 to 1000 silver rubles each; and with the exception of the numbers that roam the Eastern provinces, say 4,000,000—a peculiar and hardy and valuable breed—the Russian horses are of an excellent quality. Their cavalry horses are equal to the English, and superior to any other in Europe. The number in Russia present to our view a force equal to 129,000,000 effective men. Taking them at half the average value (£32 10s.) of horses in the United Kingdom, or £16 6s. each, the total value will be $354,750,000.

The total number of cattle in the Russian empire exceeds by nearly 6,000,000 the total number in France, Austria and Prussia (24,823,384,) and their value is also very great. At half the average value of those in the United Kingdom, the amount at £7 each, will be £217,000,000.

Minerals of the most valuable and useful kinds abound in Russia. Salt is found in various places; but there is a district of country on her southern frontier, extending nearly in a like parallel with the northern coast of the Sea of Aral and the Caspian, and to the north of the line mentioned, between both, where salt is found of the finest quality in such abundance that it is sufficient to supply the whole world for millions of years! Immense beds of sulphur have lately been discovered about Saccamara, on the banks of the Wolga; and vast gold fields, richer than those in California and Australia, have lately been discovered around the sources of the Lena. Silver is most abundant at Nartshinsk, on the Chinese boundary. There is good reason to believe that all Siberia abounds with the precious metals. Very large fields of gold have been found in various parts of Russia, especially in the iron districts. To the westward of the Ural Mountains and the Don, in the government of Ekaterinosly, a vast field of the very finest of anthracite coal has been found, and is now working to a great extent. The gold produced in the Ural mountains was, in 1851, £3,500,000. Sometimes it is much more and nearly double. Beside gold and silver, Russia has a vast extent of iron mines, yielding that metal of the very finest quality. There are also large mines of platina, copper, lead and zinc.—*D. News.*

For "The Friend."

William Dewsbury.

(Continued from page 310.)

With regard to the beginning of his ministerial labours, William Dewsbury says, "I waited in the counsel of my God, in the calling where I was placed, until the year 1652. In the Eighth month, of this year, the word of the Lord came unto me, saying, 'The leaders of my people cause them to err, in drawing them from the light in their consciences, the anointing within, which the Father hath sent to be their teacher, and which would lead them into all truth, to seek the kingdom of God in observations, where it is not to be found. So my people perish for want of bread. Freely thou hast received, freely give and minister. What I have made known unto thee in secret, declare thou openly.' Which word constrained me by the power of it, to leave my wife and children, and to run to and fro to declare to souls, where their teacher is, the light in their consciences; of which the Lord hath given to every one a measure to profit withal, for the exercise of the conscience towards God and man. Waiting in the light for the power of Christ, he would lead them up to the living fountain of waters, where their souls would find refreshment in the presence of the Lord, and their bread would be sure and their water never fail—as the Lord has made manifest to my soul."

When W. Dewsbury was directed to delay entering upon the work of the ministry until 1652, the reason assigned was, that at that time there would be *a greater hungering and thirsting in the hearts of the people after the Lord.* That this was the case may be in part concluded from the fact, of the great success which attended the ministry of George Fox and other Friends, who had begun sometime previous to that date, as ministers of the Gospel, to exercise their several gifts. As early as 1647, the doctrines of Friends began to be spread through Leicestershire, George Fox's native country, and by the year 1648, through Warwickshire, Nottinghamshire, Derbyshire, and the adjacent counties; in Yorkshire in 1651, the date of his and W. Dewsbury's first interview; in Lancashire and Westmoreland in 1652; in Cumberland, Northumberland &c., in 1653; and in London and most parts of the united kingdom, in 1654. John Whiting, in reference to the city of London, at the date last mentioned, which was the first year that James Naylor and others visited it, says, "There was much running to and fro, and an increase of knowledge, and a *thirsting in many thousands, for the breaking forth of the day of salvation, and fulfilling of the promises.*"

There must have been great longing in thousands of the people, after the life and power of religion, and consequently a preparation to receive the testimony of these baptising ministers of the gospel, that the truth should have spread over the country, and such a multitude be gathered to the same holy standard of righteousness and purity in the course of seven years, more than a year of which George Fox was in Derby and Carlisle prisons. It was a day of great consolation to those whose souls were panting for the water of life; and when persecution began, it proved their faith and allegiance, and many were kept faithful towards the Lord. Those who would not endure the storm were carried back into the world; and those whom suffering could not shake from the foundation, were more and more refined as gold in the furnace, and became more firmly established in the Truth.

It is uncertain whether Wm. Dewsbury settled at Wakefield as early as 1652, or continued a few years after his marriage at Allerthorpe; but as Brigham and Frodingham are neighbouring villages to the latter place, it would seem from the following statement probable he still continued there. Thomas Thompson, one of his first converts, relates this circumstance. "Now it came to pass about the Sixth or Seventh month, of the year 1652, we heard of a people raised up at or about Malton, who were called Quakers, which was the first time I heard of that name being given to any people. They were by most persons spoken against, but when I strictly inquired what they had to lay to their charge, that might give cause for such aspersions as were thrown out upon them, I met with none that could justly accuse them of any crime. They said they were fantastical and conceited, and burnt their lace and ribbons, and other superfluous things, which they used formerly to wear, and that they fell into strange fits of quaking and trembling. But these reports increased my desire to see, and be acquainted with some of them; and in the Eighth month, of the aforesaid year, I heard that the Quakers were come to Bridlington, whereat I greatly rejoiced in my spirit, hoping I should get some opportunity to see them. This was that faithful labourer and minister of the gospel, William Dewsbury, who then was ordered into these parts; and on Fifth-day following I heard they were come to Frodingham. Being on my master's work at Brigham, I could not go in the day, but determined to go in the night, and would gladly have some of my acquaintance to go with me; but the night being very dark, none would go, so I went alone. Coming into the room where William was, I found him writing, and the rest of his company sitting in silence, seeming to be much retired in mind, and fixed towards God. Their *countenances being grave and solid*, preached unto me, and confirmed what I had before believed, that they were the people of the Lord. After a little while, William ceased writing, and many of the town's people coming in, he began, in the power and wisdom of God, to declare the Truth. And oh! how was my soul refreshed, and the witness of God reached in my heart! I cannot express it with pen. I had never heard nor felt the like before; for he spake as one having authority and not as the scribes; so that if all the world had said, 'nay,' I could have given my testimony, that it was the everlasting truth of God."

This Friend soon became a minister of the same word. "In the same month," he says, "my mouth was livingly opened to declare the name of the Lord, and preach repentance to the people; and the work of the Lord prospered in the hands of his faithful servants. I knew *a bridle to my tongue*, and was greatly afraid lest I should offend the Lord, in thought, word, or deed. The word of the Lord was in me, 'Thou shalt not do thy own works, nor think thy own thoughts, nor speak thy own words in this, my holy day.' Though I suffered and went through many great exercises, yet the Lord bore up my spirit, and carried me on, while I abode faithful to Him, to the praise of his own name. But through reasonings, and looking too much at my own inabilities and unfitness for so weighty a work, the enemy sometimes prevailed to keep me in disobedience and cast down my mind so low, that my growth was thereby hindered for a time. Yet did the Lord in his endless love to my poor soul, renew his visitations, and my mouth was often opened in the congregations of his people, to praise his worthy name."

W. Dewsbury's first journey beyond this vicinity appears to have been in the latter months of the year 1652, when he travelled into Westmoreland, Cumberland, and Lancashire; and shared the common lot of other Friends in those days, who were subjected to great sufferings for the truth's sake. Early after G. Fox's release from Carlisle jail, where he had been shamefully treated, he mentions going to Thomas Bewley's, where a Baptist preacher was convinced. Robert Widders and he went to Coldbrook steeple house, where the people fell upon them, took the Baptist's sword from him, beat him sorely, and almost killed Robert Widders. William Dewsbury also went to another steeple house, near by, and the people beat him so as almost to kill him. This journey appears to have extended into the year 1653 about which time, George Whitehead tells us, that at Sedberg in Yorkshire, as William Dewsbury was publishing the truth at the market-cross and warning the people to turn from the evil of their ways to the grace of God, the light of Christ in their consciences, some rude persons endeavoured with violence to push him down. And setting their backs against the high stone cross, not aware, probably, of its tottering condition, with their hands against him, the cross gave way, and in its fall broke in pieces. G. Whitehead was then about sixteen years of age, having been convinced of Friend's doctrines about a year before; and he relates this occurrence, noticed at the time as a remarkable instance of the special providence of God attending W. Dewsbury in his labours; for notwithstanding the multitude of people collected to hear him, not one was killed or even injured by the accident.

The numbers who attached themselves to the new Society, being rapidly on the increase, it appears from the tenor of W. Dewsbury's early epistles, that circumstances soon arose among the first converts, which proved the necessity of some kind of discipline for the mutual help of the members, for the preservation of society and good order in the churches, and for the establishment of meetings, as the truth spread over new districts. An epistle written by W. Dewsbury, in 1653, contains perhaps the first outline on record of an attempt at a system of religious discipline among Friends. It showed some analogy to that which was several years afterwards introduced by George Fox, in a form much amplified, and which has continued in operation in the Society to the present day. This epistle, still extant, was evidently sent to George Fox, and received his signature, after that of W. Dewsbury, and is endorsed in G. Fox's handwriting, "William Dewsbury to Friends."

(To be continued.)

Clay on Slavery in the Territories.— We take an extract from a speech of H. Clay, delivered so late as 1850, which forcibly argues that slavery is not extended to the Territories of the United States by the constitution, and cannot therefore be legally introduced in such territories.

"In my opinion, therefore, the supposition the Constitution of the United States carries sla into California, supposing her not to be a Stat an assumption totally unwarranted by the cons tion. Why, if the constitution gave the privel it would be incompetent for California to adopt provision which she has in her constitution. Constitution of the United States, being supreme State could pass an enactment in contraventio the constitution. My rules of interpreting the C stitution of the United States are the good old r of '98, '99. I have never in my life deviated f those rules; and what are they? The constitu is an aggregate of ceded powers. No powe granted except when it is expressly delegate when it is necessary and proper to carry it effect as a delegated power; and if in any inst the power to carry slaves into the territories is p ranteed to you by the constitution, or is an incid necessary to the carrying out of any other po that is delegated in the constitution, I have unable to perceive it amidst all the vicissitude public life and amidst all the changes and turn party. I never in my life have deviated from t great fundamental, and I think indisputably principles, of interpreting the Constitution of United States. Take these principles to be t and where is the power? Can any body poi out to me? What gives you a right to carry slaves to California? Where is the delegated po to which it attaches as necessary implication? is nowhere to be found. You must resort to s such general principle as the federalists did in early history of this country, when they conten for the doctrine of general welfare. But you not put your finger upon any part of the const tion which conveys the right or the power to e slaves from one of the States of the Union to territory of the United States. Mr. President, will remark that I am expressing an opinion u the power, the constitutional right. I do not go the question of how the powers of Government to be exercised or applied in the course of adm istration. That is a distinct question. I am a ing the question of constitutional power. Nor, can I admit for a single moment, that there is separate or distinct right upon the part of State individual members of the State, or any portio the people of the United States to carry slaves the Territories, under the idea that those Territo are held in common between the Several Stat —*News.*

For "The Friend

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned m bers of the Yearly Meeting of Philadelphia.

ROWLAND ELLIS.

(Continued from page 317.)

Rowland Ellis was a man of note in the ne bourhood in which he resided, and had a con tent estate. In the year 1686, the subject of a moval to Pennsylvania, pressing on his mind, concluded to visit the Province, and make s arrangements as might be best for the accommo tion of his family, when the time should fully c for transporting them there. On the 16th of Eighth month, 1686, he took passage at Milfo Haven in a Bristol ship, bound for Pennsylva by the southern route, then a favourite one. took his eldest son Rowland with him, and al one hundred of his neighbours, accompanied th The passage was a very long one, in which m of the passengers died from hunger, and oth soon after their arrival, from the effects of the vations they had endured. Some who long

, never recovered their usual strength. The nt of suffering and death would doubtless have even greater, if the vessel had not touched at adoes, where it remained nearly six weeks. the kind entertainment of Friends and some s did much to recruit such as were not too much usted. They were twenty-four weeks in reach- heir port, and arriving about the beginning of nd month, 1687. On reaching Philadelphia, ho were able, hasted to their respective settle- s, and Rowland Ellis among them. He staid t nine months, "in which time," it is said, "he laid a foundation towards such improvements ere necessary to accommodate the family he ded to bring over." Leaving his son with his rnal uncle, John Humphrey, a valuable Friend, n the spring of 1688, returned to his own try. From what took place after his return, it ident that he made a purchase of part of the nouth tract, the original settlers of which being ly tradesmen, and not able profitably to farm, left it, and removed into Philadelphia.

e found that some of his property had been d for distraints during his absence, but this g no new feature of suffering, was not difficult ear. His way was not yet clear to remove to newly obtained possessions, and he awaited the with patience and hope. A gift in the minis- of the gospel had been bestowed upon him, and ough his labours in that line were not as fre- t as some, yet being sound and lively, they e to the edification of the churches.

great trial awaiting him, one of his daughters, otless Ann the heiress, married the priest of the sh at Dologelly. We know not what circum- ces had occurred to bring about an acquaint- ship between them, but we must suppose the ng woman had never submitted to the restrain- influence of true religion, when she thus openly emned the principles and admonitions of her ly parents. The troubles and trials she brought n those parents, whom she must have both loved reverenced, although little thought of, when in enjoyment of gratified affection, would doubt- be present to her mind, bringing deep bitter- s in seasons of sorrow and sickness. In the r 1696, Hugh Roberts visited Wales from Penn- ania, on religious service. He, during his visit re, doubtless, at the desire of his valuable friend, father, called twice to see this strayed rebel- s child and her husband.

n the year 1697, Rowland Ellis came to Penn- ania with his remaining family, and settled at mouth. Soon after his arrival, William Ellis, inister from England, paid a religious visit in erica. With this Friend, Rowland Ellis had p religious fellowship, and after his return to his ive country, Rowland wrote him the following er. It shows the anxious desire of a father, ting for the well-being of a disobedient yet still l-beloved child.

"The 28th of the First mo., 1699.

"My much esteemed Friend, William Ellis:— these lines come to thy hands, thou mayst un- rstand what often hath been in my mind to tell e, that if ever it come before thee to visit Friends Wales, I desire this kindness of thee, partly for y name's sake, but rather upon Truth's account, en at Dologelly meeting, in Merionethshire, in rth Wales, to inquire for my daughter, if she be en alive, and for her husband, who is a priest. thou findest thyself free, and anything inclined ereto, knock at his door, and see whether she is ite dead, or slumbering among the dead. I do lieve a living invitation may call home a strayed eep, though gone far into the wilderness, and there, it may be, fast entangled in briars, and bound up in strong chains. If there is any breath left in her, she may answer, though in a land of darkness, and under the shadow of death. The good Shepherd takes great pains to unloose the lost sheep from their bonds and entanglements, and David-like, killing the lion, and delivering the lamb out of his mouth, to bring the same to their right mind, to know the Shepherd's tents. Well, my friend! I believe some have done things of this nature; and who can tell, if it come before thee, but thou mayst, through the power of God, be instrumental to open their eyes; they both are very kind to Friends. Our friend, Hugh Roberts, hath twice visited them, they being sick; her husband took it very kindly. So, with my dear love unto thee, I remain thy friend,

ROWLAND ELLIS."

Being a man of good natural ability, a sufficient education, and comfortable estate, his neighbours soon brought him into public life. In 1700, he was elected to represent Philadelphia county in the Assembly of the Province, a service for which he was well qualified. He probably did not, although willing to fulfil his social and political duty towards his fellow-citizens, much relish this appointment, yet he submitted to it for a few years. It is said that his service in the State was considerable, and it is probable that other offices were placed upon him.

We have abundant evidence on the minutes of the different meetings to which he belonged, that he was much used, and was very serviceable in the church. His public labours were not allowed to interfere with his domestic duties. He was earnestly concerned for the proper education of his children, and sought by timely instruction, and righteous restraint, to inculcate the principles of Truth, and to repress the practice of error. He was often concerned to have religious opportunities in his family, in which he hoped and prayed that his children might be drawn to wait upon God for themselves, and become acquainted with the teachings and leadings of the Holy Spirit. To some of his children, if not all, his labours were blessed, and they long survived him, bright shining examples of true christian virtue, of strong minds, bowing under the cross of Christ.

We need not follow him in his services, civil, social and religious. His friends testify that he was of "a sound judgment, ready and willing to assist his neighbours and Friends," where his aid and advice were desired. "He was zealous for supporting our christian discipline, and exemplary in conducting himself agreeable therewith, sometimes saying, 'If the hedge of discipline was not kept up, the labour of the husbandman would soon be laid waste.'"

Thus he lived in love and usefulness till he had entered his eightieth year. His children were married; his beloved wife Margaret had been just removed from him by death, and doubtless he had experienced many other strippings, but he was green and cheerful in spirit, getting out to his religious meetings. He was, and it probably was his last visit to Philadelphia, at the Quarterly Meeting held there in Fifth month 31st, and Sixth month 2d, 1731. In the Quarterly Meeting of Ministers and Elders, he was appointed a representative to the Yearly Meeting, composed of ministers and elders; but before that meeting was held, for him the last conflict was over, and the enduring victory won; thanks be unto God, who giveth the victory through our Lord Jesus Christ.*

In the Sixth month, he attended his own Monthly Meeting held at Gwynned, and, whilst in it, was taken unwell. Being conveyed to the house of John Evans, the husband of his beloved daughter Ellen, he said to several friends, who had gathered round him, "I am glad I was here to-day, for I had a lively meeting, and though I now feel much weakness, and the infirmities attending my advanced age, yet I can say, Truth is as dear, and as sweet as ever."

Another remark he made was, "Satan sometimes lies in wait like a roaring lion to devour me, but I find he is chained by a secret hand, which limits his power, so that he cannot harm me." His sickness held him, but a few days; and before his departure, he expressed that he had a sense of his near approach to the haven of rest and quiet, where none could make him afraid. He died at the house of his son-in-law, about the beginning of the Seventh month, 1731, and his body was interred in Friends' burying-ground at Plymouth. His memorial closes thus, "We trust it may be said, he rests, enjoying the reward of the righteous, and his works do follow."

(To be continued.)

* Sixth mo. 8th, he wrote a memorial concerning his wife; see next number.

The Camels—Their Arrival and their Uses.—The Camels which were recently brought to New Orleans from the East, excite much curiosity. A correspondent of the New Orleans Picayune, who was on board the transport Fashion, in which they were brought on shore, from the ship Supply, gives the following account:

"Towards evening the dreary mud banks of the mouth came in view, the land all the time sinking lower and lower. The Camels were on board the United States store ship Supply, by the side of which we were soon fastened, and ready to receive the animals. It being late we did not transfer any of them that day. We went aboard the ship Supply, however, impelled by curiosity, to see the wonderful beasts. They were lodged below, well sheltered from the bad weather, and had three Arabs and two Turks to attend to their wants. The ship had brought them a long voyage from Smyrna, consequently the poor animals had been confined in a very narrow place for over three months. They numbered thirty-five, including several young ones, one of which was born on the voyage, in the vicinity of the Trade Winds, in consequence of which, the jolly Jack tars called it "Trade Wind." The others had various Arabic cognomens, but it is intended to name them after the states of the Union, which would be highly appropriate.

"The next day the Camels were installed in their new home; but not without some difficulty, for their natural timidity rendered them difficult to manage. The animals being all safely on board, and everything in perfect order, we bade adieu to the ship Supply, both fired a salute, and our pondrous wheels striking the water, soon bore us out into the open sea, in full speed for Matagorda Bay.

"The weather, with very little exception, continued pleasant and the sea smooth, a very fortunate thing for the Camels. They are a very patient animal, scarcely ever uttering a sound, but are extremely belligerent among themselves, it requiring all the watching and care that can be bestowed on them to prevent them from biting each other.

"There were two or three that boasted two humps, but the majority had only one. It is supposed they will prove of infinite service on the great prairies of Texas, and each Camel will certainly be more valuable there than five horses—the country, in some respects, resembling the desert plains of the East, if we substitute grass in the place of sand. They can carry enormous weights, and can bear heavy fatigues and long continued journeys—thus being of great

service to our armies on the frontiers. The only difficulty to be apprehended is from the climate in winter, for the cold will weigh most rigorously on them. To this, however, they may become gradually accustomed, and the animal being fully acclimated, there will be no further trouble about that.

"They will carry without stopping, except at long intervals, immense weights of baggage and stores, under a hot broiling sun, the fatigue of which would soon kill a horse. By importing a great many, the United States will soon have a considerable breed of Camels on the Western Continent. It may be said to Columbia's honour, that she has taken the lead in introducing these powerful aids to civilization among us, for the conquests of peace surpass those of war. We arrived at the bay of Matagorda on Monday evening, May 12. The next morning the animals were taken ashore, and at last regained their liberty. The inhabitants crowded around them with pardonable curiosity, to behold the huge, uncouth animals, and many were the sensible comparisons given vent to on the occasion. The Arabs and Turks, who had dressed themselves in rich Oriental costumes, were kept busy explaining to the inquisitive crowd. Now and then a Camel in the excess of joy, would run with a terrible leaping and kicking among the people, who would consequently give it full room to gambol in. That evening, they all started for their destination, in regular Eastern order, as for a distant caravan."

For "The Friend."

Mary Wright.

As we have no doubt many readers of "The Friend," have a lively and pleasant recollection of the name of *Mary Witchel*, a minister from England, who resided with her husband several years in this country; and afterward returned to her native land, where losing her companion by death, she was afterwards married to a Friend of the name of Wright. We send for insertion the following lines addressed to her, on the completion of the hundredth year of her age—(she is yet living, for aught we have heard.)

Sixth mo. 7th, 1856.

TO MARY WRIGHT,

On Completing her 100th year.

"I will not sing a mortal's praise,
To Thee, I consecrate the lays,
To whom my powers belong;
These gifts, upon Thine altar strewn,
O! God, accept, accept thy own;
My gifts are thine; be thine alone
The glory of my song." *Montgomery.*

Dear aged friend! whose lengthened course has now
Stretch'd the wide span of full one hundred years,
We cannot thoughtlessly desire that thou
Mayst be detained here, in this vale of tears.

We cannot say, may, "New Year's day" come round,
And find thee living *then*,—amongst us still;
We rather wish, as thou dost, to be found
Watching, and waiting on our Father's will.

Thou hast thy tender, loving friends we know;
Thy children, and their children too, and theirs;
And peradventure infant accents flow,
To lisp the love that kindred nature bears.

And more than these, thou hast a numerous tribe
Of those who meet thee in the house of prayer,
Who could thy worth most feelingly transcribe;
Just as their hearts have felt it written there.

These, surely can unite, as with one voice,
To wish thee blessings here, and heaven in store;
The consummation of the Christian's choice,
Where sin and sorrow can distress no more.

And say, dear aged friend, hast thou not known
The depths of Satan, and the power of sin?
And canst thou not, by tried experience, own,
Yea, and deplore, how weakness reigns within?

How oft the *will*, with half consenting power,
Feels a strong impulse to accept the good;
And yet, alas! in Satan's potent hour,
Acts not the part,—the better part it should?

Canst thou not tell how that determined foe,
Plants his deep snares along the Christian's way,
To draw him from his watchfulness? and oh!
To harrass, to perplex, to lead astray?

Ah! it is well our Saviour knoweth all;—
That he has trod this weary world of ours:
That tho' no sin could on his nature fall,
He felt the anguish of temptation's powers.

What love! what pity! must have fill'd his heart,
Whose sufferings pour'd upon him like a flood,
But oh! what confidence those words impart,
"Call'd," "chosen," and "redeemed," and that by blood.

And is not this the privilege of all,
Whom faith has strengthened to accept his love?
Even as many as our God shall call,
Drawn by the Spirit's mighty power to move?

And is it not thy happiness to know
A Saviour's presence in thy peaceful cot?
Those heavenly joys which from acceptance flow,
With which a stranger intermeddleth not?

May we, dear friend, press on in faith, and look
Not at ourselves, the passing, or the past,
But to the promises of that bless'd book,
Secure to us, if we but hold them fast.

Let us remember what the Saviour taught,—
"I am the Shepherd, and am known of mine:"
My sheep by Satan never shall be caught,
I will not one of them to him resign.

He that believeth, hath eternal life:
Where Jesus is, his chosen ones shall be:
He keeps his own amid perpetual strife,
And they are safe to all eternity!

He will not leave them, when their eyes grow dim;
He will be there to combat the last foe:
They shall have all the glimmering lamp to trim,
And where the Bridegroom is, his saints shall go.

There is a resting-place prepared in heaven;
A home amid the many mansions there;
A crown of righteousness is freely given,
And Christ's own likeness, all his saints shall bear.

Dear Saviour, keep this aged friend of ours,
Thy own redeemed one,—keep her on her way,
Be with her 'mid the wreck of nature's powers;—
Be with her to the end of life's long day.

Support her when the conflict comes at last,
And struggling life *must* yield to death's embrace:
Support her, till that solemn scene is past,—
Then shall her song be, "It is all of grace."

Written, last day of the year 1855. M. A.

For "The Friend."

Evils of Mixed Associations.

Whilst sitting in our Meetings for Discipline, and travailing with my older brethren for the welfare of our Religious Society, my heart has often been brought into sorrow, on account of the great number of young people, who are cut off from religious fellowship with us, especially on account of accomplishing their marriages with those not in membership with us.

In seriously pondering these things, the language of a worthy elder, on a similar occasion, has at times been brought to my remembrance with much feeling. Addressing the young men present, he said, that some, like Esau, would sell their birthright for a mess of pottage, for whom there was no place found for repentance, though he sought it with tears. Is not this a true picture, of the sorrowful condition that many bring themselves into, by a departure from our christian testimony against mixed marriages. I well knew a couple, whose religious opinions were so different, that the wife declared, they did not dare to converse about religion. This, perhaps, was an extreme case, but in the most favourable cases, there are so many difficulties and disadvantages, where persons of different religious views are united in marriage, that ser reflection in time, would generally prevent sue consummation. No doubt, men and women v designed by the great Head of the Church t helpmates in the important concerns which relat our everlasting welfare, as well as in those which long to this transitory state, and from a child has seemed to me a sad thing, for those to be un in so close a connexion, who could not see eye to eye in these things, and encourage each othe pressing forward after durable riches, and entrance into everlasting rest, when time here s be no longer.

In seriously considering these things, it has seem to me, that one great cause of our beloved so Friends being so often led astray, in this and ot things, is mixing too much with the world, being much in the company of those who are not of our S ety; thus little by little, insensibly, perhaps, at f they are led from one thing to another, into a dis-re and dis-esteem for the distinguishing testimonies our Society, and come to believe, through the in ence of their lively companions, that the wa Friends is too strict and too narrow for any old folks, or those who are inclined to melancho Beware, my dear young friends, of this tempt bait of the grand enemy—of him who was a from the beginning, and the father of lies. It i these mixed companies, many simple hearted o are first tempted, to partake of a "*Social glas* as it is called; and here again, they are invited their companions to go with them to hear s popular preacher, thus being led to trample on precious testimony against a hireling man-m ministry, and in this kind of company, the affecti often become entangled, and connexions are form very unsuitable for those who have been educa in our Religious Society. "Keep near the Tr and the friends of Truth, and the Truth will k near to thee," was the language of a faithful serv of the Lord, formerly, and no doubt thousa at this day could livingly set their seal to but if we turn our backs upon the reproofs of struction, and avoid the company of those v might be helpful to us, we must expect the Tr to forsake us, and that we shall be led into delus and error. I believe that much of the trial we now passing through as a Society, is owing to m ing too freely with the world's people, becom too much entangled with its maxims and frie ships, thus a door has been opened for the introd tion of error, and our spirits have become too mu leavened with the world and the things of it, insta of abiding more under our own vine and fig t and waiting in the silence of all flesh, to see w our great master would have us to do. If w were our individual concern, day by day, and ev day, His power would be found sufficient to gu and guard the youth, as well as the aged; and fathers and mothers in the church, instead of mou ing the loss of standard bearers, would rejoice behold instead of the father, the son, and instead the mother, the daughter. Yea, "Judges would raised up as at the first, and counsellors as at the ginning," to stand for the ancient doctrines a testimonies of our once highly favoured Socie And when the final winding up of all things h below approached, we would have the comfort assurance, that we had fought the good fight, a kept the faith, and that henceforth there is laid for us a crown of righteousness, which the Lo the righteous Judge, shall give us in that day.

What are all the pleasures, and treasures, a friendships of this transitory world, when compa with this inheritance incorruptible, which the r somed and redeemed shall enjoy through the cou less ages of a never ending eternity.

mes in the West—Better Homes and More rts in Pennsylvania.—A recent tour through states of Michigan, Indiana, Illinois, Iowa, nsin, and Minnesota, to aid a friend in search ew home, enables us to say what is a home e West. The descriptions which our East- wspapers delight to put in currency, have our people with discontent, till we have be- a nomadic race, wandering to and fro in search abiding place that shall far surpass what we been used to. We have become possessed with lea, that, once in the West, we shall enjoy ise; by which we mean, that with little toil ittle money, we shall secure better food and comforts than are enjoyed where we are. To many will add, that money can be made with ind without risk, by speculating in lands. e first revelation that opens one's eyes on ar- g in the Great West, is, that land, so far from cheaper, is dearer than at home. The whole ry is held on speculation by land jobbers. In hands are lands enough to supply any pos- want of actual settlers, for twenty, nay, fifty, ahead! These adventurers lead an idle life. swarm in the West. They are the towns- e that give seeming prosperity and stability to usand towns, that have sprung up everywhere; which are destined to extinction so soon as the table burst explodes the inflated bubble. e say inflated, because the prices have been up altogether among themselves, over mint s, &c. Daily these men may be seen crowding drinking "saloons," where they have nothing to do but to steam up the prices. "I will give $20 per acre for your section, (one hundred s off in the wilderness) payable in my section another place) at same rate." Immediately l goes around that Smith was offered $20 and sed it, and at once every one puts up his price. by day, month after month, during the past years, this vagrant business has been almost sole occupation of two-thirds of the people in West; and who will wonder that the most ex- agant inflation, is the consequence? The few ers in the far west who raise grain and have ized large profits, have put it all into land specu- g, and counting on enormous advances, they e greatly neglected their agriculture.

Having a record of the prices asked in every di- ion, we are enabled to say that land is cheaper Pennsylvania than in any of the Western States. ess you go far away from the settlements, no- g can be had in the wild state under $10 per e, and within five miles of the towns at twice and ce and often ten times that figure. In any t and in any place, you cannot realize a farm h similar improvements at any such money as l secure you a better home in Pennsylvania.

But people who leave Pennsylvania, soon lose ambition about comforts and appearances, when y locate out West. A shed, which here would rcely be deemed good enough for cattle, answers a dwelling there, because it is as good as their ghbours. They get used to the bad water that niversal; and they prefer New York keg but- to the trouble of making the article themselves. us their food scarcely ever varies from salt pork, tatoes, bad butter and bread, with dried beans; o coffee and whiskey, *ad libitum*. The pipe, of arse, is ever in the mouth between meals.

The general desert is *quinine*. Everybody takes either to avert or to cure the ague. We call it inine, but there is probably not an ounce of pure lphate of quinine in the whole Western country. very sort of counterfeit is sold for quinine. This atter of health is not sufficiently prized by east- n men, who look for paradise in the West. One scarce meets a woman that is not sallow or wo- begone, over the wide expanse westward of Ohio.

The woman's toil is far greater than with us, for every woman must be her own help. The men grow intolerably lazy, and women find it hard to make them do the chores about the house, such as cutting and splitting wood. Fuel is so scarce and dear, that it is always skimped in the supply, and the severity of winter in such shells of houses, demands extravagant consumption of wood to keep from suffering.

The States we have named may be considered, in general feature, to be one vast level prairie, with scarce a hill, and no mountains. Here and there a few clumps of scrub oak trees may be seen. The fewest conceivable streams of water drag their sluggish currents unhealthily along. In Michigan, Wisconsin and Minnesota, lakes of great beauty abound; but there is a counterpoise against them, viz., vast areas of swampy land, which would seem to spread an unhealthy influence around.

In a century hence a system of drainage may be adopted, as population advances, and woods may grow up under cultivation which may change all this. But this affords no comfort to the pioneer, who leaves a good home to worry out his life and his family amid the present discomforts and the certain sickness inseparable from a new settlement in the wilderness.

To the speculator, we can only say, It is possible that the bubble is not ready to burst. Everybody in the west admits that the end is at hand, but they think "the fools are not all dead;" and they expect another harvest among them this year, after which they mean to let it slide.—*Ledger.*

Epistle of George Fox.

To Major General Dewsborough,

Friend,—We who are in the presence of God, the ruler and upholder of all things, who know and dwell in his power, to it we must be obedient; which brings us to stand out of all men's wills, unlimited. To say "we will if the Lord permit," in a case of buying and selling to get gain, if the intent be so to do, may be done; but we, standing in the power of God to do his will and to stand out of man's will, if man propose, "we shall have our liberty if we will say we will go to our outward home, if the Lord permit, or if it be the will of God;" and because we cannot say these words in this case shall not have our liberty, when we know that the will of God is, we shall go to speak at some other place; here we cannot say these words truly. For to say "we will go to our outward habitation if it be according to the will of God," when we know the will of God is otherwise, we cannot speak truly and clearly. Neither can any man say so to him, that requires it of him; who stands in the power, and knows the power of God to lead him according to God's will, when it leads him to another place than his outward home. But the Son of God, who came to do, and did the will of God, had no place whereon to lay his head, and the apostles and many of the followers of Christ had no certain dwelling place. Now if these should have been restrained, because they could not say they would go to their outward homes, if it were the will of God, when they knew it was the will of God they should not, and they could not do the will of God in doing so, and therefore could not speak these words to satisfy man's mind and will, would not such restraint have been evil? Abraham could not do the will of God but in going from his native country; and who are of faith are of Abraham, of whom Christ came according to the flesh. Now if you allege, "this is to let all loose, and at liberty to idleness," I say, No; such as are in the power of God, who do the will of God, come to receive his wisdom, by which all his creatures were created; and by which they are used to his glory. This I shall say; whoever are moved by the Lord God of glory and power, to go to their outward habitation, such of us may go to our outward homes, and there be diligent in serving the Lord, that they may be a blessing from the Lord God in their generation, diligently serving him in life and doctrine, in manners, in conversation, in all things, and who are moved of the Lord to go to any other place, we standing in his will, and being moved by his power which comprehends all things, and is not to be limited, we shall do his will, as we are commanded to do. So the Lord God open your understandings, that you may see this great power of the Lord which is now manifesting among his children in this his day; that ye may not withstand it in our Friends, that are come into the power of God, and to God, and know him by whom the world was made; by whom all things were created, that were created; and there was not anything made but what was made for him, and to him, and by him; who is the power of God, and doth enlighten every man that cometh into the world. Friends being come to this light, which cometh from Christ, and having received power from him, by whom all things were created, who hath all power in heaven and earth given to him, who is the wisdom of God, we have received wisdom and power from him, by which the Lord doth give us to know how to use and order the creatures to the glory of him who is the creator of all things. Friends here are taught of the Lord to be diligent serving him; and who come into the life, the Scriptures were given forth from, are given up to serve the Lord; and of this I have in all your consciences a witness. So if thou open the prison door, we shall not stay here. If thou send a liberate, and set us free, we shall not stay in prison; for Israel is to go out free, whose freedom is purchased by the power of God, and the blood of Jesus. But who goeth out of the power of God loseth his freedom. G. F.,

And the rest who are sufferers for the truth in Lancaster jail.

The 13th of Sixth month, 1656.

How to plant Potatoes.—A pamphlet has been published in Scotland, by a farmer named Craig, on the potato disease and its cure. By planting three different kinds of potatoes together last year very favourable results were achieved. Two out of the three varieties planted had been, on previous occasions, affected by the disease; all were found to be perfectly healthy and sound when dug, and experience has shown that they kept well during the winter. He believes that the potato disease may be safely attributed to the violation of one of the laws of nature, and that the generation of the malady is occasioned by the plants being too closely bred, or in other words, by "sub-breeding."

The lesson we derive from this is, that two or more varieties of seed potatoes should be planted in each hill.

THE FRIEND.

SIXTH MONTH 21, 1856.

SUMMARY OF EVENTS.

EUROPE.—News from England to to Fifth mo. 31st. The English papers are filled with accounts of the peace rejoicings. They also express much anxiety respecting the difficulties, with the United States. The news of the recognition of the Padre Vigil, following so close on Lord Clarendon's amicable advances, had given much dissatisfaction. The Earl of Elgin having made a motion in the House of Lords, for the despatches relative

to the troops ordered to Canada, a discussion ensued during which the Earl of Clarendon, in reply to the speech of the Earl of Elgin, said that Great Britain had made the amplest apology to the United States in relation to the recruiting business, but could not consent to the recall of Mr. Crampton. That an offer had been made to that government to refer the Central American question to arbitration, but it had not been accepted. That Great Britain was animated by the most friendly feelings towards the United States, and this would be admitted by them. That, notwithstanding this, language had been used in Congress, which, if used in Great Britain, would have been denounced as tending to embroil the two countries; and finally, that if, as Lord Elgin had stated, five minutes' conversation between Mr. Marcy and himself would suffice to settle the business, he would willingly meet Mr. Marcy midway in the Atlantic. A rumor prevailed at London on the 21st ult., that Lord Elgin would be sent to Washington as Minister Plenipotentiary. Another rumor says Sir Henry Bulwer will be the Envoy. On the 29th, the Bank of England reduced the minimum rate of discount to five per cent. A new Russian loan for 100,000,000 silver roubles, at four per cent., is proposed. The money is said to be wanted for the construction of railroads in the interior, and for the capitalization of the South Dues. A letter from Berlin says that a strong party in Prussia are desirous of the government, instead of following the example of Russia and Sweden in regard to the capitalization of the Sound Dues, to wait and take the course adopted by the United States. The official journal of Vienna states that the tripartite treaty of April 15th, contains no secret articles, or none beyond those already published, and further, that that treaty was entered into by Austria, France and England, in consequence of the refusal of Russia and Prussia to subscribe to the guarantee of Turkish independence. Dr. Palmer, the poisoner, has been sentenced to death. The projects of the Joint Stock Company has been started at Liverpool, for the building of a railroad in Costa Rica, from Punta Arenas to the river Barancas. Russian engineers are surveying Sebastopol, which is to be entirely rebuilt on a new plan. The quarantine has been suspended at Odessa for four months. The Turkish government has refused to acknowledge the independence of Circassia. The Royal Geographical Society, of London, has awarded a gold medal to Dr. E. K. Kane, of Philadelphia, for his discoveries in the polar regions. The Italian question is unsettled. It is reported that the Pope proposes a Congress of the Italian Sovereigns, to assemble in Rome, in conjunction with the plenipotentiaries of France and Austria. Letters from all parts of Italy speak of the faint hopes entertained by the Italians of any reforms suggested by Austria. At Turin and Genoa, there have been disturbances in the streets. Exciting placards were affixed to the walls, and there were cries of "Death to Austria!" After a time the excitement subsided. The Neapolitan government has, in a diplomatic note, contested the representations which Count Cavour had made to the Paris Congress. The note professes to wish to expedite any wise measures of reform which would improve the condition of Italy. A small squadron of British ships has been ordered to cruise off Naples.

Liverpool Markets.—The sales of cotton for the week were 40,000 bales, and prices closed firm at previous quotations. Breadstuffs were dull, and with a declining tendency, but prices were unchanged.

London Market.—Money is easier. American stocks were dull and declining. Consols, 94¼ a 94¾.

UNITED STATES.—*Congress.*—In the Senate, Senator Hamlin excused from serving as chairman of the Committee on Commerce. He declared that he could no longer maintain his associations with the Democratic party, since the great moral and political wrong involved in the repeal of the Missouri Compromise, had been endorsed by the Cincinnati Convention. A resolution was submitted by Crittenden, of Kentucky, requesting the President, in view of the difficulties existing in Kansas, and the employment of the military force for the restoration of law, peace and harmony there, to send General Scott to take command of those forces. This measure he hoped would put an end to the prevailing anarchy. In the debate that ensued, it appeared the resolution did not command the favourable consideration of the Senate generally. On the 12th and 13th inst. Senator Butler delivered a long speech, in reply to that of Charles Sumner, which led to the assault upon him. Butler defended the outrage, saying, It was fortunate he was not here at the time, for he did not know what he might have done. To be sure it had been thirty or forty years since he had been engaged in personal conflicts, and his hand was out of practice. But he did not know but he might have had a trial at him. One thing he had no doubt of, namely, if he were a younger man he would have left Mr. Sumner in a worse condition than he is now. The speech throughout was marked by acrimony and vindictiveness. Senator Wilson made a dignified and spirited reply. On the 16th, Senator Clayton introduced a bill for the pacification of Kansas. It proposes to obliterate all that has been done in that territory, and provides for new and fair elections by the people, of a legislature. During the last week, the House of Representatives was mostly without a quorum, and no business done.

Kansas.—Howard and Sherman, of the Congressional Investigating Committee, arrived at St. Louis on the 12th, on their return to Washington. The testimony taken by them is said clearly to prove that of the five thousand five hundred votes given at the Legislative election in the Third month, 1855, only eleven hundred were cast by actual residents. A despatch forwarded from St. Louis on the 12th, says,—Ossawatomie, a Free State town, was sacked by a Georgia mob on the 6th inst. The printing-office was destroyed, houses were burned, sixteen horses were stolen, and the jewels were taken from ladies' ears and fingers. Palmyra has also been sacked, and robberies occur daily. Other accounts represent the state of the whole territory as truly deplorable. Nowhere was life or property safe, and robberies and assassinations were of common occurrence. The Free State men in the interior were in want of the necessaries of life, their cattle and provisions having been carried off by emigrants from Georgia and Alabama, who demanded them at the point of the bayonet. A Paris (Ky.) Citizen, a paper strongly devoted to southern interests, gives the following information as furnished by a friend just returned from the territory: "Mr. Sebree says that large numbers of Missourians are in the territory, and that the supply of them is only limited by the demand. His representation of the men who compose the body of the pro-slavery party and of their proceedings is not very flattering to them. He says that decent Southern men who go there under no undue excitement are ashamed of them, and he saw some such, whose minds on the subject of slavery in Kansas has undergone a complete change. The large company of Southern emigrants recruited in Alabama by Major Bufford, he represents as a miserable set of drunken loafers, many of whom have died in consequence of their vices and imprudence. Mr. Sebree says it is generally conceded, that of the actual citizens of the territory, two to one are in favour of a free State, and that with the exception of a comparatively small number of brawlers, they are quiet, industrious men, seeking to establish homes for themselves and their families. They have been outnumbered and outvoted by the people from the borders of Missouri, who have been organized for that purpose. These are unpalatable truths for Southern men, but the sooner the truth is known the better." Governor Shannon and Col. Sumner were exerting themselves to preserve order, and especially to prevent collisions between large bands of the opposing parties.

The Indians.—The operations against the Sioux have closed. The Indians delivered up twelve prisoners, horses, mules, &c., promising obedience to the government. Gen. Harney set the prisoners free after a few days' detention. In Oregon, the Indian war continued, with various success. Owing to the discharge of most of the volunteers on Columbia river, the country above the Dalles was mostly in possession of the Indians. In Southern Oregon, Gen. Lamerick, with a force of 250 volunteers, surrounded a party of Indians, and killed sixteen. At the mouth of Rogue river, a party of volunteers saw twelve Indians and their squaws fishing in a canoe, and killed them all, except one Indian and two squaws. In some instances, friendly Indians, including squaws and children, had been murdered by the whites with circumstances of peculiar atrocity. It has been fully ascertained that the reported murder, by Indians, in Florida, were in part at least the work of white men in disguise.

California.—The steamship George Law, from Aspinwall, brought nearly two millions in gold, and San Francisco dates to the 21st ult. An intense excitement had been occasioned at San Francisco, by Casey, a member of the Board of Supervisors, and the editor of the Sunday Times, shooting King, the editor of the Bulletin, in the street. After King's death on the 16th, the old Vigilance Committee called a meeting, and placards of an inflammatory nature were posted up, calling upon the citizens to take the law in their own hands. On the 18th, an organized force of 3000 citizens divided into divisions and companies, marched from the committee-rooms, and took possession of the jail. They took from thence Casey and a gambler named Cora, the murderer of Col. Richardson, and carried them to the committee-rooms, where they remained strongly guarded when the steamer sailed. As soon as the death of King was announced, the bells were tolled, the stores closed, all business suspe and the fronts of the buildings draped in mou Cora and Casey were both tried before a revoluti tribunal of twenty-nine jurors, and sentenced to be They were to be executed on the day following the eral of King. The murder of King grew out of a r paper quarrel.

Philadelphia.—Mortality last week, 159.

New York.—Mortality last week, 309. From the y report of the four prisons in the city of New York, i pears that the total number of commitments for the 1855 were 36,624, of which 27,338, or three-fourt the entire number, were foreigners.

Railroads.—The receipts of the Baltimore and road for the Fifth month, were $479,318; those o Pennsylvania railroad for the same period, were $453

Miscellaneous.—The Sugar crop in Louisiana.—planters in Plaquemine parish have ploughed up sugar and planted corn in its stead, and in Point Co the planters have all turned their attention to cotto year. They are in hopes of making seed cane, but think even that doubtful.

Freedom of the Press in Spain.—There are said t now, not less than ten editors of the Madrid papers i prison of the Saladero, besides others undergoing demnation in fortresses.

What it Costs.—The people of the United State gratuities to ocean mail steamers, pay about twic much as England pays for the same mail service. T are paid to two of the companies, viz., the New York California and the Collins, upwards of sixteen hun thousand dollars a year, while the receipts of postage both are only about one-third of the money paid to t

What England is Worth.—The material wealth of land is set down in value at £4,447,000,000. Its vated soil is valued at £1,700,000,000, its mines £ 000,000, its dwellings and factories at £450,000,000, cultural implements, live stock and manufactured g each over £200,000,000 and its mercantile shippi £40,000,000.

Navigation Extraordinary.—The Providence Jou says that the steamer W. T. Cushing, from Philadel to Chicago, arrived at Newport on Sunday. She goe way of the St. Lawrence and the Lakes. This ve we think, is without a precedent.

The Mount of Olives, near Jerusalem has been chased by a wealthy woman of the Hebrew persua the widow of a banker named Polack, of Konigst Prussia. She has planted the whole area with a g of Olive trees, and intends to beautify the place and prove the whole neighbourhood at her sole expense.

Shipwreck.—Loss of Seventy-two Lives.—A despatch been received at New York by the underwriters, sta that the ship Pallas was wrecked on the 30th of Fifth at St. Paul's Island, mouth of the St. Lawrence ri Seventy-two lives were lost.

Price of Fruit in London.—The following were the pr at Covent Garden market on the 24th ultimo:—Eng pine apples $2 to $3 per pound; hot house grapes $ to $4.50 per pound; melons 50c. to 88¾c. each; pea 50c. to $1.50 per dozen; strawberries 12c. to 25c. ounce; nectarines 37½c. to $1 per dozen; oranges $ to $3 per dozen; lemons 12c. to 25. per dozen.

The Sound Dues.—Secretary Marcy has formally si fied to the Danish Minister the purpose of the Presi not to make a forcible resistance to the collection of Sound Dues, at Elsinore, for one year from the 14th i

WEST-TOWN BOARDING-SCHOOL.

The Committee who have charge of the Board School at West-Town in accordance with autho given them by the late Yearly Meeting, have conclu to raise the price of board and tuition for each pu from forty dollars to *forty-five* dollars per session, to c mence with the winter session.

Those Friends within the limits of Philadelphia Ye Meeting, who intend sending their children to the Sch the next session, will please enter them before the la the Ninth month. Applications for admission are to made to Joseph Snowdon, Superintendent at the Sch or Joseph Scattergood, Treasurer, No. 84 Arch st., Ph Philad., Sixth mo. 10, 1856.

WANTED.

A Female Teacher is wanted for Friends' School Crosswicks, N. J. Early application may be made t JOEL H. MIDDLETON, Crosswicks, N. J., Or, SAMUEL ALLINSON, Jr., Yardville, N

MARRIED, on Fifth-day, 22d ult., at Friends' Meeti house, Westfield, N. J., CLARKSON SHEPPARD, of Gre wich, N. J., to LYDIA WARRINGTON, of the former plac

Mammoth Steamship.

(Continued from page 322.)

he manner in which this moving city rather than will be propelled with the speed of a locomotive gh the ocean is not the least noticeable of the gements connected with her. Brunel has, nink wisely, decided not to trust so precious a an freight and so vast an amount of valuable o to any single propelling power, but has sup- her with three—the screw, the paddle, and sail. Her paddle-wheels, 56 feet in diameter, be propelled by four engines, the cylinders of h are 6 feet 2 inches in diameter, and the stroke et. The motive power of these will be gene- l by four boilers. Enormous as are these en- , having a nominal power of 1000 horses, and ling nearly 50 feet high, they will be far in- r to those devoted to the screw. These, the st ever constructed for marine purposes, will pplied with steam by six boilers, working to a e of 1600 horses—the real strength of the com- d engines being equal to 3000 horses. When spectator looks upon the ponderous shaft of l, 160 feet in length and 60 tons in weight, ined to move the screw, and the screw itself of eet in diameter, the four fans of which, as they n the ground, remind him of the bladebones of e huge animal of the pre-Adamite world, he er comprehends the gigantic nature of the labour e done, and the ample means taken to perform As the screw and the paddles will both be king at the same time, the ship will be pulled pushed in its course like an invalid in a Bath r, and each power will be called upon to do its The calculated speed of the ship under steam xpected to average from fifteen to sixteen knots, nearly 20 miles an hour. We all know, even calm day, what a wind meets the face looking of a railway train going at that pace, and con- iently it can be understood that sails, except on raordinary occasions, would act rather as an diment than as an assistance to the ship's pro- s. It is not probable, therefore, that they will uch resorted to except for the purpose of steady- or of helping to steer her. In case, however, of rong wind arising, going more than twenty-five s an hour in the direction of her course, she is vided with seven masts, two of which are square- ed, and the whole spreading 6500 square yards canvas; she carries no bowsprit, and has no t sail. We do not know the reason of this de- parture from the ordinary rig, unless it be to avoid her ploughing too deeply in the sea. Her bow is also without a figurehead; and this peculiarity, together with her simple rig, gives her the appearance of a child's toy-boat. If beauty is nothing more than fitness, this form of bow is undoubtedly the most beautiful, and the Americans who have long adopted it in their trans-Atlantic steamers, are right; but to ordinary eyes it looks sadly inferior to the old figurehead projecting out before the ship, as if eager to lead her onward over the wave. Fewer hands will be required to navigate the "Great Eastern" than her size would seem to demand. Her whole crew will not exceed 400 men—a third of the number composing the crew of a three-decker. The difference is made up by what we may term *steam* sailors. There will be four auxiliary engines appointed to do the heavy work of the ship, such as heaving the anchors, pumping, and hoisting the sails; for the gigantic arm of steam will be imperatively called for to deal with the vast masses of iron and canvas required to move and to hold the ship. These engines will, in all probability, communicate their power to a shaft running through an aperture in the upper iron deck, by which arrangement motive power in any required quantity will be laid on from stem to stern of the ship.

It is obvious that some special means must be adopted to direct this vast mass of moving iron as she flies on her course, threatening by her speed, destruction to herself and whatever may cross her path in the great highway of nations. The usual contrivances will not apply. No speaking-trumpets, for instance, could make the captain on the bridge heard either by the helmsman, or the look-out at the bow, more than three hundred feet away. Even the engineer, sixty feet beneath him, would be beyond the reach of his voice. As in the railway, we have to deal with distances which necessitate the use of a telegraph, and the "Great Eastern," in this respect, will be treated just like a railway. On ordinary occasions a semaphore will, in the daytime, give the word to the helmsman, whilst at night, and in foggy weather, he will be signalled how to steer by a system of coloured lights. The electric telegraph will also be employed to communicate the captain's orders to him and to the engineer below.

Thus the nervous system, if we may so term it, of the vessel will be provided for. Starting from the bridge, or post of the commander, which leads directly from his apartments, located between the paddle boxes, the fine filaments will be extended to the helmsman at the stern and to the look-out at the bow, whilst a third thread will communicate with the engineer. By this means the captain, or brain of the ship, will be able in a moment to put in motion, to drive at full speed, to reverse the action, or to stop, the iron limbs which toil day and night far out of sight in the deep hold, or as instantly to direct the helm so as to alter the vessel's course.

In most iron vessels great precautions are taken to avoid the incorrectness to which the needle placed on deck is liable on account of the proximity of attractive masses of metal. The commonest expedient is to have placed high up in the mizenmast, beyond the influence of the iron sides of the ship, what is called a standard compass, and which may be said to realize Dibdin's "Sweet little cherub who sits up aloft, and takes care of the life of poor Jack." In the "Great Eastern," a special stage or framework will be erected for this dainty Ariel, at least forty feet in height, and the helmsman will probably either read off the points from above as they appear through a transparent card illuminated like a clock-front, or the shadow of the trembling needle will be projected down a long pipe upon a card below, so as to avoid the necessity of the helmsman looking up, and to obviate the difficulty which would occur in foggy weather. The experiments with respect to this important adjunct to the ship are not yet concluded, however, and we must be considered to speak speculatively as to the plan which is likely to be adopted.

The anchors of this mighty steamer would, with their accessories, alone form the cargo of a good-sized ship. The ten anchors with which she will be fitted, together with their stocks, will weigh fifty-five tons. If we add to this ninety-eight tons for her eight hundred fathoms of chain-cable, and one hundred tons for her capstans and warps, we shall have a total weight of two hundred and fifty-three tons of material dedicated to the sole purpose of making fast the ship.

It was prophesied that Brunel's first ship, the "Great Western," would be doubled up as she rested upon the crests of the Atlantic's waves, and we all know how the prophecy was fulfilled. When it was made, indeed, we were very much in the dark as to the size of ocean waves, and it was not until the introduction of long steamers that they could be measured with any accuracy. Dr. Scoresby, whilst crossing the Atlantic in one of the Cunard boats, some years since, closely observed the waves, and by means of the known length of the ship, was enabled to form a pretty accurate idea, of their dimensions. The old vague account of their being "mountains high" was well known before that time to be an exaggeration; but we do not think even philosophers were prepared for the statement made by this observer at a meeting, some years since, of the British Association, that they averaged no more than twenty feet in altitude and rarely exceeded twenty-eight feet. The popular impression principally produced by marine painters that waves formed valleys thousands of yards across, down the sides of which ships slid as though they were about to be engulphed, seems to have been equally erroneous; as the maximum length of ocean waves, according to Dr. Scoresby, is six hundred feet; whilst in a moderate gale they are only three hundred, and in a fresh sea about a hundred and twenty feet in length. A moment's consideration of these facts leads to the conclusion that long ships must have a great advantage over short ones with respect to the rapidity with which they make their journey, as it is quite evident that whilst the latter have to perform their voyages by making a series of short curves—much to the impediment of their progress and to the discomfort of their inmates—the former, by ruling the waves with their commanding proportions, make shorter and smoother passages. As

steamers grow larger and larger, the cause of seasickness must therefore gradually diminish. The "Great Eastern," from her length and the bearing which she will have upon the water, being a paddle as well as a screw ship, will, in all probability, neither pitch nor roll, and will therefore be most comfortable to the voyager. Her immense stride, if we may use the term, will enable her to take three of the three hundred-feet waves of an Atlantic gale as easily as a racer would take a moderate-sized brook. She will still have to encounter the six hundred feet waves of storms, and there may be those mistrusting her length and the great weight she will carry amidships, in the shape of engines and coal, who may be inclined to repeat with respect to her the prophecy which was made with respect to the "Great Western." Brunel, by the method of launching which he intends to adopt, will, however, set these misgivings at rest before she even touches the water. Although the total weight of the ship, together with her engines, which will be erected in her whilst she is still on land, cannot be less than twelve thousand tons, she will rest entirely on two points as she enters the water broadside on. No statement could give a more powerful idea of the strength of her fabric.

The reasons which have induced Brunel to adopt this method of launching are given as follows in his report:

"Launching is generally effected by building the ship on an inclined plane, which experience has determined should be at an inclination of about 1 in 12 to 1 in 15, the keel of the ship being laid at that angle, and the head consequently raised above the stern say 1–15th of the whole length of the ship. In the present case this would have involved raising the fore part of the keel or the forefoot about forty feet in the air, and the forecastle would have been nearly 100 feet from the ground, the whole vessel would have been on an average twenty-two feet higher than if built on an even keel.

"The inconvenience and cost of building at such a great height above ground may be easily imagined, but another difficulty presented itself which almost amounted to an impossibility, and which has been sensibly felt with the larger vessels hitherto launched, and will probably, ere long, prevent launching longitudinally vessels of great length. The angle required for the inclined plane to ensure the vessel moving by gravity being, say 1 in 14, or even if diminished by improved construction in ways to 1 in 25, is such, that the end first immersed would become waterborne, or would require a very great depth of water before the fore part of the ship would even reach the water's edge. Vessels of 450 or 500 feet in length would be difficult to launch in the Thames, unless kept as light as possible; but our ship could not be so launched, the heel of the sternpost being required to be, as I before said, about forty feet below the level of the fore foot; some mitigation of the difficulty might be obtained by an improved construction of the ways; but the great length of ways to be carried out into the river would, under any circumstances, be a serious difficulty.

"These considerations led me to examine into the practicability of launching or lowering the vessel sideways; and I found that such a mode would be attended with every advantage, and, so far as I can see, it involves no countervailing disadvantages. This plan has been accordingly determined upon, and the vessel is building parallel to the river, and in such a position as to admit of the easy construction of an inclined plane at the proper angle down to low-water mark.

"In constructing the foundation of the floor on which the ship is being built, provision is made at two points to ensure sufficient strength to bear the whole weight of the ship when completed. At these two points, when the launching has to be effected, two cradles will be introduced, and the whole will probably be lowered down gradually to low water-mark, whence, on the ensuing tide, the vessel will be floated off. The operation may thus be performed as slowly as may be found convenient; or if, upon further consideration, more rapid launching should be thought preferable, it may be adopted."

(To be continued.)

Epistle of George Fox.

About this time I was moved to give forth the following exhortation to Friends in the ministry:—

Friends,—In the power of life and wisdom, and dread of the Lord God of life, and heaven and earth, dwell; that in the wisdom of God over all, ye may be preserved, and be a terror to all the adversaries of God, and a dread, answering that of God in them all, spreading the truth, awakening the witness, confounding deceit, gathering out of transgression into the life, the covenant of light and peace with God. Let all nations hear the sound by word or writing. Spare no place, spare no tongue, nor pen; but be obedient to the Lord God; go through the work; be valiant for the truth upon earth; and tread and trample upon all that is contrary. Ye have the power, do not abuse it; and strength and presence of the Lord; eye it and the wisdom; that with it you may all be ordered to the glory of the Lord God. Keep in the dominion; keep in the power over all deceit; tread over them in that which lets you see to the world's end, and the uttermost parts of the earth. Reign and rule with Christ, whose sceptre and throne are now set up, whose dominion is over all to the ends of the earth; whose dominion is an everlasting dominion; whose throne is an everlasting throne; whose kingdom is an everlasting kingdom; and whose power is above all powers. Therefore, this is the word of the Lord God to you all; keep in the word of God, that spreads over all the earth; the wisdom of the creation that is pure from above, not destructive. For now shall salvation go out of Zion, to judge the mount of Esau; and now shall the law go forth from Jerusalem, to answer the principle of God in all; to hew down all inventors and inventions. For all the princes of the earth are but as air to the power of the Lord God, which you are in, and have tasted of; therefore live in it; this is the word of the Lord God to you all, do not abuse it; keep down and low; and take heed of false joys that will change.

Bring all into the worship of God. Plough up the fallow ground; thrash and get out the corn; that the seed, the wheat, may be gathered into the barn, that to the beginning all people may come, to Christ, who was before the world was made. For the chaff is come upon the wheat by transgression; he that treadeth it out is out of transgression, and fathoms transgression; puts a difference between the precious and the vile; and can pick out the wheat from the tares, and gather into the garner; so brings to the lively hope, the immortal soul unto God, out of which it came. None worship God but who come to the principle of God, which they have transgressed. None are ploughed up but he who comes to the principle of God in him that he hath transgressed. Then he doth service to God; then is the planting and the watering; and the increase from God cometh. So the ministers of the Spirit, must minister to the Spirit that is in prison, which hath been in captivity in every one; that with the Spirit of Christ, people may be led out of captivity up to God, the Father of Spirits, do service to him, and have unity with him, with the Scriptures, and one with another. This is the word of the Lord God to you all, a charge to you all, in the presence of the living G be patterns, be examples in all your countries, pla islands, nations, wherever you come; that your riage and life may preach among all sorts of pe and to them; then you will come to walk cheerf over the world, answering that of God in every c whereby in them ye may be a blessing, and m the witness of God in them to bless you; then the Lord God you will be a sweet savour an blessing.

Spare no deceit. Lay the sword upon it; go i it. Keep yourselves clear of the blood of all r either by word or writing; and keep yourse clean, that you may stand in your throne, and ev one have his lot, and stand in the lot in the Ane of Days. The blessing of the Lord be with y and keep you over all the idolatrous worships worshippers. Let them know the living God; teachings, churches, worships, set up by m earthly understanding, knowledge and will, mus thrown down by the power of the Lord God. this must be overthrown by that which gave f the Scripture; and who are in that, reign ove all; that is the word of the Lord God to you In that is God worshipped, that brings to dee his will; and brings to the church in God, ground and pillar of truth; for now has the mig day of the Lord appeared, and the arrows of Almighty are gone forth, which shall stick in hearts of the wicked. Now will I arise, saith Lord God Almighty, to trample and thunder d deceit, which hath long reigned and stained earth; now will I have my glory out of ev one. The Lord God Almighty over all in strength and power keep you to his glory, that may come to answer that of God in every one. I claim the mighty day of the Lord of fire and sw who will be worshipped in spirit and in truth; keep in the life and power of the Lord God, the inhabitants of the earth may tremble be God; that the Lord's power and majesty may admired among the hypocrites and heathen, ye in the wisdom, dread, life, terror and domin preserved to his glory, that nothing may rule reign but power and life itself; and in the wisd of God, ye may be preserved in it. This is the w of the Lord God to you all. The call is now of transgression; the Spirit bids "come." The is now from all false worships and gods, and f all inventions and dead works, to serve the li God. The call is to repentance, to amendmen life, whereby righteousness may be brought fo which shall go throughout the earth. Therefore that are chosen and faithful, who are with the La go through your work faithfully and in the stren and power of the Lord; and be obedient to power, for that will save you out of the hand unreasonable men, and preserve you over the w to himself. Hereby you may live in the kingd that stands in power, which hath no end; wi glory and life are. 1656. G. F

Submarine Blasting.—An effort is being m by means of submarine blasting, to remove "I mond Reef" from New York harbour, it l directly in the route of the south-ferry boats, r Governor's Island. The rock is 300 by 40 and very hard. The depth of water over it is sixteen feet at low tide; it is stipulated that shall be increased to twenty-two feet, at a co the city of $35,600. Eight to ten enoru charges are fired per day, and a large numbe fish is killed with every blast. By the expan force of the explosion, the large mass of w above and around must be instantly removed lifted. But the motion of all matter requires t

expansive force is exerted instantly in every
ion. It will not willingly wait for the slow
of the mass of water high enough to afford it
It therefore makes its way at the same
downward upon the solid rock, crushing,
ling and grinding it to pieces. All matter,
as we know, is porous and compressible, and
are more compressible than water. Philo-
should, therefore, teach us that a sudden
sive force between a body of water and a
of rock, while it requires time to remove the
, must necessarily, to some extent, crush the
e of the rock, if it is too large or too confined
removed in a body. And this has been proved
a fact by every blast that has been made.
explosive force being exerted vertically, and
ward, no fragments of rock are driven above
rface of the water. Most of the rock is pul-
ed; all the larger pieces are removed by
s or by grappling irons, to the deepest sur-
ling water, which is from thirty to forty feet.—

BIOGRAPHICAL SKETCHES,

inisters and Elders, and other concerned mem-
bers of the Yearly Meeting of Philadelphia.

(Continued from page 325.)

MARGARET ELLIS.

argaret Humphrey was born in Wales a few
before 1650. She was a seeker after good
s in her youth, and as she grew in years, be-
nvited to a meeting of Friends, she was fa-
ed to experience therein the visitation of the
's Holy Spirit, and such a sense of his good-
and love, as that the very remembrance thereof
kened in her in advanced age, gratitude and
e. She became convinced of the Truth as held
Friends, and with divers of her own family
d herself to them.

bout the year 1675, she was married to Row-
Ellis, a valuable Friend, who, although her
r in age, and but recently convinced of the
h, was already in esteem as one not only capa-
f defending the faith he professed, but as being
g patiently to suffer in its support. We have
dy had occasion to relate in the account of
land Ellis, their removal to this country. We
now add her husband's testimony concerning
written about two weeks before her death.

Being much inclined to leave something in
ory of my dear wife, Margaret Ellis, who was
dear to me and my children, I may justly
she attained to a good old age, and that we
together about fifty-two years with a great
of satisfaction. Although we waded through
y troubles of divers kinds, yet we still found a
t hand to support us; and we who were most
ersant with her, from good experience can say,
ived and died in true unity and fellowship with
ds of Truth, since she was convinced thereof,
more especially in the afternoon of her day,
n her candle shone brighter and brighter to the
to our comfort and encouragement, as appears
he following account.

ROWLAND ELLIS."

"Plymouth, in the County of Philadelphia,
ennsylvania, the 8th of the Sixth month, 1731."

Margaret Ellis, wife of Rowland Ellis, of Penn-
ania, for about the last ten years of her life,
deprived of her eyesight, which she had a
e of about a year before. On a certain time,
t of the family being gone to the meeting, some
asiness took hold of her mind for neglecting the
ortunity, apprehending the time might soon
e up onher when she would not be able to at-
tend and enjoy those precious times. So the next meeting-day she went on foot with a willing mind though some miles distant, at the age of seventy-five years, continuing very diligent. Being deprived of her eyesight, and attended with the infirmities of old age, yet she appeared contented in mind, though deprived of what she much desired, the company of Friends at religious meeting. Her love [for meetings] did not decline, for, whatever would fall in the way, she would encourage her family, as many as were able, to go to them at all opportunities. [She also would encourage the family] to sit down together, and at times had a word to speak amongst them of what the Lord had done for her soul.

"She often spoke to Friends, who came to visit her, of the benefit she had received in meetings, and [desired] that they might not easily neglect such opportunities through the care and cumber of this world, which she was sensible choked the seed the good husbandman had sown. She was affected with the [love shown by the] visits of her friends, saying at one time, 'With what manner of love hath the Father loved us!' Surely, this is that, which Christ left with his disciples as their badge; when this is enjoyed it unites, and brings us near to himself and one another. She encouraged a friend, who had a few words in meetings, to faithfulness, saying, 'Hide not thy talent in the earth, because it seems to thee but small; but press on in the way of faith, and, though it seems to thee as a time of night, the day will break upon thee; as thou remainest faithful, thy talent will be increased.' She said to some that wept, 'Do not mourn for me, for I find my Redeemer is near me, and opens the way, so that I have nothing to do but patiently undergo whatever he may be pleased to suffer.' Her spirit being raised above her bodily weakness, she admired the love and goodness of God to her soul.

"At another time, a friend coming to visit her, she signified that the day before, the low condition of Ruth came before her, when she came with her mother-in-law from Moab to Bethlehem, and went into the fields to glean, and happening in the field of Boaz, she found favour, and was kindly received, and to make her earnings the better, was admitted to glean among the sheaves, the reapers being directed to let fall handsful for her, inviting her to sit at meat with them, and by degrees she came to be the wife of Boaz. These remarks she made in great tenderness of spirit before the Lord, in a sense of his goodness to them that came to hope under the shadow of his wing. She compared this to her [own] convincement, when she came first among Friends in their religious meetings. She said, 'I was kindly received, and invited to sit down amongst them, and partake with them of God's goodness, to which at that time I was but a stranger; yet the Lord in his love and care made himself known to my soul, and suffered me to sit down with his harvest men; meaning the ministers of the gospel of Jesus Christ, whose company she highly valued and prized. She showed an humble sense of the mercies and loving kindness of God to her all her life long, and now more than ever; 'for,' added she, 'he is gathering me to himself, where I shall rest with kings and princes, with God, and holy saints and angels, with Jesus Christ, my Saviour and holy Redeemer, being passing out of this world to live for ever.'

"In the time of her sickness, which was long and tedious, she made observations on Joseph's condition when in prison. 'He had,' said she, 'the favour of the keeper, the care, the love, the goodwill of the prisoners, but all this wrought not Joseph's deliverance. He was to stay the Lord's time, and so must I. For though I have the love of my friends, a kind husband, loving and tender children, that are careful of me, and all other things needful, yet I long to be freed from this mortal part, which keeps the soul as in prison; yet am waiting the Lord's time, which is the best, and hope shall be content.' Some friends from North Wales coming to visit her, though very weak, she rejoiced much, saying, 'I little thought this morning I should have had this opportunity with any of you, but all was well; for I find nothing to stand in my way.' Answer was made, 'that is better than all the world.' 'I know it will;' she said, 'in this my sickness; for had I not endeavoured to keep a conscience void of offence towards God and man, it would have been too hard a task for me now in this my great weakness. I made it my concern when night came, to lay my head upon the pillow, to look over my day's work, and take a view of my own heart, lest there should be anything the Lord had a controversy with; that when the midnight cry came, I might be ready to enter into the bride-chamber, having the wedding garment. Let all strive to have their accounts ready, for I can tell you without boasting, it is an excellent thing to have our lamps trimmed, that we may enter into the heavenly rest;' adding, 'Remember my dear love in the Lord Jesus to all friends, who may inquire for me, and tell them that as my care has been to live in his fear, my hope is to die in his favour.'

"Some Friends of the city of Philadelphia visiting her, rejoiced to find one of her age retain her senses so well, but more especially her greenness and tenderness. She told them the consideration of Friends in the city came fresh in her mind, the elders [being] mostly removed. She said, 'You that are coming up in their places, stand faithful for the truth in that which is made manifest to you. Look not at your own weakness, and how short you are of the first rank that went before. Be not discouraged in coming up on the Lord's service. He will endue you with strength and wisdom to carry on his own work to the honour of his name. Remember the zeal of Phineas, when he executed judgment upon the transgressors, whereupon the plague was stayed; and how great was his reward! For the Lord said to Moses, Phineas hath turned away my wrath from Israel, so that I have not consumed them in mine anger; therefore I will give unto him my covenant of peace.' She added, 'I am glad to hear a good report of you; the Lord preserve you.' On parting with them, she signified her great love to faithful Friends.

"At another time, sitting with the family, though very weak, she said, 'You are young and strong, in the prime of your time, judgment, and understanding; improve your talents; that is the way to be helpful to your aged parents. As for me, I question whether ever I shall have the like opportunity with you. It is my desire you may follow on to know and witness the truth more and more. Let not the manna gathered yesterday suffice you for to-day, so will you come to know substance in yourselves, and strength towards God. Be careful of your aged father, and helpful to him in his declining years; he is weak and feeble, and easily cast down too low: the Lord grant he may be so strong as to run the race with patience.'

"A great concern was often on her mind, lest too much liberty should creep into the church, and thereby mar the beauty of Zion, and cause her excellent name to be a scorn to the heathen. 'Oh! that her ministers may be faithful, lest they give occasion to open the eye in many that watch for more liberty, and that they may be careful in all things, both in word and deed.' The day she died, her children being about her, it was asked if she

had anything further to tell them. She answered, 'I have spoken to you whilst I had strength and words given me, what shall I say more? You have the anointing, the spirit of Truth, which will lead you into all truth! Hearing her younger daughter weep, she said, 'Where is thy resigning me up, as thou didst this morning? Is thy faith weakened so soon? Get hold of him, who in the time of great exercise hath supported thee, and he will do the same again! About an hour before she departed, she asked what time of the night it was. It was answered, about eleven o'clock. 'From twelve till break of day I usually had my bad fits,' she said, 'and by and by I shall rest quiet and easy with my Saviour.' Some refreshment being offered her, she said, 'No more of the fruit of the vine! no more forever!' So, desiring their prayers for her short passage, she stretched herself out, and lifting up her hands, committed her soul to God."

(To be continued.)

For "The Friend."

Silent Worship.

I would that we as a society, were more awakened to the importance of this religious duty. The apostle enjoined his fellow believers to present their bodies a living sacrifice, holy and acceptable unto God. Did we but rightly appreciate the privilege of being through mercy enabled to perform this reasonable duty unmolested, I think that the cumbering things of this world, would seldom if ever prevent us from timely assembling with our friends both on First, and week-days, there to wait in the silence of all flesh, before Him who sees and knows the bent and intent of every heart, and will reward acording to our motive to action.

May none of us be satisfied with a superficial attendance, though it may be in a manner seemingly consistent with our profession. God is a spirit, and they that worship Him, must worship Him in spirit and in truth, for the Father seeketh such to worship Him. And as the eye of the mind is singly turned to Him for counsel and direction, he will enable the seeking souls at times to return, bringing their sheaves with them, though their assemblies may have been small and silent. But oh! the lukewarmness, that prevails with many. If they were but sensible of the danger that surrounds us both as a society, and individually, surely they could not slumber away the time set apart for the purpose of divine worship, nor set as it were at ease in Zion, nor trust to a profession of religion. May all who are as stumbling blocks, in this respect, examine themselves by the light of Christ in their own consciences, and as they prize their own eternal welfare and the welfare of society (that is disgraced by the unbecoming and benumbing practice) earnestly endeavour to know the cause. Surely, my beloved friends, is there not a cause? Has not the world and the things of it engrossed too much of your time and attention, or has not the lust of the world, the lust of the eye, and the pride of life estranged you, by almost imperceptible degrees, from the restraints of the cross? Have you been concerned above all things to seek the one thing needful, even that of sitting as at the feet of Jesus to hear his words? May you be awakened to a sense of the danger that awaits you. Give not sleep to your eyes nor slumber to your eyelids, but seek with increasing earnestness to *know the cause*, and be willing to *remove it whatever it may cost you*. Take away the cause and the effect will cease. Be sober, be vigilant, for your adversary is still seeking whom he may devour. That you may be delivered from him and find forgiveness through his mercy, that willeth not the death of a sinner, and who alone is able to give you the victory, is the desire of one that loves you, and earnestly craves that sleeping in our religious meetings may no longer be a stumbling block to honest inquirers, but that we may through individual faithfulness become as a city set on a hill that cannot be hid.

Ohio, Sixth month 10th, 1856.

"*Bearing False Witness.*"—If a witness, summoned to testify in open court, swears falsely, he may be convicted of perjury and immured in the State prison. Even if he escapes the vengeance of the law, be becomes a marked man among his fellows. The perjurer is a public scorn and detestation. Like Cain, he goes forth with the brand upon his forehead.

But there are other methods of bearing false witness, besides testifying in a Court of Justice. Whenever facts are distorted, character assailed, or motives misrepresented, false witness is borne as effectually as though the liar stood in open Court, with his hand upon the Bible. The law does not, indeed, make slander a penal crime, and it is wise in this refusal, for the offence is one peculiarly hard to reach, nay, almost impossible. Even in civil suits for slander, this practical difficulty is felt by court and jury alike. But the wrong is none the less a wrong, because of its immunity from earthly tribunals. And the Decalogue, in hurling its thunders against breaches of the moral law, denounces slander as pointedly as it does perjury in the public courts, when it anathematizes "bearing false witness."

Yet we see continually the most glaring breaches of this great maxim of ethics. Even otherwise good men, especially if ardent in what they believe to be a reform, are not free from the guilt of false-witness. Carried away by their zeal, they often impute the worst motives to their opponents; frequently ignore important facts; accept statistical statements without sifting them; and in other ways traduce the characters of men, as individuals or a class, and blacken unjustly a party which is in hostility to their own. Not that they always intend to do all this. The habit of exaggeration sometimes carries them to lengths which, in their calmer moments, and if they could see the evil they have caused, they would be the first to deplore. But occasionally they really mean to exhaust invective, in the hope to render their opponents hateful. Blinded to everything but one narrow view of a question by their intense sympathy for the oppressed, the suffering, or the erring, they stigmatize those from whom they differ, as man-stealers, or murderers, or both. They forget that men are not fiends, and paint all mankind, but themselves, as devils. Is not this "bearing false-witness?"

You, who accuse your neighbour of being miserly, when, if you knew all, you would find he was practising a necessary economy, you also are "bearing false witness." You, fair innocent, as you are called, "bear false witness" when you hint cruel things against a sister woman, of whom you really know nothing. You, who whisper about among your acquaintances, that this family is extravagant, or that man intemperate, that such a husband neglects his wife, or such a wife does not love a husband, you too "bear false witness," nay, commit perjury itself, perjury before the high court of heaven, and in the presence of the great judge of all. Whoever speaks what he or she does not know to be true, whoever even colours facts uncharitably, is guilty of "false witness." Tremble, dainty lady, who think yourself free from all guile; for do you not sometimes "bear false witness?" Tremble, proud moralist, for often you "bear false witness," and oftenest, perhaps, when you anathematize vice.

Men cannot study charity too carefully—in word, in deed, in look. It is better to be too lenient than too severe. A wrong done, "by false witness," we we can rarely remedy. But forbearance, even towards an animal, never leaves behind the sting remorse.—*Ledger.*

For "The Friend

Whoso offereth praise glorifieth me.—Psal. l. 23

No one need to be told that the surest metho obtain new favours from an earthly benefacto to be thankful for those which he has already stowed. It is the same with respect to our Heav Benefactor. Praise and thanksgiving are ever r prevailing than sacrifices or prayers. I have an account of a Christian who was shipwrecke a desolate island, whilst all his companions peri in the waves. In this situation he spent many in fasting and prayer that God would open a for his deliverance; but his prayers received answer. At length, musing on the goodness of in preserving him from the dangers of the sea returned thanksgiving and praise for this and favours; for he then felt, when his heart was ed with gratitude, that *many* favours *undese* had been bestowed upon him. Before the clusion of the day a vessel arrived, which rest him to his country and friends.

THE FRIEND.

SIXTH MONTH 28, 1856.

LONDON YEARLY MEETING.

The Sixth month number of the British Fr which we received by the Steamer America, is cipally occupied with accounts of different Ye Meetings. That given of the proceedings of don Yearly Meeting we shall give in full, kno the interest taken in the subject by our rea The meeting of Ministers and Elders is represe to have been attended by about the usual num One Friend "in returning the certificates gra him to travel last year in company with wife" proceeded "to give a lengthened accou their journey, which extended to within the A circle." Some account was also rendered by ano Friend of his religious labours chiefly within Southern hemisphere.

"On third day morning, our friend, Priscilla Gr spread before the meeting her concern to Friends in America. Unity and sympathy expressed very much at large by many Frie liberty for which was considerably extended, led to a suitable record." At the adjourned ing held on the evening of Seventh day the 31 certificate for P. Green was brought in and "dially approved;" it "appropriately described feeling into which the meeting had been in duced, and it might be said reintroduced, by re of the delicate health and more than usual c to sympathy" of this Friend.

"*Fourth-day morning 5th Month*, 21*st*, 1 —The first sitting was held at ten o'clock, and th tendance was considered fully an average Soon after settling into quietness, a Friend in ministry quoted the text in Isaiah, 'Thou wilt him in perfect peace, whose mind is stayed on t following it with the injunction of an apostle, careful for nothing, but in everything by pr and supplication with thanksgiving, let your quests be made known unto God. And the p of God which passeth all understanding, shall your hearts and minds through Christ Jesus.' T precious promises from both the Old and Testament, he observed, were applicable to u dividually, and in our families; and they were less words of comfort for us in our capacity a household of faith. Two Friends then follo each other in supplication. Another revived th

on, 'Draw nigh to God, and he will draw o you,' and observed, that though this was meeting for worship, yet it ought to be our our to observe this injunction in these our gs for transacting the affairs of the church; uld we be enabled to make the grateful ac- edgment, that it had been good for us to be

Another desired to remind Friends that our ency for every good word and work was of and he trusted it would be the secret breath- f our hearts, 'Be thou my strong habitation unto I may continually resort.'

anksgiving and supplication followed, and y after, Joseph Thorp, the clerk of last Yearly ng, read the opening minute. The calling f the names of the representatives, the first of ual routine business, was gone through, and ewer exceptions than usual (four only we be- they answered to their names. For the ab- of these four, satisfactory reasons were as- d.

er some other appointments had been read, a d said he had to propose an alteration in the of procedure with the business of the meet- iz., to postpone the reading of the foreign s till the answers to the queries had been

This, he observed, had been the customary of proceeding, until there seemed ground for ting from it a number of years ago; but he ht there would be an advantage in recurring previous practice, as he had just proposed. d no wish to provoke discussion, and he had ng so much at heart as to see the business of neeting conducted in the most advantageous ner. A number of Friends expressing approval at had been suggested, and no objection being d, the answers to the queries were accordingly o, and were overtaken as far as Essex, previous e adjournment about 1 P. M.

fter the reading of the answers from Cornwall, timony was produced and read, in behalf of ate Sarah Rundell, of Liskeard.

the answers thus far, there appeared to be no- particularly differing from other years, except aps, that the exceptions struck us as being fully numerous, in regard to the attendance of meet- for worship. The explanations called for, ever, in reference to these and other points, ed satisfactory to the meeting. The numbers d to our Society in the course of the year, on ground of convincement, we thought larger than ome former occasions. In Bristol and Somer- Quarterly Meeting, there had been six indi- als joined; in Cornwall, one; Cumberland and humberland, four; and Essex, three. The ing of the accounts of sufferings was also post- d to the conclusion of the answers to the queries. few words from a ministering Friend, while clerk was preparing the minute of adjournment, a very solemnizing influence upon the meeting. said he felt thankful in having been permitted el at our gathering together—and he had no bt it was the case that many more, in like man- had been favoured to feel—the overshading of heavenly Father's love; and he was desirous should endeavour to cherish this feeling through- even till the close of our meetings.

Fourth-day Afternoon.—Met at four o'clock. The representatives having drawn together, as di- ed at the close of the former sitting, to consider suitable Friend for clerk, and two for assistants, cluded to propose Joseph Thorp for clerk, and bert Forster and Robert Charleton as assistants; ch conclusion Joseph Pease was requested to mate to the Yearly Meeting. This he did ac- dingly; and the Friends proposed being accept- e to the meeting, their nomination was recorded.

The answers to the queries were then further proceeded with, commencing with those from Kent. It appeared from this meeting's answer to the 'query to Quarterly Meetings only,' that it felt itself incapable of giving to its Monthly Meetings such assistance as its place in the body and their state required. This confession of weakness led to a consideration of what was the duty of the Yearly Meeting in the case. Though it could not be said to be a direct application for assistance, yet the confession of weakness was taken as evidence that help from the Yearly Meeting was requisite, and would be acceptable; it was therefore agreed to appoint a committee to visit the Quarterly Meeting of Kent, with the view of rendering it such assistance as the Friends on the appointment might be enabled to give. They were also encouraged, should way open for it, to consider if, by the junction of Kent with some adjoining Quarterly Meeting, or by some other means, the necessity for the recurrence of a similar application could be obviated. The Friends appointed on this service are Daniel Pryor Hack, Thomas Chalk, John Marsh (of Dorking,) Robert Forster, and Rickman Godlee.

A testimony from Rochester Monthly Meeting, on behalf of Benjamin Bishop, was then read.

From the Quarterly Meeting of Lancashire and Cheshire, the answer to the seventh query seemed unusually loaded with exceptions. Among these, the six cases of shooting led to protracted remark. The discussion at length terminated by the clerk reading an extract from the *Rules of Discipline* to the effect, that 'shooting for diversion,' was clearly ranked among 'vain sports;' and it became the duty of subordinate meetings to determine what cases of this kind constituted exceptions to the query under consideration.

In reference to persons joining our Society on the ground of convincement, there appeared to have been five cases in this Quarterly Meeting.

When the clerk was about to proceed with the answers from Lincolnshire, he was interrupted by a Friend calling attention to the answer from Lancashire and Cheshire to the third query, which represented that Friends were preserved in love, one towards another. It was stated to be matter of notoriety that this was not the case. A number of Friends corroborated this statement, and told how painful it had felt to them to sit and hear such an answer. The object of those impugning the verity of the Quarterly Meeting, seemed to be to get the Yearly Meeting to take cognizance of the matter, as they seemed to think there was no other way of reaching the case.

The clerk followed the first speaker, demurring as to the Yearly Meeting being the place for individuals to bring such accusations. He was supported in this view, it may be said, by those most acquainted with the discipline and usages of the Society, who showed clearly that it was entirely out of order to bring forward, in this place, such an impeachment, while the course dictated by our rules was as explicitly stated. It appeared, from the statements of several of the representatives from Lancashire and Cheshire, that no exception came before the Quarterly Meeting; so that it could not return an answer different to what it had done. It was at one time proposed that the representatives from the Quarterly Meeting should draw together to the clerk's table at the close of the sitting, together with the overseers in the Monthly or particular Meeting in which the case constituting the supposed exception existed. But this was not to be understood as the dictate of the Yearly Meeting, but a voluntary and friendly action on the part of such representatives, with the view of conferring with such as chose to come forward and ask for explanations, in regard to the answer. This matter took up a considerable time, but thus disposed of, the answers from Lincolnshire were read, followed by a testimony from the Monthly Meeting of Spalding and Wainfleet, on behalf of John Hurst, deceased. This was a very instructive document, as also the testimony for Benjamin Bishop; and a number of Friends spoke in confirmation of their contents, and expressive of their high value for the departed.

The reading of the answers from London and Middlesex finished the business of this sitting. Adjourned till to-morrow morning, at ten o'clock.

Fifth-day morning, 5th Month, 22d.—Met at ten.

After the clerk had read the opening minute, William Tanner laid before Friends a concern to pay a visit to the Women's Yearly Meeting, should there be no objection. Unity being expressed with the proposal, he was accordingly liberated, and John Marsh and Joseph Eaton accompanied him.

A testimony from Kingston Monthly Meeting was then read, on behalf of our late valued Friend, Richard Barrett, of Croydon. Many Friends, some of them at considerable length, testified their sense of the worth of the deceased, and of his instructive example. We scarcely remember any similar document eliciting a greater amount of expression of unity and concurrence; while occasion was taken by several of the speakers, to encourage those yet in younger years, to a like early dedication of heart, and submission to the restraining and constraining influences of Divine grace.

Resumed the further reading of the answers to the queries. After those for Norfolk and Norwich, came another testimony, viz., for Anna Forster, which was both interesting and instructive. Two or more Friends gave expression to the affectionate regard which they had entertained for the deceased. The remarks of one speaker, in particular, appeared especially sound and satisfactory. The language of our blessed Lord and Saviour had much impressed him at this time—'He that hath my commandments and keepeth them, he it is that loveth me, and he that loveth me shall be loved by my Father, and we will come unto him, and make our abode with him.' Notwithstanding what man is capable of attaining to, as man, in the cultivation of his intellect, or in the acquirement of what may be termed religious information, it appeared very clear to the speaker that it is not the *truths* of religion that convert the soul, but the operation of the Power of Truth in and upon the heart. Our dear Lord said to the Jews, 'Search the Scriptures; for in them ye think ye have eternal life, and they are they which testify of me. And ye will not come unto *me* that ye might have life.' And hence it is, that although these things may be, and are at times conducive to that end, yet we must come under the influence of the power and Spirit of Christ in the heart, in order to partake of his salvation. There was nothing he believed, that man can do of *himself* that will render him acceptable in the Divine sight; and it remains a living truth, that 'the sacrifices of God are a broken spirit, a broken and a contrite heart, O God, thou wilt not despise,' and on this very ground, that the Lord alone can prepare the soul to offer it unto Him.

Overtook the answers as far as Yorkshire, at this sitting. In most of the meetings, there appeared to have been some small additions to the Society on the ground of convincement. In Westmoreland, four cases; Yorkshire, eleven. Respecting these latter, some interesting information was communicated, particularly in one instance, that of a man who had belonged to the Wesleyan body; and other three cases, all members of one family, a brother and two sisters, whose applications for membership were made

without the knowledge of each other, but from apprehension of duty; and as they resided apart, to different Monthly Meetings. A number of those received into membership, had obtained their education at some of the Society's public schools.

During this sitting, a visit was received from the Women's Yearly Meeting, viz., by Mary Tanner and Sarah Chalk.

Adjourned at a quarter to two, till four.

At the commencement, as well as at a later period of the sitting this morning, it was so dark that lighted candles had to be placed on the clerk's table; the gas in the galleries was also lighted—a circumstance most unusual at this season.

Fifth-day afternoon, four o'clock.—Met according to adjournment. The first business taken up was the perusal of a testimony from York Monthly Meeting, concerning Celia Wilcox. The answers from the General Meeting for Scotland came next, followed by those from the Yearly Meeting of Friends in Ireland; and there was also produced and read a minute from Carlow Monthly Meeting, respecting Elizabeth Barrington, of Ballitore.

A report from the Meeting of Ministers and Elders, signed by Thomas Norton, the clerk, stated that they had held their meeting, and gave a summary of the answers to their queries, which seemed so satisfactory that no comment was made upon it.

The clerk hereupon read a minute which he had made to this effect, that the answers to the queries had all been gone through, and it being thought best to defer reading the accounts of sufferings till a future opportunity, the way was thus open for entering upon the consideration of the state of Society as now laid before us.

A Friend was, soon after this, engaged in supplication, which tended to solemnise the meeting, and prepare it for the important duty before it. The remainder of the sitting was occupied by sundry Friends conveying their views on various points—some in reference to the exceptions to the first query, and others on the present state of things among us as a church. By one of the speakers, in particular, the supposed non-adaptation of silent meetings to our present circumstances, and the allegation of their not supplying that instruction in religious knowledge which our youth stand in need of, were very satisfactorily refuted; and it was clearly demonstrated, that there could no substitute be found in the shape of any *formal* religious services or outward arrangements, to render unnecessary individual subjection to Christ, through obedience to the teachings of the Holy Spirit—seeing it is the end of all rightly anointed ministry, to bring the people, younger as well as older, unto Christ, the minister of the sanctuary, and of the true tabernacle, which the Lord pitched and not man.

Another Friend expressed his desire, that in looking at the deficiencies existing amongst us, we might not be directing our attention to others, but that every one should examine how far he is himself individually at fault; and thus, by each repairing, as it were, the breach before his own door, there would be ability witnessed to lay shoulder to shoulder for the general restoration.

Robert Lindsay expressed the pleasure which it gave him again to meet with Friends on this occasion, after having been prevented for a number of years, and addressed the meeting at considerable length, impressively and much to the purpose, in reference to the subject then before the meeting—the state of the body.

At the close of this as well as of the forenoon sitting, the usual intimation was given by the clerk, respecting the meetings for worship in the different meeting houses, on Sixth-day forenoon.

Adjourned at a quarter past seven till four to-morrow afternoon, when, it was intimated the consideration of the state of Society would be resumed.

Sixth-day morning, 5th Month, 23d.—The various meeting-houses were open for public worship, in accordance with previous intimation and usual practice. That of Devonshire House was very largely attended, the number of our women Friends appearing considerably to preponderate.

Sixth-day afternoon, four o'clock.—Previous to entering on the business, Josiah Forster stated that there was now on the premises, a person from the south of France, in profession with Friends there, who was desirous of attending this meeting, if it were agreeable; and it being mentioned that he was well known to many of our members in London, permission was accordingly given, and Thomas Hodgkin was requested to introduce him. His name we understood, was Bertram Combe.

The meeting then resumed the consideration of the state of Society. The first speaker, after some preliminary general observations, adverted to the fourth query. In almost all the answers there were exceptions; in many instances to the fore part, but more particularly to the latter—that relating to 'plainness of speech, behaviour, and apparel.' He was inclined to think, that if parents and heads of families paid sufficient attention to the principal branch of the query, duly endeavouring 'to train up their children, servants, and others under their care, in a religious life and conversation,' there would be fewer exceptions in the other branch. He thought it was *Christian simplicity* which our principles as to dress called upon us to exemplify, and not *peculiarity*. He then took occasion to advert to the circumstance of some of our members who, though considered exemplary enough in regard to the outward badge of plainness of apparel, were yet stumbling blocks to some of our younger members, inasmuch as they did not also exemplify self-denial in relation to the use of intoxication liquors—a point of far more importance than the peculiar cut of a garment.

This view of the question was dwelt upon at considerable length, consecutively, by a number of other Friends, who advocated the leaving of our youth, and such as did not feel called upon to assume the peculiar garb of the Society, at liberty to dress according to the dictates of Christian simplicity, instead of looking down upon them as unfit for service in the church, because of their thus differing from others.

The above is, we believe, the substance of what was said in favour of the foregoing views.

An equal, or probably a greater number of Friends took an entirely opposite view of the question. The first in this direction speaking somewhat briefly, he was followed by another, who enlarged upon it in a very lucid and satisfactory manner, showing the soundness of the Society's testimony in this particular, and its scriptural authority. The testimony involved not only the duty of exemplifying Christian simplicity, but also that of resisting the ever-fluctuating caprices of *fashion*. It is not enough that an article of attire shall be *simple*—the highest style of fashion may occasionally *chance* deservedly to bear this character; but our Christian profession prohibits a *change*, merely because such *simple* article has ceased to be fashionable. As a necessary consequence, if we thus stand still and attempt to stem the tide, we cannot avoid becoming singular or peculiar. But this *peculiarity* is not what our profession dictates—it is rather what fashion exacts from us, because we refuse to swim in its current; so that it is quite taking a wrong view to suppose that *peculiarity* is what our principles lead to. It is Christian simplicity, rendered eventually peculiar, because we cannot follow in the wake of fashion.

But perhaps a more luminous and convincing position of our profession in this particular, as as in others of primary importance, has seldom heard on such an occasion, than was given by other Friend, who spoke at very considerable le and, as it seemed in our judgment, with evi power and unction. He looked at the subject variety of aspects, general as well as partic giving the results of his own individual experie and of his observation, for which, as Friends aware, he had larger opportunities than most. can scarcely trust ourselves to attempt to detai observations, sensible how difficult a matter it w be to do them justice. What preceding spea with whom he united had advanced, may be to have formed a text for his enlarged and f illustration; and while we doubt not it felt pai to the great majority to listen to what those differed from him pled for, it seemed scarcely t regretted that they got the opportunity to exp themselves, since it was the means of eliciting a communication as was that with which our fr was enabled to favour the meeting.

Quite the principal part of this sitting was o pied with the consideration of answers to the fo query. The subject of gospel ministry, and comparatively small number of our younger m bers of either sex coming forward in the minis was weightily spoken to by one Friend, and value of silent waiting upon God very sweetly appropriately by another.

Altogether, the occasion was a highly favor one, worthy of being borne in remembrance by who were present; and while all, or nearly could not but feel and be prepared to acknowle how precious are such opportunities when minis and others concerned for the welfare of the chu are enabled to hand forth so much sound doctr suitable counsel, solemn warning, as well as co lation and encouragement, it is at the same tim be regretted that few, if any, of such as are causes of mourning, can be reached by such pression.

The subject of total abstinence was also allu to at some length, the speaker urging the consi ation, whether the time had not arrived for Yearly Meeting to take some more decided ac in support of this movement; but though the su subject was touched upon by another Friend, th was no conclusion come to in the matter.

Friends generally appearing to have relie their minds in reference to the subject before meeting, the clerk put the inquiry, as usual, w ther the concern which had now been manife for the prosperity of the body, should lead to issue of an epistle to the Quarterly and Mont Meetings. There seemed to be no difference opinion in regard to the propriety of following example of previous years; it was accordingly c cluded to give forth an epistle, the preparation which was referred to the Committee of Repre tatives.

Adjourned, at a quarter past seven, till cle to-morrow forenoon.

The Large Committee immediately after r Isaac Robson, Clerk, and Joseph Pease and J Dymond, assistants. The Tithe question ca briefly into discussion, but was postponed. A c mittee was appointed to take charge of the Gen Epistle, and the meeting separated, to meet at s time as the Yearly Meeting may direct.

Seventh-day morning, nine o'clock.—The Frie appointed last evening in the Large Committee take charge of the General Epistle met, and a a very harmonious expression of sentiment, a s committee was chosen to prepare a draft of s document.

eleven, the Yearly Meeting assembled. Before ommencement of the business, a Friend was ed in supplication, much in the language of 0th Psalm :—'Give ear, O Shepherd of Israel, hat leadest Joseph like a flock, &c.; before im, and Benjamin, and Manasseh, stir up thy th, and come and save us. Thou hast brought e out of Egypt,' &c. Another Friend followed n acceptable communication in the ministry, g from the text, 'Build thou the walls of Jeru,' and showing whence ability was to be de for restoring the waste places—'Not by might y power, but by my Spirit, saith the Lord.'

e reports of Distraints for ecclesiastical pur were then read, the Quarterly Meeting of c as usual, having sustained the greatly pre rating amount, somewhere about £2300. A ber of Friends were induced to comment upon eturns, and upon the effect which the relaxa of our rules last year had produced in regard ese returns. It appearing that the general ion might come up for discussion, Friends reminded that, as it had been briefly adverted the Large Committee, and was again likely to sumed there, such as might wish to express sentiments would have another opportunity loing so, without further encroaching on the of this meeting.

roceeded next to read the epistles. First came from Ireland, followed by those from America. he former, as also in several of the latter, allu was made to the recent separation in Ohio rly Meeting, narrating the action taken by each eference to which section had been acknow ed. In the epistle from Philadelphia, mention ade of the reception of the document issued by meeting last year, in justification of the part h it had decided to take in regard to the divi in Ohio; and dissatisfaction is expressed that, e appearing to disapprove of separations, this ing should, as it seemed to Friends of Phila hia, have rather encouraged them by the re ition of an irregularly constituted body, con ng, as it did, of much the smaller number of esentatives, viz., 12 to 30.

n the whole having been read, the clerk pro ed two minutes from the Meeting for Sufferin in reference to the divided state of our Society he American continent, during the last thirty rs. These minutes simply stated, that this sub had claimed much attention, and the object of ging it thus forward seemed to be to induce the rly Meeting to consider what could be done to vide a remedy for so painful a state of things. considerable time was spent in this way, many nds expressing their views and feelings, but nout arriving at that unanimity which was deem lesirable on so important, as well as so intricate comprehensive a subject. While some thought way opened at present for any action on our t, and would wish the discussion to drop, others e of the judgment that the meeting was in too austed a state to do justice to the question, er by continuing the discussion in this state, or passing it by altogether. It was ultimately eed to adjourn till half-past four this afternoon, preference, as had been suggested, to Second- morning. Adjourned accordingly at half-past

In the epistle from Indiana, it was stated that large size of that Yearly Meeting rendered the nsaction of its business inconvenient. Five of the nstituent Quarterly Meetings had, therefore, pro sed to form themselves into a new Yearly Meet , to be denominated Western Yearly Meeting. e proposal, having been solidly considered, was reed to, and Friends of Indiana wished our Yearly Meeting to give an opinion in reference to this important step.

Seventh-day afternoon, half-past four.—On again coming together, the consideration of the minutes of the Meeting for Sufferings was resumed. Many Friends availed themselves of the opportunity to give their opinion, when a greater unanimity was evinced than in the forenoon; but all in the direction that the time was not yet come for this meeting to take any further proceedings in the case.

In the course of the sitting, some very interesting information respecting the Hicksites was communicated, evincing a disposition which, for some time, has been apparently on the increase, for a reunion with Friends. One instance was stated of two Quarterly Meetings of Hicksites in the state of New York having applied to the Yearly Meeting of (orthodox) Friends of the same state, for admission into fellowship with them. This information, together with more of a similar character, seemed to render it increasingly desirable for some right way manifesting itself for the restoration of those who, in the Hicksite secession, were led away, to a great extent, rather by party spirit than by principle. Much that was painful was also stated respecting this denomination, and calculated to render the return of its members to our Society almost hopeless. With regard, however, to the subsequent divisions, those that had occurred within the last twelve or fourteen years, there appeared to be more hope of ultimately effecting a reunion, seeing they had less connection with doctrinal differences, than with points of discipline. The feelings of many Friends were more particularly affected, on behalf of the great numbers who, by the late secession in Ohio, were separated from our communion—whole Quarterly Meetings having, by the action of their representatives to the Yearly Meeting in 1854, been cut off from our fellowship. As already stated, however, Friends being very unanimously of the judgment, that this meeting was not in a position to move in the direction which the minutes from the Meeting for Sufferings seemed to point out, a minute was made to the effect, that much sympathy and religious interest had been felt for those whose case had been now under consideration; with a desire that it might please the great Head of the Church, so to influence their hearts, that they might be restored to fellowship with our Society, and to the unity of the Spirit in the bond of peace.

The proposal which seemed to meet with most favour from the meeting, was that made by a venerable Friend in the forenoon, to send one general epistle to our friends in America, suspending, for this year, our acknowledgement of theirs individually. With some Friends it was a cause of complaint, that the Meeting for Sufferings, in sending their minute before the Yearly Meeting, did not accompany it with sufficient information, which they no doubt possessed, respecting the state of our Society in America—such as the causes which had led to its present divided condition—as would have enabled the meeting more satisfactorily to judge what course it would be best to pursue, in order to promote the desired restoration to unity and harmony.

One Friend briefly replied to this by stating, that the secession alluded to as having occurred thirty years ago, as most present could not but be aware, was that known under the name of the Hicksite secession, arising from an extensive and grievous departure from the established and recognized faith of the Society. A subsequent separation was that which took place in Indiana, about fourteen years ago, solely on anti-slavery grounds. In this case, as also in the more recent division in New England, as well as in that in Ohio, which the Yearly Meeting had before it last year, it was generally considered that the separations proceeded chiefly from differences of opinion on points of discipline.

It appeared to be the judgment of some who spoke on this occasion, that having identified ourselves with one or other section of the seceders, we had put ourselves out of our proper position for usefulness in the way we were contemplating; indeed, as one Friend observed, both in the fore and afternoon, we had materially injured our own standing, by what seemed to him our precipitancy last year, in the case of Ohio.

The value of unity was also dwelt upon by a number of Friends, some of them expressing a readiness to make great sacrifices—not, of course, of essentials—to effect its restoration among our American churches; and although it was suggested by the clerk, on entering upon the discussion, that Friends should confine their remarks strictly to the subject before them—viz., the minute from the Meeting for Sufferings, not taking a retrospective but a prospective view, it seemed impossible to do so, if anything like justice was to be done in the case. It was therefore hinted, by at least one of the speakers, that, however painful and humiliating it might prove to us, there might be a necessity for this meeting to review its own proceedings, if not also to annul some of them, before we could place ourselves in such a position, as would enable us to hold out the olive branch with reasonable prospect of ready acceptance.

It may also be mentioned, that the Catholic spirit which the minute from the Meeting for Sufferings seemed to breathe, had commended it to the minds of many; the members of that body having embraced, in their sympathy and religious concern, not only such as were still one with our Society in doctrine, though nominally separated by the discipline, but those who, so far back as thirty years since, had been disunited for difference in essentials; in short, that sympathy and concern extending *to all who bear the name of Friends.*

Adjourned, at seven, till eleven on Second-day morning.

The Large Committee met after the adjournment of the Yearly Meeting, and nominated sub-committees to take charge of the epistles, which were all apportioned, save the one from Philadelphia, the disposal of which is deferred for consideration on Second-day morning, at half past nine, the meeting adjourning to that time.

The Large Committee assembled at half-past nine on *Second-day morning, 5th Month, 26th, 1856.*

The clerk having intimated the object of the present sitting, viz., to consider how to dispose of the epistle from Philadelphia, he proposed that the epistle from our Yearly Meeting of last year should be read, followed by the reply from Philadelphia. This was accordingly done, and the expression of sentiment occupied nearly an hour and a half. There seemed an entire unanimity of judgment, so far as could be ascertained from what was said, in reference to the propriety of acknowledging the epistle. One Friend, or probably two at most, while not disapproving of sending an acknowledgement, seemed to think there was a necessity for contraverting certain statements in the epistle from Philadelphia; dwelling also on the little evidence of its emanating from that spirit of love and brotherly feeling, which ought to characterize, and usually distinguishes such documents. The prevailing judgment, however, went decidedly against our reply entering upon controverted points, or making use of any language in the least likely to cause irritation. While there might be some ground for dissatisfaction with the course which Philadelphia Yearly

Meeting had pursued since 1846, when the Division took place in New England; and while the epistle from them, which had now been read, was not so agreeably worded as we could wish; besides its not appearing that they had taken or noticed the advice which our Yearly Meeting last year had tendered them—still it was to be remembered that they were an independent body as well as we, and had as good a right to be dissatisfied with the course which we had pursued, in reference to the divisions among Friends in their land, as we with theirs.

There being thus a general disposition not to interrupt or suspend the correspondence, some Friends were for leaving the sub-committee at liberty to use their own judgment as to the topics in reply; while it was the sense of others, and the prevailing one, that our epistle should be the dictate of love, cautiously guarding against giving offence. The nomination of the sub-committee had to be deferred till another sitting."

(To be concluded.)

SUMMARY OF EVENTS.

EUROPE.—By the steamship Atlantic, Liverpool dates to the 11th instant have been received. Among the passengers by the Atlantic, was Millard Fillmore, Ex-President of the United States. The chief subject of discussion in the British newspapers was the difficulties with this country. No official notice of Crampton's dismissal had reached England, yet it was regarded as a fixed fact, from the positive but unofficial statements taken out by the Asia. The London Times continues to exhibit great bitterness towards the United States, but the journals generally argue that as the case is a personal one, there is no necessity for sending away the American Minister in retaliation. In reply to a question put to Lord Palmerston in Parliament, he said the questions now pending between the two governments, were of a very grave character, but he sincerely hoped, and not without good reason, that the discussions may terminate peaceably. The Parliamentary proceedings have been generally unimportant. The bill altering the oath administered to members of Parliament, so that Jews can be qualified, has been passed by the House of Commons. The weather has been favourable for agricultural purposes. The French papers continue to be filled with accounts of the damage occasioned by the recent floods. Not less than 500 houses had been destroyed at Lyons, and 130 at Avignon. In some localities, the rain and overflow had seriously injured the crops; about 40,000 persons have been rendered houseless, and 100,000 thrown out of employment. The government has given ten millions of francs for the relief of the sufferers. The Spanish fleet ordered to Mexico, consists of eleven ships of war, including two ships of the line and four steamers. An attempt is reported to have been made on the life of the Queen of Spain. A young man presented a pistol at her, but was immediately disarmed. A new Portuguese Ministry has been formed with the Marquis Soule as President. The vine and potato crops in Portugal were threatened with failure, on account of the unfavourable weather. The Danish government seems bent on incorporating the duchies of Schleswig and Holstein into the kingdom of Denmark. The government relies on the support of France and England to effect what will be very distasteful to the Germanic Diet. A violent proclamation to the Italians to rise in insurrection, has been published by Mazzini and Victor Hugo. France and Austria have both sent urgent notes to the Neapolitan government. France hints at intervention, should outbreaks occur in Naples or Sicily. The position of affairs in Italy is considered critical. It is stated that the Austrian government has resolved to erect the Venetian provinces into the kingdom of upper Italy. Arabia is still in a state of insurrection, refusing any longer to recognize the rule of the Sultan. More Turkish outrages against the Christians are reported. The Russian Commissioner, to settle affairs in the principalities, has been instructed to retire from the commission if Moklir Pasha, formerly Prince Stundsea, should be admitted to take part in the deliberation of the commission. Letters from the Crimea to Fifth mo. 31st, mention that 70,000 masons are to be employed in re-building Sebastopol, after the departure of the Allies. The English army continues healthy. It is reported in Berlin that Prussia and Sardinia have both demanded to be admitted into the commission reorganizing the Danubian Principalities, and the demand has been acceded to.

London.—The money market was unchanged. Consols, 94 a 94¼. The bullion in the Bank of England had increased £825,000.

Liverpool.—The cotton market was dull, but prices not quotably lower. Flour had advanced 6*d.* a 1*s.*, and wheat, 2*d.* Corn had advanced 1*s.* a 1*s.* 6*d.* The transactions in breadstuffs were rather limited.

MEXICO.—The new Spanish Minister to Mexico arrived at Vera Cruz on the 28th ult., and proceeded to the capital. The Spanish fleet had also arrived, it was supposed to blockade the port of Vera Cruz, if Mexico does not come to terms with the Spanish Minister. He demands a settlement of the claims of Spanish subjects upon the Mexican government, which were admitted some years ago to the amount of $5,802,662. The equity of some of these claims is disputed by Mexico. Congress was in session endeavouring to form a Constitution for the country.

UNITED STATES.—*Congress.*—Senator Clayton's bill supplementary to the act to organize Nebraska and Kansas, provides that the Secretary of State shall cause a census to be taken, making 1000 persons the basis for one representative, and 2000 for a member of Council of the Territory. The legal voters must be bona fide residents three months before the election, and one month resident of their respective election districts: after the apportionment, the Governor to issue his proclamation directing the election of members of the Legislative Assembly, to be held not less than fifty nor more than sixty days, after the date of the proclamation. No law shall remain in force, whereby the people shall be prohibited from a free and full discussion of their own domestic institutions or interests, or whereby said people shall be prohibited from advocating or denying the existence or the propriety of prohibiting slavery in the Territory, or be visited or threatened with any penalty or punishment; nor shall any test oath be required relative to the Fugitive Slave Law or any other law of Congress. Trial by jury shall be as at common law, and no challenge or objection to a juror shall avail which is not authorized by the rules of the common law, any statute to the contrary notwithstanding. The bill provides, that when the Territory shall contain 93,420 inhabitants, the people shall be authorized to call a Convention for the formation of a State Constitution. Mr. Geyer, of Missouri, has given notice to the Senate of his intention to introduce a bill supplementary to the act to organize the Territories of Nebraska and Kansas, and Toombs, of Georgia, of his intention to introduce a bill to take a census of the population of Kansas, to protect the inhabitants in the exercise of the elective franchise, and to provide for calling a convention preparatory to the admission of the territory as a State into the Union. In consequence of the Republican Convention at Philadelphia last week, the House of Representatives was but little in session. On the 21st, strong speeches were delivered by Wilmax and Burlinghame. The former denounced the territorial laws of Kansas with just severity, and the latter spoke with much eloquence and energy upon the Sumner outrage. Washburn, of Maine, urged the necessity of a union of the opponents of the administration, and those adverse to the extension of slavery in the territories.

Presidential Nominations.—The Republican Convention which met in Philadelphia last week, nominated John C. Fremont, of California, for the office of President, and William L. Dayton, of New Jersey, for that of Vice President. Millard Fillmore, who was nominated by the American Convention, will probably be supported by a portion of that party, but the contest will, it is supposed, lie principally between Buchanan and Fremont. The platform and principles adopted by the Republican Convention, denies the authority of Congress, of a territorial Legislature, of any individual or association of individuals, to give legal existence to slavery in any territory of the United States, while the present Constitution shall be maintained; it also asserts both the right and the duty of Congress to prohibit in the territories those twin relics of barbarism, polygamy and slavery. Resolutions were passed in favour of a railroad to the Pacific ocean, of appropriations by Congress for the improvement of rivers and harbours of a national character, and against the doctrine embodied in the Ostend Circular, in effect, declaring that might makes right, which is declared to be unworthy of American diplomacy, and a shame and dishonour upon any government or people that gave it their sanction.

Philadelphia.—Mortality last week, 212. On the 22d inst., a thermometer placed where the reflection of the sun had no effect upon it, gave the following indications; at 5 A. M., 79°; at 8, 83½°; at 10, 89°; at 11, 94°; at 3 P. M., 98, and at 4, 98°.

New York.—Mortality last week, 324; 90 of whom were foreigners. On the 21st, sales of white wheat were made at $1.70; red, $1.37 a $1.55; yellow corn, 56 cents a 58 cents; white southern, 57 cents a 60 cents. The migration at this port is greatly reduced from former years, and consists mainly of a more respectable class of immigrants, there being but few paupers among them. A few days since, the ship Thornton from Liverpool landed upwards of 700 Mormons, all destined for Utah.

Kansas.—According to the latest accounts, Colonel Sumner was actively engaged in putting down the Missourian hordes, which have been committing outrages in the territory. He had incurred the resentment of the Missourians who threatened vengeance. Most of the bands of armed men, have been dispersed, and the reports of murder and outrages have nearly ceased. The Southern members of Congress deprecate, it is said, the reported conduct of the pro-slavery leaders in Kansas, and ask them not to come in collision with the Federal authorities. General Whitfield, delegate from Kansas, has returned to Washington. He says, if the government will withdraw the troops, peace would the better be preserved. The policy of the administration with regard to Kansas, is understood to be unchanged, it being still the determination of the President to maintain the local laws of the territory. Notwithstanding the strenuous efforts to fasten slavery upon Kansas, very few slaves have been introduced.

Miscellaneous.—*New Flour.*—Flour from new Genesee wheat made its appearance in New York on the 16th inst., being two days earlier than in any of the last five years. It was offered at $10.50 per barrel, the wheat from which it was made, sold at $2.00.

The Western Rivers.—The St. Louis (Mo.) Republican of the 12th inst., says:—"The river at this point continues to fall slowly. The last boats from the Missouri report the water falling, and great difficulty in passing the mouth. Nearly all the boats going both ways have been aground at the mouth of the Missouri. Upper Mississippi is falling, with 3½ feet on the lower rapids. The Illinois river is becoming very low.

Telegraph Across the Atlantic.—The St. Johns (N. F.) Observer states that an attempt will soon be made to lay a telegraphic cable across the Atlantic. The length of the cable will be 2,400 miles, and two steamers, each with 1,200 miles of cable, will meet midway between Ireland and Newfoundland, unite the cables and proceed in opposite directions to the land.

The Lake Cities.—The Cincinnati Gazette furnishes the following comparative table of the growth of the principal lake cities:

	1840.	1850.	1855.
Buffalo, -	18,243	42,260	65,000
Cleveland, -	6,071	17,034	55,000
Sandusky, -	1,484	5,088	10,000
Toledo, -	1,222	3,819	15,000
Detroit, -	9,192	21,019	40,000
Chicago, -	4,470	29,963	80,000
Milwaukie, -	1,740	21,461	40,000
Aggregate,	42,292	170,644	305,000

The Forty-first Asteriod was discovered on the ult. by Goldschmidt. It is a star of the twelfth magnitude.

The Emperor of Brazil, Don Pedro II, has been elected an honorary member of the New York Historical Society. He is said to be a man of considerable scientific attainments, and at the head of the Historical and Geographical Society of Brazil.

WEST-TOWN BOARDING-SCHOOL.

The Committee who have charge of the Boarding School at West-Town in accordance with authority given them by the late Yearly Meeting, have concluded to raise the price of board and tuition for each pupil from forty dollars to *forty-five* dollars per session, to commence with the winter session.

Those Friends within the limits of Philadelphia Yearly Meeting, who intend sending their children to the School the next session, will please enter them before the 1st of the Ninth month. Applications for admission are to be made to Joseph Snowdon, Superintendent, at the School, or Joseph Scattergood, Treasurer, No. 84 Arch st., Philad., Sixth mo. 10, 1856.

WANTED.

A Female Teacher is wanted for Friends' School at Crosswicks, N. J. Early application may be made to JOEL H. MIDDLETON, Crosswicks, N. J. Or, SAMUEL ALLINSON, Jr., Yardville, N. J.

DIED, on the 4th inst., at her residence in Muncy, Pa., coming county, ANN EDWARDS, relict of the late Joel Edwards, in the 77th year of her age; a valuable member of Muncy Monthly Meeting.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXIX. SEVENTH-DAY, SEVENTH MONTH 5, 1856. NO. 43.

PUBLISHED WEEKLY.

Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

ge to any part of Pennsylvania, for three if paid in advance, three and a quarter cents; part of the United States, for three months, if advance, six and a-half cents.

For "The Friend."

Mammoth Steamship.

(Continued from page 330.)

nishing as are all the proportions of this r ship, of course it will not be supposed that ze is claimed, either by the engineer or the ny to which she belongs, as any merit in- ently of the substantial benefits which ac- ay it. Her length is not her only advantage. , length in a steamer is merely a comparative nd applies entirely to the extent of the river n-path she has to traverse. The "Himalaya" tance, would be an enormous vessel to run to te and back, but is only a full-size one to he Atlantic or to navigate the Mediterranean. Great Eastern," again, would be large for ssage to New York, but is only duly pro- ed to make a voyage round the world. s interesting to note the progressive advance in steam-vessels that has taken place within st thirty years, which the following table, will clear to the reader:

Name and Description.	Length. ft.	Br. ft.	in.
Enterprise, built expressly to go to India, coaling at intermediate stations,	122	27	0
Tagus, for the Mediterranean, . . .	182	28	0
Great Western, first ship built expressly for Atlantic passage, ...	236	35	6
Great Britain, first large screw ship, and the largest iron ship then projected,	322	51	0
Himalaya, iron ship for the Mediterranean, ...	370	43	6
Persia, iron ship, ...	390	45	0
Eastern steam ship, iron, ...	680	83	0

us the ocean-going steamer of 1856 is nearly nes the length of that of 1825, whilst the differ- between their tonnage is still more in favour of st-built vessel. The augmentation has gone an increasing ratio, and if it is still to con- we wonder over what space of water our than of 1870 will extend! As our commer- team marine is in the hands of shrewd men of ess, it can well be imagined that the reasons is progressive advance in size are sound. Steam uilders are, in fact, only accommodating the ge of their vessels to the length of the voyages have to perform, so that they may be enabled rry their own coals over and above their due rtion of cargo. This the "Great Western" nd succeeded; this the various screw-steamers n have run the Australian voyage have not , and consequently they have failed.

o one can fail to have observed that within these last two years steam, in long voyages, has apparently suffered a defeat. Clippers of all kinds, the "Marco Polos," "Red Jackets," and "Morning Stars," seem to have recovered their own again, and in the race round the world, sails have distanced the paddle and the screw. When the question comes to be examined, however, it is clear that it is the want of steam that has caused the failure: vessels, in short, as little fitted to make a passage of thirteen thousand miles, as the "Sirius," though by a lucky accident it managed to cross the Atlantic at the same time as the "Great Western," was to go a continuous stage of three thousand miles. They have all the expense of the new motive power without its full advantages, and, in consequence of their having to go out of their direct course to coal, they lose from twelve to twenty days on the passage. The tortoise in this instance has not fairly beaten the hare, because the latter has wilfully broken her leg.

Brunel, in constructing a ship of such large dimensions, is only doing for the long Eastern voyage what he did for the shorter Western one, namely making her own coal bunkers the bank on which she can draw to any extent during her progress out and home, instead of employing from six to eight ships of 500 tons burthen each to carry fuel for her half over the globe, as the vessels at present running are obliged to do; a system which may be likened to the extravagance of a man who employs half-a-dozen porters to carry parcels which, by proper management, he could manage to stow away in his own knapsack.

The report of the Directors for the year 1853 puts the calculation, with respect to her immense advantage, in carrying power so well, that we quote it entire:

"In avoiding the *delay* of coaling on the voyage, your ships will also escape the great *cost* of taking coals at a foreign station. Coals obtained on the Indian and Australian route cost on the average, including waste and deterioration, four or five times as much per ton as in this country. But your ships will take their whole amount of coals for the voyage from near the pit's mouth, at a rate not exceeding for the best quality, 12*s.* to 14*s.* per ton. On the voyage of existing steam vessels to Australia or India and home, the consumption amounts to from 4000 to 6000 tons; the cost of which would supply 15 to 20,000 tons if taken on board at some port in immediate communication with the coal field.

"Each of the Company's ships will carry, besides their own coals, upwards of 5000 tons measurement of merchandize, and will have 800 cabins for passengers of the highest class, with ample space for troops and lower class passengers. These you will not only be able to carry at rates much smaller than those by any existing steam ships, but with an unprecedent amount of room, comfort and convenience.

"In thus determining the size of the ships, your Directors believe that they are also obtaining the elements of a speed heretofore unknown; and if hereafter coals applicable to the purposes of steam can be supplied from the mines of Australia, the carrying capacity both for cargo and passengers will be proportionately increased. The great length of these ships will undoubtedly, according to all present experience, enable them to pass through the water at a velocity of at least fifteen knots an hour, with a smaller power in proportion to their tonnage than ordinary vessels now require to make ten knots. Speed is in fact, another result of great size. It is believed that by this speed, combined with the absence of stoppages, the voyage *between England and India*, by the Cape will be reduced to from thirty to thirty-three days, and between England and Australia to thirty-three or thirty-six days."

It may be objected that the route by way of Egypt, now that the railway is in progress and a canal is projected, will prove a too powerful competitor for the traffic round the Cape; but independently of the inconvenience and tediousness of embarking and then re-embarking, which will be fatal to vessels containing such bulky cargoes as cumber the Australian steamers, it is asserted that the ocean path is the direct route to the focus of Australian connection with Europe. Thus the navigable distances from Land's End to Port Philip are as follow:

Via the Cape of Good Hope, 11,819 miles; *via* Cape Horn, 12,700; *via* Gibraltar, Malta, Alexandria, Point de Galle, and Singapore, including transit through Egypt, 12,034 miles; *via* Panama, including transit across the Isthmus, 12,678 miles.

The General Association for the Australian Colonies have indeed recommended for the mail line the overland route as far as Aden, and from thence by way of Diego Garcia and King George's Sound to Melbourne, an estimated distance of 17,348 miles, which they fancy can be done in forty-four days. If the Eastern Steam Ship Company have not anticipated too great a speed for their vessel—and we scarcely think they have done so, considering that the "Persia" has made fourteen and a half knots with very inferior powers of propulsion—this passage will be beaten by between eight and ten days without the expense and trouble of making a long land journey across the isthmus. Surely this, if it comes to pass, will go far to accomplish the Alnaschar dream of the "Times," that the period will arrive when we shall be able to communicate with our friends at the antipodes in a month.

As far as the commercial part of the speculation goes, we are of course incapable of giving an opinion. The value of the exports to the young empire, which is springing up with such rapidity in Polynesia, is, however, so great—in 1853 the declared value being £14,506,532—that we cannot conceive there would be any lack of cargo even for our Leviathan. That she will be *par excellence* the emigrant ship, who can doubt, when we find that, with all her splendid accommodations, she will be enable to take passengers of the first class for £65, of the second class for £35, and of the third class for £25!

Her great proportions will indeed almost deceive her passengers into the idea that they are sojourning in some noble mansion. Let us imagine her saloons blazing at night with gas, which will be manufactured on board and supplied to every part of the ship; let us picture to ourselves her magnificent sweep of deck filled with gay promenaders, listening to the band as she sails over a summer's sea;

annoyed by no smoke, for in consequence of the use of anthracite coal, none will be emitted from her five funnels; and distressed by no motion, as in consequence of her length she will stride with ease over the waves of the Pacific. We might also dwell for a moment upon the mighty larder of our Leviathan prepared for her flight of five-and-thirty days, without a stoppage, across the ocean desert, with a whole town on board; or we might draw a comparison between her and the Ark (which by-the-bye had not half her capacity,) as she receives on board her flocks and herds to furnish fresh meat for the passage. But we believe we have said enough to enable those who have not visited the rising edifice, to realize the vast extent of this latest experiment in ship-building. And as a contrast to this fair side of the medal, let us fancy her rushing through the night in full career—an arrow 27,000 tons in weight, propelled by a bow of 3000 horse-power. Can we without a shudder contemplate the possibility of a collision with such a resistless force? a line-of-battle ship with a thousand hands on board cleft in two as swiftly as the apple by the shaft of Tell.

Every precaution will indeed be taken to avert such a catastrophe. The electric light will be fixed at the mast-head, so that in dark nights the ship will carry a moonlight atmosphere wherever she goes. In case of any fatal injury to herself, which could not well happen, boats have been provided capable of taking off her passengers, even if counted by thousands. Thus, she will have two screw-steamers of 90 feet in length as paddle-box boats, and in addition to these she will carry a large number of the new collapsing, or bellows boats, as the sailors call them. These curious structures, the invention of the Rev. E. L. Berthon, expand and shut like a Gibus hat, or the hood of a carriage, occupying so little room that half-a-dozen of them of a large size can be stowed in the same space as would be occupied by an ordinary jolly-boat, and seem to be as easily opened as a parasol or umbrella.

If we mistake not, the success of the "Great Eastern," will constitute a new era in the art of aggressive war. We question whether Europe during the course of the present contest has not been more struck by our enormous power of moving suddenly large masses of men from one end of Europe to another, than by any other operation which we have performed. The "Himalaya," as she steamed up the Bosphorus, filled the lazy Turks with astonishment; and the cloud of steamers and sailing vessels which carried the Allied army to the shores of the Crimea, has been dwelt upon as an exposition of maritime magnificence such as the world never witnessed before. What will the reader say when we tell him that five vessels such as the "Great Eastern," could bring home our 50,000 troops from the Crimea, with all their artillery and baggage, in the course of ten or twelve days!

For "The Friend."

In prosperity and the enjoyment of health, when danger appears to be far off, man is apt to forget the uncertainty of life, and the work of salvation. It is hard, even for the devoted Christian, to feel with proper force, the possibility of a sudden transition from this world, and all the endearments of the tenderest connections, the objects of his most affectionate regard with which he is surrounded, to a state of everlasting fixedness among the blessed. But the change is certain; and as the day and the hour when his Lord shall call him to give the solemn account are unknown to him, it is of the utmost importance to have his loins girded, his light constantly burning, watching for the coming of his Lord, to be ready to do his will on all occasions—and then when he finally appears to release him from the toils and temptations and afflictions of this lower world, he will be prepared to receive the summons with serenity of soul, and not with consternation and fear. Sometimes sickness, or the apparent approach of death through unexpected danger, is permitted to arouse and awaken the careless or the rebellious to a sense of their unpreparedness for eternity, and when it has its designed effect, it is among the choicest blessings.

Joseph Oxley had two escapes from the loss of his life, one of which made deep impression on him. He was indentured for two years to a watchmaker, a member of the Church of England. He was often taken by him to places of diversion, by which he was drawn away from the path of self-denial, and that propriety of conduct becoming a Friend. But at this time he was brought under conviction and condemnation for evil. His mistress was not of the same kind and affable disposition, and though he was far from doing what he ought, he could not compliment her in the way she required, which he believed created her dislike because he was called a Quaker. On one occasion she got angry with him, and her passion increased so high that she threatened to take his life, and catching up a knife, made an attempt to give the fatal stroke. But providentially, a maid servant being near, took hold of her arm and prevented the intended evil, and thereby gave him the opportunity of escaping. About this time, George Whitfield, then a young man, educated for a clergyman, who became popular as a preacher, and drew together large companies, came to London. Joseph Oxley, with others, went from curiosity to one of his meetings, and was pleased with his discourse. Soon after this meeting, he again heard he was to preach at Kensington Common, a short distance out of London, and he went there, many thousands of people gathering on the occasion. The weather was excessively hot, and getting into the throng and being very low of stature, he was so overcome by the pressure of the crowd, that he thought he should have been smothered to death in a little time. Under this apprehension, his distress of mind and the horror of his soul were beyond description. The terrors of the Lord came upon him, the stings of a wounded conscience which he felt at that fearful moment, pierced him through for sin and transgression. "I thought," he says, "I was in a few moments going to launch out of time into eternity; nothing but everlasting woe and misery seemed to be my portion forever and ever. My agony was so great, both in body and mind, as to make it intolerable to bear without loud shrieks and cries, which were heard far and near by very many. The press was so great that they who had their arms down could not get them up. At length a gentlewoman in a coach noticed my condition, extended herself as far out as she well could, and with her fan yielded me some relief, which enabled me to stand it till the preacher had done. Now was my heart made to rejoice, and my tongue broke forth into singing, unto Him to whom I was so largely indebted, and by whose providence I was yet spared. Even at this very time I cannot help saying, 'I thank thee, O my Heavenly Father, in that thou didst not call me away in that unprepared hour, to give an account of my stewardship; very unfit I most assuredly was to appear before thy great tribunal. I beg I may ever, while I live, reverently and gratefully remember and acknowledge this day, wherein thou wast pleased so mercifully to spare, to reach, and to visit so effectually my soul. Now I know that my Redeemer liveth, and because he lives I live also.' I returned home, filled as with the new wine of the kingdom. I was, com
tively, as if I had come out of a pond, and
stopped by several to know where I had b
was in such a strange condition. But Oh
draught of divine consolation, the gracious ab
ings of the love of God to my soul; it was
vishing to my heart that I never felt the li
fore. I was almost fit to be swallowed up
ecstasy of joy. I now loved to attend me
for religious worship on week days as well as
on First-day, from which I experienced great h
and strength."

The time for which he had indentured h
being nearly expired, he sought for a suitable
to board, and was introduced, by James Ol
into the family of a Friend, which he had
desired. Not long after leaving his master, h
occasion to make him a visit on business, and
there his master prevailed with him to cons
accompany him and some young persons to Isli
to amuse themselves with playing some games
He felt doubts of the propriety of going, but
for want of proper firmness, agreed to the pro
concluding he would keep from committing s
much as was possible. For want of watchf
and prayer, resolutions formed in time of extr
to love and serve the Lord, and the mercy
had been there extended, are often easily forg
and disregarded. But before the time ca
was visited by a young man living with his m
who was sober and very religious in his way,
came to speak to him about the proposed
which he thought was by no means consistent
the profession Joseph Oxley made, and stre
induce him to relinquish it. But Joseph repli
he passed his word, he could not depart fr
without telling a falsehood. James Oldham,
lived in the same house, a Friend in whom wa
spirit of Truth and righteousness, joined the y
man, and argued so closely and powerfully,
convince and overcome J. Oxley, notwithsta
his efforts to maintain the ground he had t
The labour of these persons had a humbling
upon him, and under the flowing of heavenly
in a fresh visitation to his mind, he was rea
say, "Lord, make me what thou wouldst hav
to be;" and in yielding to the will of God, it
cured for him that peace which the world a
vain pleasures can never give. From this tim
began to seek the Lord in the way of his requi
forsaking all his old companions and idle past
and led a life of circumspection and care;
was the day of his espousals, wherein nothi
peared to him so lovely as Truth.

James Oldham, who was a true friend
counsellor to him, came to London when a y
man, and worked at his business in the capaci
a journeyman. He had been brought up i
way of the Church of England, but became a
libertine, accustoming himself to frequent swea
insomuch that he did not know when he did it.
was convinced of the Truth as held by Friend
ter he came to London, and before Joseph
knew him, of whom Joseph says: "He was en
with a large share of natural understanding,
was under the government of best wisdom; an
lived in abstinence that he might the better fee
hungry and clothe the naked. He was che
and pleasant in conversation, also very instru
and edifying. I never heard him speak ev
any; but he made it a rule if he could not s
well of a person, to be silent rather than spe
their prejudice. He was of a meek and hu
spirit, a diligent attender of religious meeting
worship, both as to the day and the time appoi
The becoming gravity and steadiness with w
he sat in meetings, from the beginning to the

profitable and instructive to behold. He was heard speaking slightly of any testimony as dropped in a meeting, or the instrument of ough never so mean or contemptible. He was f love and good works, and abounded in cha- p people of all professions; it seemed to me to s meat and drink to do the will of his Maker, he was the greatest pattern of christian perfection I ever knew; his work was cut short in ousness; he was taken ill of a fever which ery violent, and continued but a few days. ved and died in the Lord." Joseph Oxley's ises were blessed to himself—he grew in the g knowledge of the Lord, and in his 27th year alled to the work of the ministry, in which e he visited this city.

Discoveries in Jerusalem.

he following notes, says the London Athenæum, cient quarries in Jerusalem, have been placed e service of our readers through a friend. They made by a Scotch gentleman, — Douglass: During a visit to Jerusalem in the spring of I became acquainted with a very intelligent ew, who informed me that there were extensive ies beneath the city, and that there was un- ed evidence that from these quarries the stones oyed in the building and rebuilding of the le were obtained. He told me that these ex- ions were accessible through a small opening r the north wall of the city; that he had de- ed some time before with two English gentle- and had spent with them several hours in ex- g the excavations, which were sufficiently ex- ve to have furnished stones enough, not only he construction of this Temple, but for the e of Jerusalem, the walls included. He ex- ed his readiness to accompany me, but pro- l to go after dark, as he feared the Turkish ls might fire upon and maltreat us, if they de- t us. As my party comprised two ladies and wo sons, all equally desirous with myself to hese excavations—as the gates of the city were d at sunset—and as there were no houses out- the walls—I would not listen to the proposal end the night in the open air, unless, upon I found I could do no better. We accordingly to examine the situation and size of the open- We found it about 150 yards to the eastward e Damascus Gate. It seemed like the burrow me wild animal; there was no rubbish above pening, but some tall grass and weeds. Per- entering might be observed by the guards; his did not seem very likely, as the soldiers rally remained within the gate, and only very y one sauntered outside. We accordingly de- d to make the attempt by daylight, fully satis- that, even if observed, we should be only rudely n away. The next morning, therefore, we left ity as soon as the gates were opened. One of party got into the hole, but returned, saying, it would be necessary to get in feet foremost, ere was a perpendicular descent of six or seven at the inner opening. He went back again the lights; I followed. The ladies were got gh with considerable difficulty. When fairly e we found ourselves in an immense vault, and ling upon the top of a pile which was very evi- y formed by the accumulation of the minute cles from the final dressings of the blocks of . On descending this pile we entered, through ge arch, into another vault, equally vast, and rated from the first by enormous pillars. This , or quarry, led, by a gradual descent, into ner and another, each separated from the other assive stony partitions, which had been left to additional strength to the vaulted roofs. In some of the quarries the blocks of stone which had been quarried out lay partly dressed; in some the blocks were still attached to the rock; in some the workmen had just commenced chiselling; and in some the architect's line was distinct on the smooth face of the wall of the quarry. The mode in which the blocks were got out was similar to that used by the ancient Egyptians as seen in the sandstone quarries at Hagar Tilsilis and in the granite quarries at Syene. The architect first drew the outline of the blocks on the face of the quarry; the workmen then chiselled them out in their whole thickness, separating them entirely from each other, and leaving them attached by their backs only to the solid wall. They were then detached by cutting a passage behind them, which, whilst it separated the blocks, left them roughly dressed, and left the wall prepared for further operations. We remarked the similarity between the stones chiselled out in these quarries and the few blocks of stone built into the south-east corner of the wall of Jerusalem, which are so remarkable for their size, their weather-worn appearance, and the peculiar ornamentation of their edges. We spent between two and three hours in these quarries. Our examinations were, however, chiefly on the side towards the Valley of Jehoshaphat. Our guide stated, that more to the westward was a quarry of the peculiar reddish marble so commonly used as pavement in the streets of Jerusalem. From the place where we entered the descent was gradual; between some of the quarries, however, there were broad flights of steps, cut out of the solid rock. I had no means of judging of the distance between the roofs of the vaults and the streets of the city, except that from the descent the thickness must be enormous. The size and extent of these excavations fully bore out the opinion that they had yielded stones enough to build not only the Temple, but the whole of Jerusalem.

"The situation of these quarries—the mode by which the stones were got out—and the evidence that the stones were fully prepared and dressed before being removed, may possibly throw light upon the verses of Scripture in which it is said—2 Chronicles, ii. 18—'And he (Solomon) set three-score and ten thousand of them to be bearers of burdens, and forescore thousand to be hewers in the mountains, and three thousand and six hundred overseers to set the people at work.' And again—1 Kings, vi. 7—'And the house, when it was in building, was built of stone made ready before it was brought thither: so that there was neither hammer nor axe nor any tool of iron heard in the house, while it was in building.'

"In one of the quarries there was a spring of water. A recess in the rock and a shallow trough had been cut for its reception. The water was soft and clear, but somewhat unpleasant to the taste. The expenditure of our candles hastened our departure. We got out as we got in, unobserved. I had not another opportunity of visiting these quarries; but left Jerusalem in hopes that some one more enterprising and more able would explore and give a more detailed and accurate account of these excavation, which to me seemed so abounding in interest."

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 332.)

MOSES MENDENHALL.

Benjamin Mendenhall was one of the first settlers in Chester county. He was a member of our religious Society, and from the character of his children, we cannot doubt but that he and Ann his wife, were earnestly concerned to nurture them aright, and that through the Lord's assistance they had been enabled to train them up in his fear. Of his eldest son Benjamin we shall have occasion to speak hereafter. Moses, his second son, was born at the residence of his parents at Concord, in the year 1693.

Moses, when quite young, was visited by the Lord's Holy Spirit, and learned to love retirement, often seeking solitary places, where undisturbed, he might wait on his heavenly Father for a renewal of spiritual strength. He loved the company of religious men and women, such as preferred laying up treasure in heaven, to all the wealth and gratifications of this present world. About the year 1719, he married, and soon after removed to Kennett, where he abode during the remainder of his life. As he increased in years, he increased in wisdom and spiritual understanding, through obedience to the Divine will manifested in his soul, and through the openings of the Holy Spirit, from day to day. In the year 1724, he received a gift in the ministry of the gospel. Waiting on the Lord in his gift, his communications, which at first were in a very few words, were gradually enlarged, and through the baptizing power attending them, they were, his friends say, "seasonable" and "refreshing;" "often affecting the spirits of the hearers."

He was not, during the few years of gospel service, appointed him, drawn far from home in the ministry, yet he visited meetings in the Provinces of East and West Jersey, and in company with that mother in the Truth, Margaret Preston, parts of Maryland. As he waited on his Divine Master, he was concerned to visit neighbouring meetings, and his testimony was, as his friends say, "well received where his lot was cast." He was serviceable in the discipline of the church, rightly qualified and gifted therefor, being concerned that all things might be done decently and in order, and the government and authority of Christ, through the firmness of faithful men and women, might be brought over all offenders. There was "a spirit of undue liberty," prevailing on some about that time, which he, in the discernment and authority given him from above, bore testimony against. After his departure, his friends say, this spirit "manifested itself to the exercise of the faithful."

Having laboured diligently to fulfil the duty assigned him in the militant church, his master released him early from service. About the beginning of the Ninth month, 1731, he was taken violently ill, and his disease soon manifested itself to be the small-pox. He was sensible that the close of life was near, and expressed his thankfulness to his Almighty Preserver and Saviour, that he in wisdom and mercy was removing him "from the troubles of this world." He exhorted his friends to faithfulness, and with patience and resignation bore the great pain and bodily distress caused by his disease, until the hour of his release came. He died in the same month, aged about 38 years.

DAVID PALMER.

David Palmer, an elder of the Falls meeting, Bucks county, deceased Ninth mo. 10th, 1731.

SUSANNA WILKINS.

Of Susanna Wilkins, of Evesham, West Jersey, who deceased about this time, 1731 or 1732, we have little information. She had a valuable gift in the ministry, was useful in the discipline, and was, her friends say, "a zealous woman."

HOWELL POWELL.

Howell Powell was born in Wales, where he was

convinced of the Truth, and abiding faithful thereto, he received a gift in the ministry. He removed to Pennsylvania about the year 1714, and settled at Haverford. He was in good esteem, was useful in life, and died, his friends say, "in unity with us." His decease took place about 1732. He probably had been much confined with age or other infirmities, for we find no trace of his labours in Society, after the year 1730.

JOSEPH BOOTH.

Joseph Booth was born at or near Scituate, in New England, and was educated as an Independent. When Penn obtained his Province, Joseph Booth being then a young man, removed to Mispillion, in Sussex county, one of the "three lower counties," on the Delaware, and there took up his residence. Being a man of great intelligence and moral worth, he soon became very useful as a citizen, was made a magistrate, and was appointed a representative in the Assembly of the Province. In all his public appointments, he discharged his duty with fidelity, filling his stations to the benefit of Society, and to his own reputation.

Early in the Ninth month, 1699, Thomas Story, being on a religious visit, spent a night at the house of Joseph Booth, intending to have a meeting there the following day. Thomas Story says, "He did not profess with us, but was friendly; and asked me many questions concerning baptism, the supper, perfection, &c., all which I answered to his satisfaction; and next day after the meeting, he expressed his full convincement of what he had heard. But I found he stuck at the cross. He could not submit to the plain language of thou and thee to a single person, nor become unmodish in keeping on the hat, and declining the customary ways of address, nor break off that heathenish custom of calling the days and months by the names of their imaginary gods, which he thought too low for matters of religion; concerning all which we discoursed next morning as he set us on our way, and in some of these points he was better satisfied before we parted. Yet the cross was hard for him to bear in these small things; and why? Because submitting to the practice of them, immediately subjects a man to the scoffing and contempt with which we are treated by the world at this day, no way agreeable to the natural and carnal mind. And that which rendered things harder to him was, the station and character he supported in the world; for he was a justice of the peace, and the most sober and knowing person in those parts."

Joseph Booth had to suffer opposition from his wife, who was firmly persuaded of the necessity of water baptism, and was opposed to Friends and their doctrines. Joseph, willing to confess the truth, so far as he was convinced of it, told his wife "if she found him grow any worse for owning them, she might have cause to be troubled; but till, then, she would do well not to murmur."

As Joseph abode faithful in that he was convinced of, his mind became grandually opened to receive the whole truth, and he was strengthened to make a good confession before men. His friends say, "As he gave up faithfully to the manifestations of Truth, it so operated upon him, as to bring the creaturely part into true subjection, though much in the way of the cross." "As he yielded obedience to that divine power, he witnessed love so to prevail in his heart as in some time after to constrain him in a living testimony to declare to others what the Lord had done for them." His friends add, "he was one of the worthies, rightly called and anointed for the work and service of the day. In his public appearances, both in preaching and supplication, he was solemn and awful, ministering in the living power of Truth. He was a nursing father in the church, a constant attender of meetings, both for religious worship and discipline, very exemplary in humble waiting therein, and so continued until old age."

He was a principal instrument in settling the meeting at Motherkill, of which, when it was established, he was a member. He frequently visited the families of Friends in the neighbourhood of Cool Spring, much to their comfort, and at last had the satisfaction of seeing a meeting established in that place, also. Faithful in his private and public duties, labouring for the natural and spiritual good of his fellow creatures, he was generally beloved, and esteemed. He died about the year 1732, in a good old age, being gathered "to receive the reward of his faithful labours."

(To be continued.)

Canal Across the Isthmus of Suez.—This great enterprise, which, for many years, has seemed too visionary a project to be seriously entertained, is likely to prove not only practicable but to be actually realized. The commission of engineers and scientific men whom the Viceroy of Egypt appointed to examine and determine upon the practicability of uniting ocean to ocean by this means, have made a report, in which they declare that the canal could be built on nearly a direct route from Suez to the Gulf of Pelusium, with the Nile. The estimated cost is $8,000,000, and the construction will take six years. At Suez 25 feet of water will be found at the distance of 5,000 feet from the shore. The port to be constructed in the Gulf of Pelusium, which the former project placed at the bottom of the Gulf, will be located twelve miles to the west, on a part of the coast where the water is 25 feet deep at less than the distance of two miles from the shore, and where the anchorage is good, and getting under sail is easy. It is estimated that a saving will be made in distances between the respective places and Bombay as follows: Constantinople, 12,900; Havre, 8,928; London, 8,550; Liverpool, 8,550; New York, 7,317; New Orleans, 8,178. More than one half the distance is abridged between the principal ports of Europe and Asia by the proposed canal. This single fact shows its immense utility to all nations, as well as to Egypt and Turkey, and will secure for its projectors the best wishes of the civilized world.—*Ledger.*

Selected for "The Friend."

Mary Capper to Hannah Evans.

Birmingham, Second month 19, 1822.

My dear Friend,—I cherish the gladdening hope that thou wilt be here ere long, and am thinking of having a cleansing from the external defilement of smoke, &c., that no outward appearance may affright thee.

I think my soul longs for inward washing, purification and entire redemption from all that defiles the inner temple of the heart that the best of Friends may dwell there. This entire sanctification through the Holy Spirit, how wonderful, how important! yet how neglected by many! and how slow in its progress when we think we are earnestly desiring it! Day by day it seems in my view a marvellous work; and though at times I am cast down, I am not in despair for I know in whom I have believed; although for a season He seems to hide himself from our view, and then our hearts are sad, yet are we not kept from presumptious sins, meek and lowly? O! my precious friend, surely with some measure of experience we can say it is the Lord's doing; for our souls have been sore vexed. Thus I believe in our different allotments, the Father of mercies, God only wise, permits his children to be exercised and disciplined To be humbled and to keep humble, is not the w of human prudence. My dear love is to you a fellow travellers pressing after the mark. Be less we often tenderly sympathize with each ot we have all equal need to watch and pray cont ally; though there is a difference in circumsta situations and tempers; nevertheless all is sure up in this, a Saviour or I die, a Redeemer perish.

"There is a knowing of the Truth as it i Jesus, as it is in a Christ-like nature; as it is in sweet, mild, humble, and loving spirit of Jesus, w spreads itself, like the morning sun upon the s of good men, full of light and life."—*R. Bar*

THE FRIEND.

SEVENTH MONTH 5, 1856.

LONDON YEARLY MEETING.

(Concluded from page 336.)

"The Yearly Meeting came together at eleve terms of adjournment. Two brief religious municications preceded the opening minute. A Fr in the ministry afterwards addressed the meeti considerable length, in a series of observations general yet comprehensive character, appropria present circumstances; and which, it is to be h had a salutary impression, and will be attended good effect.

In answer to the usual inquiry, as to the p sentatives having been intrusted with any pr tions, it appeared that there was one from Quarterly Meeting of Kent, and one from Ba and Somerset, each desiring the sanction of Yearly Meeting for one of their respective Mon Meetings being held eight times in the year, ins of twelve. After some cautionary observations alterations were acceded to.

Afterwards came a proposition from York Q terly Meeting, in reference to the Society's rul specting marriage, which gave rise to a some protracted discussion.

On the face of the minute accompanying the position, there was the confession of want of nimity among Friends of the Quarterly Mee While this was freely admitted, it was state explanation, that there was no difference of opi among them as to the propriety of bringing the ter before the Yearly Meeting. A number of Fri were of the judgment, that, considering the intri and importance of the subject, and the lack o formation from York Quarterly Meeting, the p sition could not be entertained this year; b minute made, deferring the consideration of i next year. For the same reasons, other Friends a necessity for some endeavour being made no provide a remedy; at least, that the propos should be referred to the Large Committee, w report would come into this meeting, and woul commit the Society to any measure with which it not fully satisfied.

It should be stated that the proposition was fold, or embraced two descriptions of cases, vi permit marriages to be solemnized in our mee and according to our rules, wherein only one o contracting parties is a member, as also those wh neither party is in membership, provided the made the profession of Friends—it being, of co understood that they go through the same routi our members, in declaring their intentions befo Monthly Meeting, public intimation being giv

ntention, and their clearness of all other similar
ements inquired into and reported, before per-
n to celebrate the marriage is given. It may
ted further, in regard to the permission thus
t for by the parties referred to, that it was not
understood as conferring the right to mem-
p. Adjourned till four o'clock this afternoon.

ond-day afternoon, four o'clock.—Permission
sked and obtained for a Friend from Mel-
e to attend the meeting, and he was intro-
by Edward Sayce. Occupied till seven
hearing reports from the different Quarterly
ngs, in reference to the education of the youth,
members and those not in connection, but pro-
g with Friends. With one or two exceptions
reports were very brief, simply stating that
ubject had received attention. The report
Bristol and Somerset, however, was a very long
ntering most minutely into the details of the
which that meeting had taken, in pursuance of
early Meeting's minutes of last year on this
ct. The contents of this report gave rise to
continued remark, some highly approving of it,
it was pronounced by others unsound and
isfactory, besides there being no call for a
ment of that nature being presented to the Year-
eeting. Another question in connection with
eport was, whether it ought not to be sent into
omen's meeting, much being said in commenda-
of that course. This was, however, decidedly
tived. Next came the inquiry whether the Year-
eeting ought not to give the report an extended
icity, by sending it down with such minutes as
t be ordered? This was also decided against.
ly, a Friend wished to be informed if Bristol and
erset Quarterly Meeting might not be allowed to
it on their own responsibility. The same re-
was given to this as to the other inquiries, on
ground that the report being addressed to the
rly Meeting was their property, and no longer
of the Quarterly Meeting. Generally unsatis-
ory as was the report in question, it was no doubt
means of eliciting the expression of much sound
ment by way of correction. And it is much
e desired that the concern manifested on this
sion on behalf of those in the station of parents
hat they might be more alive to the responsibil-
nd importance of their position, and be incited
ncreased diligence and fidelity in the discharge
heir solemn duty, may have its due weight, not
on the minds of those who were privileged to
resent, but upon others—there being no ar-
gements for communicating religious instruction
ch could supersede, or so well supply, rightly
rcised parental concern and oversight.

While a pretty general impression appeared to
vail, that a necessity had arisen, owing to altered
umstances, for some further attention to the class
ose interests the minutes of last Yearly Meeting
in view, it was yet the conviction of a number
t, in the existing economy of the Society, as pro-
ed for and recommended in the *Book of Rules*,
emedy might be found sufficient for all emergen-
s; and an opinion was pretty strongly expressed
t it was less an increase of knowledge, either of
truths of Scripture, or of our individual duty,
t was awanting, than an increase of obedience to
convictions of the Light or Spirit of Christ in
heart, where He still teaches as never man
ght, all those who are willing to receive Him
this the way of His coming. It was by this means
at our Society was first gathered to be a separate
ople, and the alone certain way of witnessing a
vival, was by a recurrence to this, our great funda-
ental distinguishing principle.

The conclusion to which the meeting came was
bodied in a minute, continuing the subject under
the care of the Quarterly Meetings; requesting them to report again next year what farther they may by that time have accomplished in this particular.

The meeting then adjourned.

At seven o'clock the Large Committee assembled, agreeably to direction of the Yearly Meeting, and resumed consideration of the course best to be pursued with the epistle from Philadelphia. In the morning the meeting seemed quite prepared to nominate a sub-committee to essay an epistle in reply, had it not been the hour for the Yearly Meeting to sit down. On returning to the question, however, in the evening, a great difference of opinion was manifested from what had previously prevailed, and so much of accusation adduced against Philadelphia Yearly Meeting, both in regard to alleged doctrinal heresy, and violation of discipline, as while no objection to maintain a correspondence was made, its nature was to be different to what seemed to have been agreed on at the previous sitting. After nearly two hours' debate, it was concluded to set apart a sub-committee, leaving them at liberty so to frame the answer as to accord with the views expressed at this sitting—viz., that the only right way of preserving unity and harmony with Philadelphia Yearly Meeting, is to tell them what we take to be the truth, but yet to tell it them in love. A very large committee was accordingly proposed, consisting of upwards of twenty Friends, who were requested to meet upon the business intrusted to them to-morrow morning at nine o'clock.

Third-day morning, ten o'clock.—On the meeting settling down, the clerk was engaged in supplication. Three brief communications in the line of the ministry also preceded the opening minute. The business of this sitting was of a more varied character than some of the previous ones. Before the clerk got time to intimate what came first before the meeting, a somewhat desultory conversation began in regard to the minutes of the Yearly Meeting, on the religious over sight of youth, which was under discussion last evening, one Friend animadverting on what he thought an unsound sentiment of another, and that individual following in reply.

A series of observations was also made by a Friend, in reference to the same minutes, which, though appropriate and acceptable, seemed to open the way for so many more to speak, that it felt to many present as if we had spent too much time on a matter considered as closed at the preceding sitting.

The reports from our public schools were then brought forward. First came that for Ackworth, which gave a very favourable representation of the institution, as regards the progress of the children's education, and the health of the large family, though the finances were not in an encouraging state. The income had been considerably less for the year than the expenditure; the average cost had also exceeded that of two or three previous years, being within a trifle of £24. This difference, together with the decreased income, was satisfactorily accounted for. Along with the report, there was presented a minute from the adjourned General Meeting for the school, complaining of the state of ignorance in which too many children entered the institution, in regard to elementary religious knowledge. This minute gave rise to a somewhat tedious discussion, as to the best means for remedying what was complained of. For the Yearly Meeting to send down the minute in the shape in which it was presented, was seen to be inadequate for the purpose. For the meeting to refer the minute back to the School Committee, with instructions for it to prepare and bring to next General Meeting, for its adoption and distribution, an address to Friends upon the subject, was also seen to be unconstitutional, as the Yearly Meeting would thereby be made responsible for what it never had seen; although, in justification of such a procedure, it was argued, that as the Quarterly Meetings all sent representatives to the General Meeting, the proposed address might be expected to be one that this meeting could not hesitate to approve. This, however, was overruled, and the conclusion arrived at was to commit the minute as above suggested; but instead of Ackworth General Meeting issuing what might be presented for its acceptance, it was to bring it to this meeting next year.

The reports from the other schools succeeded, and occasioned but little remark. Their reception was minuted as acceptable to the meeting.

The difficulty of obtaining a sufficient number of competent teachers was alluded to, and some information communicated respecting the Flounders' Institute, as offering great encouragement to enter upon the highly honourable and most useful avocation of a teacher. At this institution, as is probably known to most readers of "The British Friend" a certain number of young men receive, gratuitously, a first-class education, expressly with the intention of qualifying them to become teachers; and it was thought very desirable that the attention of parents, who had families requiring to choose occupations, should be called to the advantages thus provided.

The Committee on Accounts produced a report, stating their having examined the same as directed, and gave a statement that they found them correctly kept. There appeared a considerable balance on hand; but a collection equal to that of last year was ordered to be made in all the Quarterly and General Meetings, to meet current and anticipated demands. The bequest of Alexander Morrison was acknowledged in the statement; and some account of himself, and what had induced him to make the bequest, seeing he was in no way connected with Friends, was communicated by James Bowden, and was interesting to the meeting. The particulars having been recently given in this paper, need not here be repeated.

A minute from the Meeting for Sufferings was next read, in reference to a subject committed to it by last Yearly Meeting—the mode of answering the queries. The proposal contained in the minute was referred to the consideration of the Large Committee; and the business of the sitting terminated with reading the report on the stock of books under care of the Meeting for Sufferings.

Adjourned, near two, till four o clock this afternoon.

Third-day afternoon, four o'clock.—The first business taken up at this sitting, was another minute from the Meeting for Sufferings, accompanied with a report on the subject referred to their consideration by last Yearly Meeting, viz., the alteration in certain of the Society's rules in regard to marriage. A draft of the mode of procedure proposed to supersede the present was submitted, and after some explanations, adopted; together with a minute of advice on the general question of marriage. Some slight alteration in marriage certificates being thus rendered requisite, a committee was appointed to consider the subject, and report to a future sitting.

The change in the rules above referred to, consists in simplifying the procedure in presentations of marriage; requiring the man only to appear personally before his own Monthly Meeting, and verbally to declare his intentions. A certificate signed by the woman Friend, and duly attested, is to suffice on her part. Where parties belong to the same Monthly Meeting, the men's meeting is to make an appointment as at present, and inform the women's meeting of the case, which is to make a similar appointment, reporting the result of inquiry to the men's meeting; when, if no obstruction offers, the parties are to be set at liberty to solemnize their marriage.

Where the parties belong to different Monthly Meetings, the course of procedure is the same as regards the man; the Monthly Meeting in this case having to send a notification to the Monthly Meeting to which the woman belongs—that meeting to acquaint their women's meeting, whose duty will be the same as at present. The woman's Monthly Meeting, on receiving information from the meeting to which the man belongs, that he is clear of all similar engagements, is then to liberate the parties as at present.

The report of the committee of the Meeting for Sufferings, appointed to correspond with Friends in foreign parts, was listened to with much interest. The most striking feature in the account, was that respecting the two months' meeting at Stavanger, which, it was stated, had admitted fifteen individuals into membership, in the course of the year.

William Tanner, in a letter to the Meeting for Sufferings, which was also read, gave some additional and very interesting and encouraging intelligence respecting Friends in Norway—the result of his observation in the religious visit he paid them last year.

Adjourned, near seven, till four o'clock to-morrow afternoon; Meetings for Worship, as usual, to occupy the forenoon.

The Large Committee immediately came together, to deliberate upon the proposition of York Quarterly Meeting. A representative from that Meeting, in a lengthened line of argument, adducing striking statistical information, made out a strong case in favour of what the proposition suggested. His speech having occupied nearly an hour and a half, and some Friends being anxious to express their sentiments, the meeting adjourned the further consideration of the subject till another opportunity.

Fourth-day afternoon, 5th Month 28th.—Met at four o'clock The meeting of the Tract Association was fixed to be held at nine o'clock to-morrow morning (Fifth-day.)

The propriety of the Yearly Meeting adopting a petition to the Legislature in favour of the abolition of capital punishments, was brought under consideration at this sitting. Friends appeared very unanimous in regard to such a petition, with two, or at most three exceptions. One of the dissentients said that this was not an article of the Society's faith on which we were united, as in the peace or slavery questions, and that we were not prepared to petition in a Yearly Meeting capacity. Another expressed his hope, that the committee appointed to bring in the draft of a petition would not take the high ground of Scripture authority, as opposed to the punishment of death. While disapproving of this last penalty of the law, he thought there were sufficiently strong reasons against its infliction, without having recourse to Scripture in support of its abolition. He was not prepared to say that there had not been cases, or that such might not again occur, in which this punishment was justifiable. His reason for such belief being this, that he could not dare to be wise above what was written, and that he might not differ from an inspired apostle, who said the magistrate did not bear the sword in vain. He could not, therefore, unite in a petition taking the high ground of Scripture on this subject. On the other side it was maintained, that Friends were as unanimous herein as they were on the unlawfulness of war and slavery, and that no petition ought to go from the Yearly Meeting which was not based on the inviolability of human life under the gospel dispensation. Those who thought differently were, of course not expected to sign the petition. After the conclusion was come to that the petition should be prepared, a proposal was made and about to be adopted, chiefly with the view of saving the time of the meeting, to commit the preparation and presentation of the document to the Meeting for Sufferings. This course was, however, objected to, and the original proposal adopted, viz., that the petition should be the act of the Yearly Meeting itself, as likely to be more impressive. A committee was thereupon named, to prepare and bring in the petition to a subsequent sitting.

Proceeded with reading certain selected minutes of the Meeting for Sufferings, embracing epistles from the committee of that body appointed to correspond with Friends abroad—one addressed to the four meetings in South Australia, and another to the meetings in Van Dieman's Land. These were followed by the reading of a letter from Robert Lindsey, addressed to the Meeting for Sufferings, and giving a narrative of the religious visit in which he had been engaged since 1852 to the beginning of the present year, to South Australia, Van Dieman's Land, New Zealand, South Africa, &c. The letter was listened to with deep attention, as were also his own verbal additions; from both of which sources the meeting was put in possession of more ample information concerning our members, and those connected with Friends in those colonies, than had previously been communicated; and much sympathy was awakened in their behalf.

Further information was obtained from Edward Sayce; also from Charles Mould, the Friend already alluded to as having come from Melbourne, and who was allowed to be introduced into the meeting. The trying circumstances in which the meetings in South Australia are placed, in regard to the number of members requiring pecuniary relief, and there being comparatively few able to contribute, presented a strong claim upon the liberality of Friends in this country; more especially as a large proportion of those requiring relief were members of English or Irish Monthly Meetings, upon whom our Friends in these colonies had never yet made any demand. It was suggested that the national stock would be well applied in rendering the needful assistance; but the propriety of such an application of that fund was disputed, and it was left to the liberality of individuals to assist our Friends abroad, both in the support of the poor, and to defray the rent of a place where they may hold their meetings for worship, present circumstances making it unadvisable to think of building a meeting-house. Intimation was then given, that a subscription paper lay in the clerk's office, on which such as inclined might put down their names and offerings.

A message came from the women's meeting, stating that Priscilla Green, who had received a certificate for religious service in America, was desirous before leaving to have a meeting appointed for the young, and requesting the concurrence of the men's meeting. Unity being expressed with her concern, it was agreed that the meeting should be held on Sixth-day evening, at six o'clock, in Devonshire House.

Adjourned to half-past ten to-morrow morning.

The Large Committee sat down directly, and resumed consideration of the proposition from York Quarterly Meeting.

A Friend belonging to that Quarterly Meeting spoke at considerable length *against* the proposition, and chiefly by way of reply to the arguments adduced the previous evening by another Yorkshire Friend in support of it. To give a detail of what these, the two principal speakers, advanced, would far exceed our limits. Still less could we find room for what was argued *pro* and *con*, by the many others who spoke upon the question.

After hearing both parties, it was very difficult to determine on which side the sympathy preponderated; but as the difficulties and intricacie the subject seemed to grow with the discussio became obvious that no united decision coul arrived at now, while further debate gave little mise of facilitating a mature judgment. The cl therefore, prepared a minute to inform the Ye Meeting, that after solid deliberation, it had cluded to recommend that the question shoul deferred till next year.

The committee then adjourned.

Fifth-day morning, 29th of 5th month, h past ten.—The forepart of this sitting was occu with ministerial communications, partly addre to the youth, and in part bearing on the gen state of Society, as previously brought under view, by the answers to the queries.

Before the clerk got proceeding with the b ness, Richard Estherbrook said he believed it m be in the way of his religious duty, to pay a to the women's meeting; and his concern be united with, he was encouraged to attend to service, John Dymond and Robert Were Fox companying him.

The clerk thereafter took up some additional lected minutes of the Meeting for Sufferings. first embraced a report of the committee, in re ence to the circulation of the Address to Soverei on the subject of Slavery. The attention of meeting being thus called afresh to this impor concern, it was agreed that a paragraph in refer to it should be inserted in each of our epistle America. It was suggested that the sub-commi should attend to this, but it was thought better a few Friends of the meeting to prepare a paragr and submit it to a future sitting. The subject pearing not to have been noticed in the gen epistle for some years, it was deemed desirabl have an allusion to it this year; and it was refe to the committee engaged in the preparation of t document, to attend to this suggestion.

A second minute brought forward a report the Negro and Aborigines' Fund. It appeared this fund, which had been collected in 1851, amounting to something like £2600, was now hausted, except a small balance of £50 or £ The fund having been of great service, and th being a wide field for continued extension of sistance in the same direction, it was agreed to r another fund of equal or greater amount, an subscription paper was to be laid on the cle table for the purpose, besides the Quarterly M ings being requested to collect and remit the amo of their contributions to their respective corresp dents in London.

It was remarked, that the way in which this fu had been appropriated, was chiefly in supplying means of education to the negro and aboriginal habitants of our colonies; and this being also only way open for Friends contributing to the ca of missions, in consistency with our religious pr ciples, the hint was thrown out that the contri tion ought to be on a liberal scale. The for fund, collected five years ago, gave only about £5 per annum for this great object; and this, it observed, was but a small sum for our Society devote in this direction.

Another minute of the Meeting for Sufferi taken up at this sitting, had reference to a publi tion undertaken by that body, entitled *A plea Religious Liberty, or Liberty of Conscience;* whi it appeared, had been a concern of our late fri William Forster, and which, the recent assembl of the plenipotentaries at Paris seemed to rende suitable time for issuing. The publication, w sundry minutes respecting it, was read; and w some brief addition, adopted by the meeting. Th was a full and free expression of approval of t

and the time chosen for bringing out the cent was considered most opportune. A deon of the Meeting for Sufferings had proceedh it to Paris, and presented the different repreves of the powers assembled at the Peace ess with a copy of the *Plea*. A detail was of the reception which the deputation met rom the various plenipotentaries, which was d to with great attention.

Yearly Meeting came to the conclusion to the document, leaving it to the Meeting for ings to print and circulate it yet further the other European powers, as also among vn members.

report from the Committee on Epistles was in reference to the conclusion to which it had d, in relation to the proposition from York erly Meeting, on the subject of marriage. The recommended that the consideration of the sition should be deferred till next year, in the Yearly Meeting unanimously concurred.

attendance of any of our members at the y to be made in the parks, &c., this evening, ebration of the peace, was discountenanced in ionate terms, and the meeting adjourned till n o'clock, to-morrow forenoon.

e Large Committee, it was arranged, should vn at five this afternoon.

fth-day evening, five o'clock.—The Committee pistles assembled in the large meeting house, ld one having been found frequently too small. e first business on this occasion, was the te on the mode of answering the queries, and red to the committee by the Yearly Meeting consideration. It gave rise to much verbal ism, and ultimately passed with little altera-

As it will no doubt be sent down into the ties, it seems scarcely needful to allude to its nts in this place, further than to state, that it ribes the course to be pursued in making exons in the answers. It is to be understood the Yearly Meeting "discourages" bringing ard specific exceptions on suspicion, or in cases e the supposed offender has not first been alt with in privacy and tenderness," in accordwith the spirit of the precept in Matthew xviii. 17—"If thy brother trespass," &c. Read and roved with little alteration, the paragraph on ery intended for insertion in each of the Amen epistles.

he draft of the epistle to North Carolina, and hat to Ireland, were also read and approved; n the committee adjourned till half-past nine torrow morning, having sat upwards of three hours.

Sixth-day morning, 5th Month, 30th.—The ge Committee, as also that on the General tle, met at half-past nine.

he Yearly Meeting assembled at eleven. After ling the register for young men, &c., the petition Parliament for the abolition of capital punishts came under consideration. It was again opd, on the ground already stated; but by so y few individuals, that the Yearly Meeting, after ole expression of most cordial concurrence, adopt-t. In order to insure as extensive signature as sible at this advanced stage of the proceedings, petition was to be in readiness for that purpose the adjournment of the meeting.

At a former sitting, a small committee was apnted to revise the form of marriage certificate, h a view to the suggestion of such alteration as new rules, in regard to the mode of presentation marriage, rendered necessary. The committee orted having attended to their appointment, and duced an amended form of certificate, which was eptable; and it was left to the Meeting for fferings to carry the amendment into effect.

The said committee had, at the same time, revised the new rules which had been previously brought in, and suggested some slight verbal alterations, and these being considered improvements, were adopted. The time agreed on for commencing the new mode of procedure was fixed to come into operation on the 1st of 9th Month next.

The minute of counsel in reference to marriage, which, as already stated, had been originally introduced appended to the rules, but agreed to be issued separately, came again under review, and it was thought a preferable course to withhold it, leaving the Meeting for Sufferings to have it annexed to the general advices.

A short minute from the Meeting for Sufferings was then read, intimating that John Hodgkin had been commissioned to lay before Friends a statement respecting the present position of that body. It was somewhat to this effect, that the time seemed to have arrived for the Yearly Meeting to undertake a consideration of the constitution of the Meeting for Sufferings, with a view to some improvements therein. The original object of that meeting having long ceased to require attention, it was suggested that another name might be found, by which it might be more appropriately designated. While no complaint was made of the duties being too onerous for those upon whom they chiefly devolved, yet to show how much the basis of the Meeting for Sufferings had in course of time been narrowed, it was mentioned by John Hodgkin that the Quarterly Meetings had been reduced in number by various causes, such as amalgamation, &c., from thirty-four to twenty-three.

The introduction of the subject occasioned a good deal of remark, and led to the correction of some misapprehensions in reference to the constituency of this standing committee of the Society, and many Friends expressed their sense of obligation for the very efficient and valuable services which it had rendered to the body.

It was finally concluded to recommend the Meeting for Sufferings, to request the various Quarterly and General Meetings to appoint representatives to a conference to be held in London, at such time as might be deemed most suitable; when the whole question as now submitted, could be considered, and a report, presented to this meeting next year; it being understood that the present members of the Meeting for Sufferings were to be entitled, *ex officio*, to seats in said conference.

Adjourned, after sitting nearly four hours, till eleven o'clock to-morrow morning.

The meeting appointed for Priscilla Green, being to take place at six this evening, the Yearly Meeting did not assemble. Two committees on epistles, and the Large Committee, however, had sittings, and the latter adjourned till nine in the morning.

Seventh-day morning, 31st of 5th Month.—The Large Committee sat down at nine. The Epistle to Philadelphia was read, and passed with little, if any, alteration. The General Epistle was also read a first time. Adjourned till such time as the Yearly Meeting should direct.

The Yearly Meeting convened at eleven o'clock. Some routine business, usual at this time, and embracing information as to the discontinuing and establishing of certain meetings for worship, and the calling over the list of correspondents, having been disposed of, the replies to various epistles were proceeded with. They elicited very little comment, and were mostly signed, with only a few verbal alterations. Adjourned till four this afternoon; the Committee on Epistles to come together at the close of this sitting.

Seventh-day afternoon.—Met at four o'clock. The Epistle to Philadelphia not having been overtaken at the forenoon sitting, was now read, first, as it had passed the Large Committee, then with an alteration, which the Friends who had prepared it thought would be an improvement. Friends seeming generally to consider it in this light, the epistle, so altered, was therefore adopted and signed.

The epistles to the other Yearly Meetings in America very were much of the same tenor as usual. The one to Philadelphia, however, being of a different character, it may be well to state, what are its distinguishing features. When the epistle from that Yearly Meeting was read, it will be seen from the foregoing narrative of proceedings, that allusion was made to the nature of its contents. It being somewhat accusatory of Friends in this country, in regard to the divisions among our Yearly Meetings in America, a reply or acknowledgment was not matter of course, as with the epistles from other places; but the Yearly Meeting directed the Large Committee to take into its consideration whether any notice should be taken of it at all. As already mentioned, the committee did discuss that point, and concluded to send a reply. The prevailing disposition originally apparent was to couch this reply in general terms, expressive of our brotherly affection, avoiding all reference to disputed points, and every word that might have an irritating tendency. But at a subsequent sitting of the committee, this course was disapproved of, and it was averred that if we wrote at all, we could not but employ the language of remonstrance and self-vindication. This decision was agreed to, and a very large sub-committee appointed to prepare an epistle of the tenor herein indicated.

In addition to what has already been stated as the contents of the epistle from Philadelphia, it may here be remarked that the passage which felt most obnoxious to many, was one which averred in substance, that the dissemination of unsound doctrinal works among Friends in America, and written by our members, was the original and chief cause of the divisions among the Yearly Meetings in that country.*

The epistle, in reply, quotes this passage, and says it has led this meeting to recur to the correspondence which took place between Friends of Philadelphia and this country in 1846, at the time of the secession in New England, and to a reiteration of our doctrinal belief then issued, as harmonizing essentially with that of our early Friends; and that we are thus entitled to cast from us, with boldness and firmness, all imputation of departure from the primitive faith of the Society.

Whether the passage above alluded to and answered, was meant to convey an opinion simply as

---

* In order that our readers may be under no misapprehension respecting this passage, we give it below. [Ed. of Friend.]

"The support of the doctrines of the gospel, under the quickening influence of the Holy Spirit, as held by our Society from the beginning, is a high responsibility placed upon it, and whenever any innovations may be attempted, those who are alive to their importance, as they are faithful, should humbly endeavour to guard the Society against them: without desiring to reiterate what has been often said, we believe that the dissemination of sentiments at variance with our doctrines, have been the primary cause of the difficulties now affecting the peace of the Society. May the Lord Almighty, in the riches of his mercy, again cause his divine, all-searching light, so effectually to visit every heart, as to show every one by what Spirit he is actuated; humble all at the feet of Jesus, and again bring the whole body into the precious unity of the Spirit. May we all realize the prayer of the Mediator for the believers on him, 'that they all may be one, as thou, Father art in me, that they also may be one in us,' and be renewedly qualified to show forth the glory of the gospel of Christ, in word, in conversation, in charity, in spirit, in faith, in purity."

to the causes of division, and not an accusation against Friends of this land, seems worthy of serious reflection. If the latter, then it may have been rightly treated; but if only the *former*, our Friends of Philadelphia may be ready to enquire why we were so anxious to cast from us an imputation which they did not intend to bring against us.

The paragraph prepared to be added to the epistle after it had passed the Large Committee, and which seemed to be generally considered an improvement, was somewhat to this effect—but having been read only once, the following may be a very imperfect outline:—In allusion to what Friends of Philadelphia, assign as the cause of the unhappily divided state of the Yearly Meetings in America, our epistle expresses the belief, that a critical examination of isolated passages from the writings, whether of English or American authors, and the diffusion of such criticisms by means of officials printed documents, or through periodical publications, was injurious both to the peace of the Society, and hurtful to all who undertook such a work; as it was to be borne in mind, that some of the writings thus criticised, had not received the sanction of the body.

Even after the epistle was thus amended, some Friends felt that it scarcely met their views; because, while especially careful to repudiate the charge, if charge it be, of our having departed from the established faith of the Society, this reply to Friends of Philadelphia passes over unnoticed, their objection to our procedure last year in regard to Ohio. And again, while very explicit in condemnation of criticism on a certain class of writings, because of its hurtful tendency upon those undertaking it, as well as regards the harmony of the body, there is not, at the same time, in the reply, an equally explicit expression of disapproval of the writings subjected to this ordeal; leaving it thus to Friends of Philadelphia, and, it may be, others also, to infer, that our *safety*, individually and collectively, lies in allowing some members to differ as much as they incline from our established authorities; and our *danger*, in allowing other members to stem the diffusion of what they deem heresy, by pointing out when those authorities are impugned. If Friends of Philadelphia should take this as the mind of London Yearly Meeting, it is to be feared our epistle will not draw the bonds of amity between us closer than they now are. As a whole, however, the epistle breathes so loving and tender a spirit, and, in our apprehension, manifests so strong a desire to avoid giving offence, with an equally strong anxiety for our uninterrupted harmony with Friends of Philadelphia, and for their reconciliation with the other Yearly Meetings in America, that it is earnestly to be hoped both objects may be promoted by the epistle now issued.

The General Epistle was then read, and with little alteration adopted. In the concluding minute, there was an appropriate record made of the grateful feeling entertained for the extension of Divine favour during the session, and the prevalence of so much brotherly love and condescension—under which feeling, and after a solemn pause, the meeting separated."

SUMMARY OF EVENTS.

EUROPE.—Liverpool dates to the 14th ult. have been received. On that day the steamer Fulton arrived at Southampton, with Crampton on board. The official notice of his dismissal arrived by the same vessel. Lords Palmerston and Clarendon, stated in Parliament on the 13th, that the dismissal of the American Minister had not been decided on. Lord John Russell gave notice of a motion of inquiry into the intentions of government, inasmuch as the feelings of the people were in favour of peace. The cities of Liverpool and Manchester have issued peace addresses to the citizens of America. The Manchester address received 8,000 signatures in a few hours. It is said that a number of ships of war will be sent forthwith to the American coast. A public meeting had been held at the Mansion House, London, in aid of the sufferers by the inundation in France. The Lord Mayor announced that he had already received between four and five thousand pounds. Dr. Palmer, the poisoner, was executed on the 14th. A Paris letter asserts that Dillon, lately appointed French Consul at Port-au-Prince, has instructions to intimate that France will not permit the Emperor Soulouque to invade Dominica. At Constantinople, on the 2nd inst., a report was spread that the Russians had destroyed the fortress Ismael and the defences of the city of Kars. The French civil officers will be charged with the organization of the customs duties in the Turkish Empire.

Liverpool Markets.—Cotton has declined $\frac{1}{4}d$. Sales of the week, 45,000 bales. Breadstuffs continued firm in price, but transactions moderate. Good Ohio flour was quoted at 35*s*. 6*d*. a 37*s*. 6*d*.

London Market.—The money market is easier. The bullion in the Bank of England had increased. Consols 94 a 94$\frac{1}{2}$.

Nicaragua.—At latest dates all was quiet at Nicaragua. Guatemala had sent an army against Walker, but being reduced by desertion from 3000 men to 500, before crossing the boundary of the State, the General deemed it most prudent to withdraw and return to the capital. The Costa Rican army had been disbanded. Cholera was prevailing throughout the country.

UNITED STATES.—*Congress.*—The Senate has adopted a resolution directing the committee on the judiciary to examine the laws regulating the succession to the presidency in case of the death of the president and vice-president; and, in case they deem further legislation on the subject necessary, to report by bill or otherwise. The rules of the Senate were, on motion, so amended as to make it the duty of the chair to call senators to order whenever they violate parliamentary decorum. The Senate has passed the bill for the construction of a military road from Missouri, via Great Salt Lake city, to the Carson Valley settlement, on the frontiers of California, and for the establishment of military posts and the protection of the thereupon; and one from the House, authorizing the president to cause the southern boundary of Kansas to be marked; also the bill respecting the harboring of deserters, and to protect the public interests in regard to the enlistment and discharge of minors. The House bill, establishing two additional land districts in Minnesota, passed finally. The Senate also passed a joint resolution appropriating $40,000 for the purchase and restoration to the British government of the ship Resolute, late of the British navy, which was abandoned by the Artic Expedition, and found by the crew of an American whaling ship, by whom she was brought to this country. In both Houses the Kansas question continued under discussion. The Investigating Committee have returned and appeared in their seats. It was expected the bill for the admission of Kansas with the Topeka constitution would pass the House, but not the Senate. The bill authorizing the people of Oregon to form a constitution and state government, has been under consideration in the House of Representatives. The Committee on Territories, reported a bill to punish and prevent the practice of polygamy in the territories of the United States, providing a penalty of $500, and imprisonment for not less than two, nor more than five years.

Kansas.—On the 26th ult., Gov. Shannon arrived at St. Louis to meet his wife. He reported all quiet in the territory, to which he intended to return in a few days. He denied any intention of resigning his office. A company of emigrants from Chicago, 77 in number, were stopped at Lexington, Missouri, and compelled by the citizens to surrender their arms before proceeding to Kansas. Each man was provided with a loaded carbine with bayonet attached. Col. Sumner has the principal roads guarded, to prevent any armed bodies from passing, and was putting under arrest those implicated in the late outrages. He had driven Buford, Jones, and other leading Missourians out of the territory.

The Indians.—A despatch from Fort Kearney, states that the Cheynee and Sioux had joined, and proclaimed war against the whites.

California.—On the 28th ult., the steamer Illinois arrived from Aspinwall, with 924 passengers, and $2,270,868 in gold, on freight, and a large amount also in the hands of passengers. The Illinois brings two weeks later news from San Francisco. Casey and Cora were executed on the 22d of Fifth mo., the day of King's funeral, in accordance with the sentence of the Vigilance Committee. The place of execution was surrounded by two thousand bayonets. On the 2nd ult. the friends of "law and order," or those opposed to the Vigilance Committee, held a meeting in the Plaza, which was attended by about two thousand persons. Resolutions were passed calling on the people to resist the Committee. All the newspapers but one side with the Vigilance Committee, and their proceedings seem to be approved by the people generally. Several desperadoes had been arrested in their order, one of whom, known as Yankee Sullivan, committed suicide in his cell at the Committee rooms. On the 5th, the remainder of the men, seven in number, were sent off in irons to a vessel in waiting for them, their destination being some of the islands in the Pacific. On the 3d the governor issued his proclamation, declaring the country in a state of insurrection, and authorizing the raising of an army to preserve law and order. The Governor's efforts, it was supposed would amount to nothing, as the Committee have 5000 men fully armed and equipped, and assistance from all parts of the State is freely offered them in their efforts to rid the city of the gamblers and desperate characters, who have long infested it. The accounts from the mining regions are still favourable. The growing crops promised remarkately well. Gold was abundant in San Francisco, and continued to arrive freely. The rate of interest was from 2 to 2$\frac{1}{2}$ per cent. per month.

Philadelphia.—Mortality last week, 215. The deaths in this city from First mo. 1st, to Sixth mo. 28th, inclusive, numbered 5,366, of which 2,749 were males, and 2,617 females; 2,596 were under five years of age.

New York.—Mortality last week, 372.

Miscellaneous.—*A steamer from the Mississippi to Michigan.*—The Green Bay Advocate of the 19th announces the completion of the Fox River Improvement and the passage of the steamer Aquilla from the Mississippi river to lake Michigan. This is a great event in the history of the Northwest, and one which will immediately rate a new and great era in lake and river commerce.

The Sugar Trade.—The New Orleans Crescent gives a statement of the prices in New Orleans for three years, showing a remarkable rise in price, which much more than compensates for the falling off in quantity:—

June 20.	1854.	1855.
Common Sugar. . . .	1$\frac{1}{2}$ a 2$\frac{3}{4}$	4 a 5
Fair to Fully Fair, . .	3 a 3$\frac{3}{4}$	5$\frac{1}{4}$ a 5$\frac{3}{4}$
Prime and Choice, . .	4$\frac{1}{4}$ a 5$\frac{1}{4}$	5$\frac{3}{4}$ a 6$\frac{1}{2}$
Molasses.	11$\frac{1}{2}$ a 12	25 a 29

The total production of sugar in the world was estimated, in 1854, at 1,400,000 tons, of which Louisiana furnished 220,000 tons. In 1855, the Louisiana crop fell to 173,000 tons; that of 1856 is estimated at 125,000 tons.

The Trade of Algiers with France is worth every year 120,000,000 francs. In 1853, the colony shipped to different French ports, 1,000,000 hectolitres of grain, and the following year 2,000,000. The French government is endeavouring to improve the agriculture and develop the resources of the colony.

The Voluntary Contributions of the people of the United States to religious and benevolent institutions, are among the most gratifying evidences of modern enlightenment. The receipts of nineteen of these associations, for the year ending Fourth month last, were $1,840,823, being an increase of 207,943, upon the receipts of the previous year.

Value of Coolies.—A Havana (Cuba) Price Current is noticing the sales of the week previous to the 8th, mentions 327 Asiatics from Hong Kong, China, distributed among sub-contractors—value $180 each.

American Rifles for England.—An order for 20,000 American rifles, is in course of execution at the extensive works at Windsor, Vt., and is now probably completed. Another order for 10,000 Sharpe's rifles also on account of parties in England, is in course of fulfilment at Colt's factory, in Hartford.

WANTED.

A Female Teacher is wanted for Friends' School at Crosswicks, N. J. Early application may be made to

JOEL H. MIDDLETON, Crosswicks, N. J.
Or, SAMUEL ALLINSON, Jr., Yardville, N. J.

DIED, after a short illness, on the 16th of the Sixth mo., 1856, in the 43d year of his age, WILLIAM MECUM, a member of Woodbury Monthly Meeting of Friends, N. J. In the death of this dear friend, a memorial to the christian character in his daily unobtrusive walk amongst men, lives in the remembrance of those who had an opportunity of being witnesses thereof. The sure promise is, that the memory of the just is blessed.

From Chambers' Journal.

The Fair of Nishnei-Novgorod.

here are two Novgorods in Russia—one Nov- d-Veliki, or the Great Novgorod, the other, nei—or, as it is spelt in Russian, Nishnyi— gorod, that is, the 'Lower Novgorod.' The ner, as we all know, lies not very far from the f of Finland; the latter is situated between cow and the Siberian frontier, on a fine trian- ar height at the junction of the rivers Oka and ga. It is the capital of an important govern- nt of the same name; and, from its position, not r admirably adapted to the pursuits of com- ce, but so commanding and so central in regard Asiatic and European Russia, that Peter the eat, as appears from a plan which has been dis- ered in the imperial archives, at one time in- led to make it the seat of the capital of his pire, instead of founding St. Petersburg in the shes of the Neva.

The city,' according to Cochrane, who visited hore than thirty years ago, 'is large, scattered, somewhat ill built, but evidently improving. e upper part, in which the governor, chief of- rs, and military reside, is, of course, the best. situation is peculiarly pleasant and airy, though rounded by the stubborn remains of the old del and Tartar wall. The lower town, which y be termed the St. Giles's of the city, is occu- d principally by persons engaged in merchan- e.' The prosperity of Nishnei-Novgorod has, ce those days, been yearly on the increase; but s not of the city we intend to speak, but of the r, to which it owes its renown.

And where is this fair? We have already passed e city-gates, but no symptom of any such assem- ge of men or merchandise has yet revealed it- f to our vision. We must turn from the town d its suburbs, for in neither of these is the fair to held; and leaving the Volga, that most majestic Russian rivers, proceed to its tributary, the Oka; d there, on a low, almost inundated flat, exposed the waters of both rivers, we behold a scene of stle and activity unparalleled in Europe.

A vast town of shops laid out in regular streets, th churches, hospitals, barracks, and theatres, s before us, now tenanted by more than 100,000 uls, but destined in a few weeks to be as dead d silent as the grave; for when the fair is over, t a creature will be seen on the spot which is ow swarming with human beings. Yet these ops are not the frail structures of canvas and rope with which the idea of a fair is inseparably associated in our own merry England. They are here regular houses, built of the most substantial materials, and are generally one story high, with large shops in front, and sleeping-rooms for the merchant and his servants behind. Sewers, and other means of maintaining cleanliness and health, are provided still more extensively than in the regular towns of Russia.

The business of the fair is of such importance, that the governor of the province, the representative of the emperor himself, takes up his residence in the midst of it during the greater part of the autumn. There is a large handsome palace built for him in the centre of the scene of traffic, which accommodates a train of secretaries and clerks numerous enough to manage the revenues of a kingdom. Strong posts of military are planted all round, to keep down the unruly whenever they show signs of an inclination to indulge in a little gratuitous rioting; while the Cossack police continue always on the look-out for thieves, who, notwithstanding their vigilance, still contrive to reap a very tolerable harvest from the unwary in this not very select community.

It is from the heights of the Kremlin, or citadel of Nishnei-Novgorod, that we command the most imposing view of the great fair. Casting a look over the two arms of the Oka, which lies beneath us, to a spot situated at the distance of about a mile from where we stand, our eye can clearly trace the connecting-link of men and carriages, rushing like mighty waters hither and thither along the causeway, and over the long wide bridges of boats from the city to the mart, and from the mart to the city. Just under us, lies a steep and difficult slope, leading to the banks of the river, and lined with a skirting of good and substantial houses. This slanting street, forming thus an inclined plane from the town to the water's edge, is filled with a countless throng from morning till night—carriages, wagons, droskies, and pedestrians uniting to form the only scene—except, perhaps, the Toledo of Naples—that can be at all compared with the crowds of Fleet Street or Cheapside.

On passing the last bridge of boats, we find ourselves on the threshold of the fair. This part is generally crowded with labourers looking out for employment, and Cossacks among them to preserve order. Then come lines of temporary booths, displaying objects of inferior value for the lower classes—such as beads, trinkets, and especially caps. Of these there are a great variety—round turbans from Astrakhan, the best furnished by the lamb of the large-tailed sheep imported from Crim-Tartary; high black Kirghiz bonnets, made of stuff resembling hair; or flat gold-figured cowls from Kasan.

The entrance to the fair is always crowded, but not with the dirty, dingy crowd of a European city. Here is sufficient material for the ethnologist to spend his time and study on for a twelvemonth or more; for if that erudite gentleman only secure a resting-place and shelter under one of the many booths skirting the entrance to the fair—no easy matter where thousands are rushing like bubbles to a whirlpool—he will look upon costumes and faces more varied and grotesque than are elsewhere assembled within so small a compass.

That white-faced, flat-nosed man is a merchant from Archangel, and comes with furs; he is followed, perchance, by a bronzed, long-eared Chinese with tea, who is again followed by a pair of lozenge-eyed Tartars from the Five Mountains; then there pass a group of youths, whose regular features bespeak the high Circassian blood, and contrast most forcibly with the appearance of those Tartar pedlers who hawk about muslins on their arms. Cossacks, freighted with hides from the Ukraine, are gazing in mute astonishment on their brethren, who have come with caviar from the Akhtuba, a river of Asiatic Russia, which, issuing from the Volga, about twelve miles above Tzaritzin, joins it again, like a dutiful offspring, on its passage to the Caspian Sea. Then there saunter past, with long robes and flowing hair, Persians bearing rich perfumes for the boudoirs and toilet-tables of the Russian grandees; while Kujurs from Astrabad—that long, narrow, sandy tongue of land which, on the north-east coast of the Crimea, encloses the western side of the Putrid Sea—and Turkomans from the northern bank of the Gaurgan follow in succession. Interspersed among the crowd, we see Bashkirs from the Ural Mountains, who seem far away in thought among the hives of their native cottages; while the stalwart Kuzzilbash from Orenburg, looks as though he would rather be listening to the scream of the eagles in chase, than to the roar of this sea of human tongues.

Glancing in another direction, the spectator beholds a Greek from Moldavia dangling a rosary from his fingers, and treating about it with a Calmuck as wild and agile as the horses amongst which he was born and bred. By their side stands a Truchman, with his neighbour, a Ghilan of Western Persia; while a Bucharian, garmented in a long coat reaching down nearly to his ankles, and girdled round the waist, is greeting with his usual thoughtless gaiety some Agriskhan acquaintance, sprung of the mixed blood of Hindoos and Tartars. Nogais are mingling with Kirghizians; and drapers from Paris are bargaining for the shawls of Cashmere with some member of an Asiatic tribe, whose name is as unpronounceable as it is long. Jews from Brody are squaring accounts with Turks from Trebizonde, and costume-painters from Berlin are walking arm in arm with actors, who are perhaps going to play in the evening some dark and savage scenes of tragedy or melodrama. In short, here you have, as the showman says, cotton-merchants from Manchester, jewellers from Augsburg, watchmakers from Neuchâtel, wine-merchants from Frankfort, leech-buyers from Hamburg, grocers from Königsburg, amber-dealers from Memel, pipe-makers from Dresden, and furriers from Warsaw—the whole helping to make up a crowd the most motley and singular ever assembled by the wonder-working genius of commerce. I say of commerce; for, be it remembered, that the crowd thus gathered together, as at a masquerade, has come to no holiday meeting. The ordinarily gaudy look of an English or French fair, which shows the shabbiness of its under-garments, even through the tinsel of outward decoration, is here entirely wanting. This is a

place of business; and the Nishnei buyers are no country bumpkins, who, with a few shillings in their pockets, come to gape and stare, and go back again as rich as Moses with his spectacles, but real *bona fide* merchants and bankers, who frequently invest their whole fortunes in the objects of distant commerce here put into sudden circulation.

As most of the Oriental dealers who frequent the fair belong to tribes in constant intercourse with the Russians of the south, there is not such a diversity of garb as might be expected from the variety of tongues prevalent in this modern Babel. The long kattan of Russia, as a compromise between the loose folds of the East and the scanty skirts of Europe, is worn by the majority. There are Russians, of course, from every corner of the empire; but the greater, and certainly the most singular part of the crowd consists of dealers from a variety of tribes in Central Asia, who come to Nishnei-Novgorod as the great point of union between Europe and Asia, where the East and the West make mutual interchange of their respective commodities.

Though there is no spot in the world, perhaps, where so many different members of the habitable globe congregate, yet the one interesting addition of *woman* is almost entirely wanting. What life and cameleon-like change of shade and colouring would this scene present, were each Asiatic to bring his dark-eyed, wondering bride along with him! But such a fancy is hopeless, since Oriental jealousy forbids the bare idea of such a journey among the infidel sons of the West.

Take it, however, as it is, the fair of Nishnei-Novgorod still offers such a *tout ensemble* as would require the highest descriptive powers to do it justice. The only thing to which it can be compared in Western Europe, is the great fair of Leipsic; yet how much does that of Nishnei surpass it! At first, perhaps, there is a feeling of disappointment; but let any one who has been at Nishnei think of it twelve months or twelve years after, and say whether it is not a sight that furnishes more to meditate on than any similar scene he has ever witnessed. Leipsic may have a livelier look, owing to the great intermixture of females in the crowd, and to the fact that all the beauty of a city where beauty is not rare comes to the aid of the trading populace. The German fair gains also from being held in the picturesque, old-fashioned streets of one of the most interesting cities in Europe, which boasts of houses as lofty as those of the Old Town of Edinburgh, and is surrounded on all sides by beautiful walks and scenes of histories and literary interest. Nishnei, on the contrary, is thrust away to a spot that nobody ever heard of before—a swampy point, threatened every day in the year by the floodings of two great rivers, with nothing round it but dreary forests and endless plains of water—so vast that the eye wearies of measuring them.

Yet, in spite of all this, the fair of Nishnei is a much more marvellous sight than that of Leipsic. In place of temporary booths, filled with German toys or Tyrolese guitars, are seen substantial, well-stored shops, groaning with articles at once the most costly and the most essential to human existence. Not forgetting that the most important part of the Leipsic business is transacted in the vast magazines with which the best streets are filled, it is yet asserted by competent judges, that, take the contents of every wareroom and every booth, the goods brought to Nishnei in *one* year would still be found far to surpass those brought to its rival in *two*. Leipsic collects rarely more than 40,000 strangers; while Nishnei, as we learn from good authority, is annually frequented during the two months of the fair by the enormous number of a quarter of a million. Some have even rated the number higher, especially Exelmann, who states it at 600,000; but this is justly rejected as exaggeration. Besides differing from the German fair in its want of the fair sex, Nishnei presents another feature of distinction in the total absence of anything literary from its stores; while the fair of Leipsic is essentially a literary one, or rather *the* literary one of Europe.

But, ere we quit the Russian city of shops we will just cast a cursory glance over its general features and proportions.

A sad difficulty presents itself at the very outset; for no sooner do we leave the dry bridge, and launch forth into the maze of alleys and streets, than we meet with a most decided obstacle, in the shape of what is incomparably the most abundant of all Russian commodities—*mud*. One might as well try to walk through a street of tar as through the creeping eddies which it here forms, and in which the furrows of the struggling wheels close almost immediately after they have passed. If it were not for this superabundance of dirt, the streets of Nishnei would be as good as any in Europe. They are as regular and as wide as those of the New Town of Edinburgh. Their number, as well as the magnitude of the business transacted in them, may be estimated from the fact that the rents drawn from them during the short term of the fair amount to 450,000 roubles.

To enumerate all the articles for sale here would be impossible. There is literally nothing but books wanting. From cathedral bells to ostrich feathers, every other commodity is supplied in abundance. To facilitate business, a separate quarter is allotted to each of the more important descriptions of goods. One of these quarters contains groceries, of which the value sold is very great; another contains fish and caviar exposed in most fragrant variety. No less than £60,000 worth of these are sold annually at the fair.

A third quarter is devoted to leather articles—all of them surprisingly cheap. And here Morocco leather particularly abounds, the greater part of which comes from Astrakhan. Soap, too, from the neighbouring province of Kasan, is brought hither in large quantities. Iron from Toula, a district south of Moscow, and glittering arms of every description occupy a conspicuous place in the streets.

The cloth-market is also very large and well-stocked; but the most curious of all is the tea-division, from the number of Chinese seen in it, and the great amount of business transacted by them. Cotton goods, wines, silks, shawls, fancy articles, furniture, mirrors, and crystals, are scattered about in the greatest profusion; and many a longing eye is turned towards the windows of the jewellers and silversmiths, who are said to do a large business, not only in selling home-made articles, but also in purchasing jewels and precious stones from Asia.

But we must now pass by the shops and their attractive contents; for an interesting sight of another kind demands our attention. Forming a species of outpost to the fair, there is a colony of carpenters and blacksmiths, whose business it is to doctor up broken-down carts and to shoe horses. Their mode of performing the latter operation is more cruel even than that practised in Germany. Outside the farrier's door, strong posts are fixed, with huge straps and pulleys attached to them. The poor horse is wheedled into this treacherous cradle, and, before he knows what is about to befal him, the straps and ropes are crossed under him, a wheel is turned, and in a moment he hangs in the air as helpless as a bale of wool. Other straps are now fastened about his flanks, so that he cannot move a limb; and his assailants, seizing hold of his foot, proceed to shoe him with as little ceremony as if he had neither heels to kick nor teeth to bite with.

For "The Friend."

The Simplicity of the Truth.

Our worthy forefathers in the Truth, were mo fully delivered from the desire after wordly gr ness, and outward display of earthly riches wisdom; and were led, through submission to baptisms of the Holy Spirit, to prefer the repro of Christ to all the treasures of Egypt—to su affliction with the people of God, rather than enjoy the pleasures of sin for a season. And t were made willing to sacrifice outward possess and enjoyment and even outward liberty and l rather than compromise their testimony even matters of seemingly small moment, to the sacri of their peace, and the reproach of their profess

But how is it with us in this day of outward ea and of despising small things? Are we engaged trimming our lamps, that they may be kept burni and our light so shine before men, that oth seeing our self-denial and simple obedience to teachings and leadings of the Holy Spirit, may led to glorify our Father who is in heaven? those amongst us, who are in possession of t abundance of wealth, concerned to follow the ample of Him, who, though all power in heav and earth was his, denied himself of all outwa appearance of greatness, and veiled his majes under the form of a servant?

It seems needful that we should examine o selves, and seriously ponder our ways, in order t we may discover what it is that is separating from that blessed union and communion of spi which was so eminently enjoyed by those faith cross-bearing disciples of the meek and low Jesus, who condescended to bear the reproach his enemies for their sakes, that he might rede them from the love of the world, teach them lesson of humility and self-denial, and exalt t name and power of the everlasting and unchang able Truth, above all earthly greatness, wisdom a power.

We have worthy examples of consistent plai ness and simplicity amongst us; but how small their number, and how little of the sympathy religiously exercised minds are they permitted enjoy, considering the number of those who a professing with them to be united in the one hea as members of one body! It seems almost va to write or preach against those glaring incons tencies in outward appearance, which are starin us in the face, while so many of those who a standing in the foremost ranks, as respects outwa position in society, are indulging themselves departures from that simplicity of life and plainne of outward appearance, into which the Truth inv riably leads, as its pointings are faithfully observe and followed.

There are things, which are perhaps allowab in themselves, from which we are bound to abstai if, by our indulgence therein, a brother may b caused to offend. We are accountable for ou example, which speaks louder than precept. Th rich are bound to example the poor, the learne the ignorant, and the gifted in any way the dest tute, by a humble and self-denying walk befo them, lest by inducing them to aspire above thei place, they make shipwreck of faith and a goo conscience. If we subscribe to the truth of th doctrine that we are not our own, but mere steward of what we possess, and accountable for the use every talent committed to our care, we must adm the strength of the obligation we *are* under, to d and to suffer, for the sake of the brethren, for th sake of the Truth, and for the sake of our ow souls, which have been bought at so dear a price

Our blessed Redeemer, while upon the earth lived as one having nothing, though possessed of a

's; and he said, "Foxes have holes, and the
of the air have nests, but the son of man hath
where to lay his head." When he rode into
salem, he was not borne upon a chariot with
rs, but upon one of the meanest of beasts, even
gh he had the power to have appeared in all
splendour of a worldly prince—he sought not
honour which cometh from men, but that which
ith from God alone, that he might be glorified
rgh his humility. And the holy apostles, of
m the world was not worthy, were counted the
ffuse of all things, because of the meanness
eir appearence, their outward destitution, and
ble obedience to the teachings of Christ, their
our and leader.

e may readily believe that it is the love of
ard things that has separated us from the love
Truth; a departure from its simple teachings
has led us into contention, strife and confusion;
the need of reformation was never more
parent to many who are yet left to mourn
r our degeneracy as a people, than at the pre-
t time; though there are others who seem to be
ll to our condition, because of their own unwil-
ness to forsake the forbidden paths of fleshly
dgence. It will be well for these, if they are
sed from their feeling of carnal security and
spiritual slumber, before the things which
ng to their peace are entirely and forever hid
m their eyes.

n the great and approaching day, when inquisi-
shall be made for blood, vain will be all our
uses for having esteemed and treated the blood
the covenant, which God hath made with his
ple, as an unholy thing, for having crucified the
ssed Son of God afresh, and put him to open
me, by rebelling against the law of his spirit
tten in the heart, which teaches, that denying
ungodliness, and the world's lusts, we should
soberly, righteously, and godly in the present
rld, looking and pressing toward the end of our
h, which is our victory over the world, the flesh,
the devil, even the salvation of our souls, by
us Christ, the auther and finisher of our faith.

Honesty and Trust.—The following pleasant
cdote is from "Glances and Glimpses," a new
ok by Harriet K. Hunt, who was once a teacher
Boston:—

A cousin of mine in Charleston, having passed
hy, it became proper that I should attend her
eral. It was school afternoon; I did not dis-
ss the scholars, and as they disliked a monitor,
it upon the following plan of leaving them:—
I placed in the chair the large old fashioned
te, (it had been my father's,) wrote on it the
nes of the scholars in the order in which they
; and arranged the needlework and reading—
I always had some interesting work to read
ud by some elder pupil every afternoon—and
n said, "Now, children, when the clock strikes
e, leave your seats orderly, go to my chair, and
ce on the slate by each of your names a *unit*
good behaviour, and a cross for bad. When I
urn I shall anxiously look at the slate, and in
e morning, when you are assembled, I will read
o list, but I *trust* in you!"
On my return I visited the school-room, and
und but one cross on the slate; and that where
least expected it, appended to the name of a
autiful, open, bright, brave child, who then pro-
ised much for the world—the fact of having rich
rents being her greatest drawback. She was the
st child in the school I should have thought ca-
ble of any misconduct. Well, the next morning
me: the list was read, it proved truthful; but
when I came to this name, I said, "My dear child,
you must explain; why is this?—what did you
do?" Looking up to me and speaking with a soul-
ful tone, which ever made her an object of interest,
she replied, "I laughed aloud, I laughed more than
once; I couldn't help it, because a slate was keep-
ing school!"

Epistle of George Fox.

Dear Friends,—Keep your meetings in the power
of the Lord, which is over all that is in the fall,
and must have an end. Therefore be wise in the
wisdom of God, which is from above, by which all
things were made and created; that that may be justi-
fied among you, and you all kept in the solid life,
which was before death was; and in the light,
which was before the darkness was with all its
works. In which light and life ye all may feel,
and have the heavenly unity and peace, possessing
the gospel fellowship, that is everlasting; which
was before that which doth not last forever; and
will remain when that is gone. For the gospel
being the power of God, is pure and everlasting.
Know it to be your portion; in which is stability,
and life, and immortality, shining over that which
darkens the mortal. So be faithful, every one to
God, in your measures of his power and life, that
ye may answer God's love and mercy to you, as
obedient children of the Most High; dwelling in
love, unity, and peace, and in innocency of heart
towards one another; that God may be glorified in
you, and you kept faithful witnesses for him, and
valiant for the truth on earth. God Almighty pre-
serve you all to his glory, that ye may feel his
blessing among you, and be possessors thereof.

1656. G. F.

For "The Friend."

William Dewsbury.

(Continued from page 324.)

Though George Fox has always been acknow-
ledged as the first and chief instrument in the Di-
vine hand in the gathering of the society of Friends,
in the setting up of meetings for discipline, and in
instituting the present order among us, yet when
William Dewsbury wrote the epistle on the support
of order and government in the Society, which ap-
pears to have been the first suggestions on that subject;
George Fox showed his freedom from all jealousy,
by placing his name to it, *after* that of the writer.
This is one, among the many proofs history fur-
nishes, that he was no seeker after superiority and
self-exaltation among his brethren. His great
object was the spread of the Redeemer's kingdom,
the discharge of his own duty under his direction,
and the encouragement of his brethren in the fulfil-
ment of theirs. William Penn says of him, "He
exercised no authority but over evil, and that every
where, and in all; but with *love, compassion*, and
long suffering, a most merciful man, as ready to
forgive, as unapt to take or give an offence." "And
truly I must say, that though God had visibly
clothed him with a divine preference and authority,
and indeed his very presence expressed a religious
majesty, yet he never abused it, but held his place
in the church of God with great meekness, and a
most engaging humility and moderation. For *upon
all occasions*, like his blessed Master, *he was a ser-
vant to all*, holding and exercising his eldership in
the invisible power that had gathered them, with
reverence to the Head, and care over the body, and
was received only in that spirit and power of Christ,
as the first and chief elder in this age; who, as he
was therefore worthy of double honour, so for the
same reason it was given by the faithful of this day,
because his authority was inward and not outward,
and that he got it and kept it *by the love of God*,
and *power of an endless life*."

In the epistle to which allusion has been made,
William Dewsbury says, "This is the word of the
living God to his church that he hath called and
chosen out of the world, to place his name in, to
order and guide in his pure wisdom to his praise
and glory, who alone is worthy, God over all,
blessed forever—That in every particular meeting
of Friends, there be chosen from among you, one
or two who are most grown in the power and life,
and in discernment in the Truth, to take the care
and charge over the flock of God in that place."
These were no doubt designed to perform the duties
of overseers, as they are now appointed, both to
encourage the right minded, and to treat with those
who were disorderly. "And this is the word of
the living God to you who are chosen—watch over
the flock of God, you to whom is committed the
charge and care; and take the oversight thereof,
not by constraint but willingly; not for filthy lucre
but of a ready mind. I charge and command you
in the presence of the living God, not to rule as
lords over God's heritage, but in the power of the
spirit in all parity. Be *examples to the flock*, and
see that order be kept in the church, in constantly
meeting together, according to the rule that hath
been given forth, that is to say, once in a week, or
more if it may be, besides the first day meeting.
And you are to have a general meeting with other
Friends near you, once in two or three weeks, as
the Lord orders and makes way. Be not slack and
backward, but faithful to the Lord, in improving
every opportunity for Friends to meet; and in every
town where Friends are scattered, lay the charge
and care on some Friends who are most grown in
the Truth, to see that they meet together to wait on
the Lord three or four hours, as the Lord orders it,
one night or two in the week. Watch over one
another with a pure single eye, to see that those
who come among them, walk orderly according to
what they profess. If any walk disorderly, let
those to whom the charge is committed, or any
other who discovers them, and is moved to speak
to them, deal plainly with them in reproving them,
ministering to that which is pure in the conscience,
for the restoring of them. But if they will not re-
form, acquaint two or three more *who are most
grown in the Truth*, or you to whom the care to
the flock is committed, with the other that did ad-
monish them, and *in tender love* admonish them
again; and with plainness of speech, minister of
that which is pure in their consciences, *to raise up
the witness*, and to judge and cut down the deceit,
that their souls may be saved, and their nakedness
covered. But if they still walk in disorder when
the church is met together, reprove them openly,
and if they still do not reform, but walk in their
filthiness, when the church is met together, in the
name of the Lord Jesus Christ, charge them to de-
part from among you. So cast them out, and have
no union with them, not so much as to eat with
them, until they repent and turn to the Lord, and
walk in obedience to that which is pure. If they
do this, then receive them again; but if they still
walk on in the stubbornness of their wills, and not
bend to that which is pure in their consciences,
keep them forth, that no filthy person dwell in the
house of God. Then will the blessing of the Lord
God be with you.

"See that there be not any in outward want in the
church, and that all walk orderly in their places
and callings. And if any root of bitterness spring
up in any, which causeth strife in their minds one
against another, as soon as you know of it, call such
before you and examine the matter strictly; and
stand in the wisdom and power of God to guide

you to judge the cause, and end it in righteousness." "Then will deceit be judged, and strife kept out, and the innocent set free to serve the Lord; and your union will be in Christ Jesus, where you will bring forth fruit abiding in Him; and through his blood you shall overcome the world in you and without, and shall reign as kings upon the earth."

William Dewsbury was concerned that those appointed to the oversight of the flock should be good examples, and should rule in the wisdom of God, not as lords over his heritage. From his directions, they were zealous and diligent in holding religious meetings, both day and night. They were not afraid of devoting themselves or their time, to the worship of the Lord, and to draw souls unto him. It was their meat and drink to be in the Lord's work in spreading his kingdom. He saw there could be no growth in the Truth in those who cultivated a bitter, contentious spirit. Those only whose union was in Christ Jesus, could bring forth the fruits of his Spirit, and through his blood, overcome the world and reign as kings by Him.

In the year 1654, he was committed to York Castle under the name of a seducer. After the warrant was issued to take him, he had gone to Tholthorp, where the constable, more like a ruffian than a peace officer, rushed into a meeting there, with a manifest intention of injuring him with an iron fork, but says he, "the Lord by his power chained him, and prevented his bloody intents." Whether the fellow was overawed by the calm, solemn, and dignified deportment of the Friends, or whether from some other cause, he was prevented from carrying the warrant into execution. Another warrant was procured from Thomas Dickinson of Kirby Hall, which was served upon him at Crake about twenty-five miles from York. The officer, willing to save himself trouble, proposed his remaining with his friends that night, on condition of their being bound for his appearance next day. But Dewsbury told them, that no man should be engaged for him; and turning to the constable said, "If thou hast power over the body, do with it what thou hast power to do." The constable then bade them stay at the house of his friend as the evening was advancing, whereupon William Dewsbury, assured the officer of his readiness to go with him on the following morning, if the Lord pleased. This respite afforded him and his friends the opportunity of sitting down together to wait upon God; but late in the night while thus engaged, they were surprised by the inhabitants, with the high constable at their head, who surrounded the house, attacking the doors and windows with great fury, and when they got this innocent servant of the Lord into their hands, they urged him along the street from one ale-house to another, until they found one into which entrance could be obtained, and in the morning he was taken before Dickinson, who being unable to prove any thing against him, committed him to York Castle. Here he was detained about four months, but though he claimed of Judge Hyndham at the assize, that he should have a fair trial, with his accusers face to face, which the judge promised, yet he was set at liberty by proclamation, after this detention on an unfounded malicious charge, without any proof, or the opportunity of defending himself, that the priest might escape the disgrace of making false allegations against a sound Christian, and being the means of depriving him of his liberty.

(To be continued.)

Salt.

Although salt forms part of the daily food of nearly the whole of the human race, yet few have any idea of its composition. Salt is a compound of two substances, a metal and gaseous body. The metal is called sodium, and the gas chlorine; and as chemists always endeavour to use such terms as they think will convey a clear idea of the things they describe, salt in chemical language is termed "chloride of sodium." The ocean which flows to every part of the earth affords its inhabitants an inexhaustible supply of salt; and lest it might be thought that nature had not in this respect been sufficiently bountiful, she supplies salt from the "bowels of the earth." We have salt mines yielding "rock salt," and salt springs, which, in many instances, are far away from the ocean, such as those at Syracuse, N. Y., in America. The salt mines in Catalonia, in Hungary, and Poland, are of an enormous extent. A salt mine at Wilisca, near Cracow, in Poland, has been worked for more than six hundred years. Within it is found a kind of subteraneous republic, which has its polity, laws, families, &c. When a traveller has arrived at the bottom of this strange abyss he is surprised at the long series of lofty vaults sustained with huge pillars of rock salt, and which appear by the light of the flambeaux to be so many crystals of precious stones. The most remarkable property of salt is its solubility in water; hence it is supposed that the sea washing over beds or strata of salt has in consequence become saline, as we now find it. The use of salt with food is obvious from an analysis of the blood and the gastric juice. With the addition of water, and under certain influences, salt changes its composition. Water being composed of hydrogen and oxygen, the change in salt, which takes place by means of the vital force, produces soda for the blood and hydrochloric acid for the stomach. As soda, is invariably found in the blood, and hydrochloric acid in the stomach, and as the blood and the stomach play their part correctly enough in our daily life, we can come to no other conclusion than that salt, which supplies these materials, is absolutely necessary to our well-being. Salt is not only useful to man in its primitive condition, but as it affords soda, its value is manifestly increased. The manufacture of soda from salt in England is one of the most important of our arts; for without soda no hard soaps could be produced; and for a thousand other things are we a debtor to Salt & Co. Besides the soda there is the chlorine. The great supremacy of the Manchester cotton mills in supplying the wide world with fabrics, is owing not only to the application of mechanics, to machinery, but also to the multifarious uses of chlorine derived from common salt.—*Scientific American.*

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 340.)

JOAN FORREST.

Joan Forrest, wife of William Forrest, was born in Warminster, in Wiltshire, Old England, Tenth mo. 10th, 1654. She was convinced of the Truth in her youth, as was also her husband. They suffered some persecution for conscience' sake, and William was imprisoned in 1683, for not attending at the Parish steeple-house, in Warminster, during the time it was open for public worship.

Soon after this they removed to America, and settled in Philadelphia. Joan was soon employed in the affairs of our religious Society, and manifested much dedication of heart, and honest zeal for the proper enforcement of the discipline. Few persons were so much employed by the women Friends of Philadelphia Monthly and other meetings for discipline, in her day, as Joan Forrest. She was deepening in the Truth, and her fri believing that she had received a gift for elde she was appointed to that station. She lived, ful and beloved, and was, we are told, "an ho sincere-hearted Friend, in good esteem amon concerned for the maintenance of our discipli of exemplary life and conversation,"—and Fourth mo. 30th, 1732, in the 78th year of age.

[Her husband, William Forrest, had dece before her, leaving a portion of his property, her decease, to Philadelphia Monthly Meeting the support of schools. This property, at the ner of Fourth and Chesnut streets, has been pl sential service in enabling the select school Philadelphia to furnish a liberal education small price.]

THOMAS SPEAKMAN.

Thomas Speakman, of Berkshire, Old Engl was born the latter part of 1692 or early in 1 He appears to have had his education amon Friends, but through the frailties of the flesh followed after youthful vanities, whereby he present distress and uneasiness to his best frie and prepared the way for sorrow of heart to h self in after life. Being often admonished for good, he endeavoured to remove the secret con tions of his own heart by contending against Truth.

When about twenty years of age, he removed Pennsylvania, bringing a certificate of members and marrying amongst Friends soon after, he tled at Kennett, Chester county. In 1727 he moved to Londongrove township, where he resi the remainder of his life. He was now brought see the sinfulness of his conduct, and under powerful convictions of the Holy Spirit, was led abhor himself in dust and ashes. After a sea of bitterness and anguish of soul, his self-will broken, and in true humility and lowliness of m he lay as a prostrate suppliant, looking to the L Jesus Christ for his only hope of salvation. grace was working in his soul, his clear sight Friends, beholding its fruit, in his humble, con tent demeanor, were enabled to rejoice over h The work of sanctification through the baptisms fire and of the Holy Ghost, proceeded steadily ward until, through the Lord's mercy, his wh character seemed changed. Soon a concern ca on him for the good of others, and a gift in t ministry was conferred upon him. His friends of his ministry, "Continuing faithful, he grew the same, and had a living, satisfactory testimo to bear."

He was faithful and dedicated, but his Mas did not appoint him long continued service. was taken ill, and deceased after a short illness, the 15th of the Fifth month, 1732, being in t 40th year of his age. He died "in peace w God, and in unity with faithful Friends."

PAUL PRESTON.

Paul Preston, son of William Preston, one of t early settlers at Frankford, Philadelphia coun was one of the valuable Friends in his day. In t Second month, 1713, he married Elizabeth, wid of Joshua Gilbert, soon after which he became u ful in religious society. His residence was now Philadelphia, where he exercised the rights of h pitality, kind to all classes, and especially ministeri to the necessities of the saints. Being appoint an elder, he was fervent in spirit in fulfilling t duties devolving on him, and his services in re gious meetings were many.

He was, we are informed, "careful in the atte dance of religious meetings, and in the education

ildren." His last illness was of several
t duration, but the Lord Jesus, whom he had
oured to serve whilst in health, preserved
resignation and peace to the end. Thomas
lly, who considered Paul Preston's house as
Philadelphia home, and speaks of him as his
friend, and kind landlord," tells us that on
ing bed, he said "he had no desire to live
do good, and that it had been his care to
conscience void of offence towards God, and
llen, which now was his comfort."
ived in good esteem with his friends and
ours—valued for his religious services, be-
lor his kindness and hospitality; and when
eased, Ninth month 7th, 1732, his loss was
ll felt.

ANN PARSON.

r Parson was the daughter of John Chapman,
1684, removed from England with his wife
veral young children, of whom Ann was one,
nsylvania. John Chapman purchased land
ghtstown, Bucks county, and settled there.
ext year, having two sons born to him, he
the name of the settlement Twins-borough.
se two children, Abraham and Joseph, we
ave occasion to speak hereafter. Ann, the
e of this memoir, was born in England, in

ghtstown was, in 1685, and for some time
ne of the settlements the farthest in the wil-
s, and most distant from the bulk of the
h inhabitants. The Indians, however, who
umerous, were very kind to John Chapman
mily, and although they came to his house
t companies, and were often supplied by him
od, yet they furnished his family from their
ores in time of need. On one occasion, when
Chapman's family were suffering for want of
ons, his eldest daughter, Mara, through the
ence of the Almighty Father, secured them
onable supply. She was riding by the Ne-
ng creek, when hearing a noise as of some ani-
distress, she stopped to examine what it was.
oking into the creek, she saw a large buck
the bank, who having just escaped from the
of a wolf, had taken refuge in the water. The
girl, with great presence of mind, alighted
ner horse, took off the bridle, and with a stick
d it over the horns of the wounded and terri-
imal, and secured him until assistance came.
olf, who did not seem willing to resign his
o the young girl, on the approach of others

Meeting one of their Indian neighbours in
oods, he advised them to go home fearing
hey would be lost. They were assured, per-
that they knew the way, and did not at once
his advice; the consequence was that they did
ach home until after night. They found the
n there. He was so concerned about them
he came to see, doubtless with an intent of
ring aid in searching for them if they were
The same kind feelings actuated the In-
when, about that time, the parents went to
ly Meeting, leaving their large family of young
ren at home. Every day, during the parents
nce, these watchful guardians of the interests
eir friends, came to see whether things were
oing on rightly amongst them.
s Ann Chapman grew in years, the visitations
e Lord's Holy Spirit often tendered her spirit,
as she submitted thereto, the work of grace
ressed to the sanctification of her soul. About
year 1699, she came forth in the ministry, in
which she had an excellent gift, and was abun-
dantly exercised therein at home and abroad.

In the year 1705 she visited the meetings in New England, in company with Ann Sibthorp, to the satisfaction of Friends there. In 1709, with full unity of her friends, she visited Friends and others in "England, Ireland, Scotland, and Wales." In this visit she had, at least at times, the company of Elizabeth Webb. She accomplished this service in humility and fear, and on her return, in the early part of 1712, presented many returning certificates and minutes of the unity of those visited, to the general meeting of ministers in the Fourth month. In the early part of 1713, she again visited New England; and in 1714 the meetings of Maryland, having in the last visit Sarah Miller as companion. Returning minutes in all these visits, speak of the unity of Friends with her service and that of her companion.

Soon after this she married ——— Parson. After her marriage we find her, in 1719, visiting Friends to the south, with Rose Tibbits; and to the time of her last illness diligently attending meetings at home and other parts of the province of Pennsylvania.

Selected for "The Friend."

The Cotton Trade of the World.

The Secretary of State has presented to Congress some comprehensive and valuable tables, exhibiting the amount of the cotton trade of the world for the last five years, with the various tariff dutics and custom-house regulations. These statistics show the important part the United States perform in this trade. This country has exported an average of more than a thousand million of pounds of cotton in each of the five years past, of which quantity more than seven hundred millions pounds went to England and nearly two hundred million pounds to France, from which this latter Government derived an annual revenue of nearly three millions of dollars. The amount of cotton exported in 1855 was—to Great Britain, 673,498,259 lbs., free of duty; to France, 210,113,809 lbs., duty of $3 72 per 220 lbs. in national vessels, and $6 48 in foreign vessels, duty paid $2,939,300; to Spain, 33,071,795, duty 79½ cts. per 102 lbs. in national vessels, and $1 85 in foreign vessels, paid $265,296; to Russia, 448,896, 18¾c. duty for 36 lbs., paid $47,018; to Hanse Towns, 30,809,991, duty paid, $25,795; to Belgium, 12,219,553, free; to Austria, 9,761,465, free; to Sardinia and Italy, 16,087,064, different rates; to Mexico, 7,527,079, duty $1 50 on 101 lbs., paid $103,118; to Holland, 4,941,414, free; to Sweden and Norway, 8,428,437, different rates; to British North American Provinces, 883,204, free; to Denmark, 209,186, free; to Cuba, 9,620, duty paid $2,355; to Portugal, 144,006, duty paid, 19 cents; elsewhere, 270,822. Total amount exported in 1855, 1,003,424,601 pounds which, at an average price of eight cents per pound, would produce the sum of $80,273,968 08.

The annual average importation of cotton from all countries into England, the last five years, has been 838,335,984 pounds, of which amount, according to British authorities, 661,529,220 pounds, or more than three-fourths, were from the United States, 715,525,296, pounds is the annual consumption in Great Britian, the rest is exported to the continent. About six-sevenths of the cotton received at Liverpool comes from the United States; four-fifths are estimated to be imported for the factories of Lancashire and Yorkshire. The number of spindles in operation in England is estimated at more than twenty millions. The value of cotton supplied by the United States to Great Britain, in 1855, was $57,616,749, being about the average each year the last four. About one-tenth of the cotton imported from the United States is re-exported from England, while nearly one-half of that imported from British India is never used in her factories, but is sent away. These facts are significant of their relative value. American cotton is estimated at one hundred per cent. superior to that of India. Cotton constitutes in value more than two-thirds of the domestic exports of the United States to France. Next to the United States, France derives her supplies of cotton from the Levant, and the third place is held by South America.

There are at present in Russia, or there were previous to the war, 495 cotton factories, employing 112,427 operatives, and producing annually 40,907,736 pounds of yarns and corresponding amounts of textiles.

Before the breaking out of the late war, the manufacture of cotton in the Russian empire was progressing with extraordinary activity. The number of spindles exceeded 350,000, producing annually upwards of 10,800,000 pounds of cotton yarns. The barter trade with the Chinese at Kiachta stimulates this branch of manufactures in Russia, as the article of cotton velvet constitutes the leading staple of exchange at that point for the teas and other merchandize of China. In former years this article was supplied almost exclusively by Great Britain, but the Chinese prefer the Russian manufacture, and hence the steady progress of that branch of industry. Thus the annually increasing importation of the raw material and constant diminution in the quantity of cotton yarns imported is accounted for. Were raw cotton admitted, as in England, free of duty, the United States would most probably supply, in the direct trade, the whole quantity consumed in that Empire. As it is, the commercial reforms in Russia, already announced officially and now in progress, comprehending, as they do, the establishment of American houses at St. Petersburg, must necessarily tend to that result.—*Ledger.*

For "The Friend."

The Wrongs of Teachers.

[The writer who furnishes the following, accompanied it with a note stating that it was written without the cognizance of any teacher. Eds. of Friend.]

Among the wrongs abounding in the world, claiming the attention of all true friends of the emancipation of society from existing evils, whether they be the wrongs of individuals, of classes, or of races, engaging the pen of the moralist and the philanthropist, the wrongs of teachers have obtained but little consideration; and yet if we will but examine into the subject, if we will but revert to circumstances known in our own experience, we may discover that the wrongs of teachers exist not merely in name, but have a substantial reality, so that their removal or amelioration are worthy of the efforts of all classes.

It is necessary for faithful teachers to maintain a constant watch over their charge, promptly to meet all outgoings of the careless, to check the propensities of the erring, and to inflict punishment on the disobedient; but when the restless child, dissatisfied with the curbing influence exerted over him, pours out his complaints into the too-willing ear of the parent, how often is it the case, that the parent, instead of upholding the teacher in his beneficent efforts, instead of endeavouring to convince the child of the necessity of conducting at all times with propriety and complying with the regulations of the school, will palliate the faults or favour the views of

the pupil; saying perhaps, that the teacher ought not to be *too* strict; and thus foster a spirit of rebellion which may eventually prove disastrous to the pupil himself and injurious to his associates; when if it was but known, that except for actual cases of injustice, no ear would be opened for hearing complaints, much uncomfortable feeling might be spared the child, and the evil effect of connivance or indulgence be avoided; so that in justice to the teacher, for the benefit of the child, and consequently for their own peace, it behoves parents to watch over their own spirits in this thing, that they may not contribute to the injury of their offspring nor in any wise mar that harmony so desirable in a well regulated school.

It will sometimes occur even in schools carefully guarded, that among the scholars there are those, who, receiving but little moral restraint at home, prove by their actions their unfitness for associating with children whose training has been different in its character. These, though deserving disgrace and perhaps dismissal, are through the clemency of the teacher but moderately punished, and with a hope of reformation, they are continued in the school, where they too often poison the principles of their school-fellows, who though more virtuous, are still too yielding to resist as they ought that influence which wickedness so often seems to obtain; and how frequent it is that these bad spirits conceive an enmity, an absolute hatred of their teacher (who is bound to discourage, restrain, and punish them in all their acts of error,) which they endeavour to impart to all in the school, and oftimes with such success that general ill feelings towards particular teachers often obtain. Those who are conversant with schools can mournfully attest this.

Now when such a sad state does befal a school, when a general feeling of dislike pervades the minds of the scholars, how often does it occur that their parents, instead of promptly checking it by strongly expressed disapprobation, and by forbidding anything tending to increase or spread it, receive the tales of their children in silence, and inwardly conclude that where there is no attachment there can be little learned, and the school may as well be abandoned; whereas if the parents and teacher mutually fulfilled their duty, an attachment between the pupils and the latter would eventually be formed, which would increase instead of lessen; but as is too commonly the case, the teacher is wronged, the child is injured, and the parent made uncomfortable; and this is sometimes the state, even when the teacher's faculty for imparting instruction is acknowledged by all, and where his integrity is unquestioned.

What an easy thing it is for children to persuade themselves that they are aggrieved, and how almost unconsciously will they give a deceptive colouring in the recital of their troubles, which may fall plausibly upon ears quickened by parental partiality, unless restrained by a discerning spirit of justice, and thus the wrongs of the teacher may be heightened through the credulity of the parents.

How easy it is for parents to slide into a belief that their children, although not perfect, are yet better than many others, while did they but know the extent of their wanderings in the path of error, their hearts would sink with amazement; and be it noted that there would be many evidences of this at school, while there might be none at home.

A young man of ordinary talents, possessed of some capital, whether by legacy or otherwise, who enters the avenues of trade and is enabled by constant application or sometimes by speculation, to increase his store from time to time until at length he amasses a fortune, will often be commended by the world for his attention and his shrewdness, when perhaps all he can boast of as the result of his life's labour, is the amount of this world's goods which he has succeeded in accumulating; while the young man of superior ability who, with no capital except the gifts of his Maker, the fruits of his study, and the integrity of his heart, entering on the noble vocation of a teacher, devotes himself to leading the youth in the ways of knowledge, to expanding their minds in the truths of science, and above all to training their steps in the paths of virtue; who through the wearing trials of his vocation, amid all the discouragements with which he is surrounded, still presses firmly on, endeavouring faithfully to fulfil his mission, and who in the end is able to reflect that he has exerted an influence more extensive in its range and higher in its consequences than any ordinary business could effect, is silently disregarded by the world and soon forgotten by those who would wish to be numbered with the virtuous.

Leaving however all specific causes, and examining the subject upon the broad foundation of the relations subsisting between teachers and pupils, and parents and the community, and guided therein simply by what we have known in the experience of bygone days, we certainly may conclude that among the wrongs of classes, those of teachers may be numbered, and that they are worthy the efforts of christian influences for their amelioration. M. O. T.

THE FRIEND.

SEVENTH MONTH 12, 1856.

DUBLIN YEARLY MEETING.

"The meeting of ministers and elders took place on Seventh-day, the 26th of Fourth month, at eleven o'clock, the Conference of Elders having been previously held at ten. The number in attendance appeared similar to that of several years past; and the business of the meeting was conducted in usual course.

Certificates on behalf of Sarah Squire, John P. Milner, and Henry Hopkins, with minutes on behalf of Robert and Christine Alsop, and Eliza P. Gurney, were produced and read. The three first were on a general visit to Friends in Ireland; the others to attend the Yearly Meeting, and some few others.

Second-day morning.—The meeting assembled at the usual hour, rather small at first, but subsequently became considerably increased. Two ministering Friends were engaged briefly, but impressively, in religious communication, prior to the commencement of the business. All the representatives except four were present. Our Friend, Jacob Green, was among the absent, through indisposition.

The certificates and minutes on behalf of our English friends were read in course. Then came a *written* report from the Meeting of Ministers and Elders, an improvement, it was considered, on previous practice, which had been given verbally.

The London and Foreign epistles came next in order of reading, Ohio excepted, these documents giving rise to little remark. There was no epistle received from North Carolina; the others were referred as usual to a committee; and after transacting some routine business, the meeting adjourned to allow time for the representatives to meet and choose clerks. This body agreed to the continuance of last year's clerk, with Henry Russell and James N. Richardson as assistants. In the afternoon, the Yearly Meeting took up the question involved in the Ohio separation; the meeting last year having concluded to adopt the report of its committee, that no decision should, at that time, be come to, and to leave it for further consideration at the present.

After some interchange of sentiment, it wa cided to open in the meeting at large, the qu as to which of the two Yearly Meetings in Ohi should recognize. Accordingly there were the various official documents, received from behalf of both bodies, which occupied several h The meeting then settling down to the consi tion of the important subject thus brought befo after solid deliberation and much expressio sentiment, the judgment of the meeting wa corded in favour of the body in Ohio, represe by Jonathan Binns and Jane M. Plumme clerks.

This sitting occupied five-and-a-half hours, after such protracted deliberation, the meeting fairly exhausted. There was, however, much animity in this decision, but one Friend advoc further delay, and no voice being raised in fa of the other body. The Friends at the table wer trusted with the bringing in to another sittin suitable minute as a record of the judgment to by the meeting.

Third-day morning, Fourth month 29th.—after coming together, the Friends appointed duced the draft of minute ordered at the prev sitting, which was approved and adopted. A authenticated copy to be sent to the correspon of the body recognized; and a similar copy, gether with the epistle forwarded therefrom, sent to Benjamin Hoyle, the clerk of the o body.

The answers to the queries were then proce with, as far as the seventh inclusive. Deficie were reported as to the attendance of our relig meetings; also in relation to the important dut parental care in training of young persons— with reference to the maintenance of our testim relative to ecclesiastical demands, &c. Much wis counsel went forth on some of the subjects al alluded to, and the deficiencies reported as to testimony against a hireling ministry, took hold of the meeting, as to cause reference of subject to the Large Committee. This was a s sitting, and we trust it will be remembered by as an instructive opportunity.

Evening.—The remaining queries and answ were read, and the whole referred to three Frie to prepare answers therefrom to the first eleven London. The consideration now arose, in course, as to whether the state of the body, depicted in the answers brought up, claimed further care and attention of the meeting. particular concern being expressed, a minute made expressive of the exercise of the meeting view of our present condition as a Society; wi being read, was approved, and adopted. It cludes with a "desire that all among us may aroused to a serious consideration of our g responsibilities as professors of the Christian na and by increased devotedness of heart to the L be strengthened of Him to greater dedicatio His service, and to that measure of individ faithfulness by which our own growth in grace be advanced, and the cause of truth and rig ousness be promoted." The Accounts of Su ings sustained by Friends in the three provin were read, the amount being £494 10s. 9d.

Large Committee met at eight P. M., and s rated sub-committees for the London and For epistles. Some discussion arose as to sending epistle to Philadelphia, not knowing the pre state of that Yearly Meeting as to a division year; but it was believed best not to omit addr ing them at this time. Though no epistle was ceived from North Carolina, yet it was conclu to address their next Yearly Meeting as usual.

Fourth-day morning, Fourth month 30th

for worship, which was a large gathering; mber of Friends were engaged to minis- e assembly. Soon after the meeting dis- he Yearly Meeting's Committee (a stand- analogous in function to the Meeting for es in London) met by appointment of the Meeting, and was occupied about two hours dering some provisions of the Tithe Rent Act.

room.—Last year, a proposition was re- om the Quarterly Meeting of Leinster, to e our mode of answering the queries to England, viz., to answer the first eleven spring, and to this meeting; and the re- to the Autumn Quarterly Meeting, with swered there in usual course. The subject nt some discussion last year, and was re- r further consideration to this Yearly Meet- was now spoken to at much length, but ing not being prepared to adopt the pro- it was therefore set aside. After the ap- of a Committee to audit the treasurer's the meeting adjourned.

ven o'clock the Large Committee assembled, ng an open one, it was numerously attended. arly Meeting had referred the subject of ent Charge to this body for consideration. been stated in that meeting, that many holders, or rather occupiers of land, had the conclusion that Tithe Rent Charge be- a fixed tax on land, and not on industry, otofore, the objection to its payment was vay. This being inconsistent with the judg- f this Yearly Meeting in 1840, which de- at Tithe and Tithe Rent Charge are iden- he application, in both cases, being the same s believed right to give Friends another nity of stating their views on the subject. A cussion of this matter was accordingly en- n, and a free interchange of sentiment hav- en place, the judgment of the meeting was ly in entire harmony with the former con- s above referred to, a few only being of an e view. A verbal report to this effect was on to the Yearly Meeting, and the committ- parated at a late hour.

day morning, 1st of Fifth month.—At o'clock the Yearly Meeting assembled. Af- eral Friends had been engaged in ministry, ort of the Large Committee on the Tithe harge discussion was verbally given in; but her time was occupied with the subject. The ttee appointed to audit the treasurer's ac- gave in their report, and recommended £200 ssessed on the Quarterly Meetings, for the the Yearly Meeting, which was accordingly

t followed a minute of last Yearly Meeting ndon, submitted for adoption by our Yearly ng's Committee, recommending Monthly Meet- o bestow care and oversight towards young s, not members, educated at our public s. This opened a discussion of considerable and interest, respecting the class alluded to minute, as well as our own members in early A number of young persons took part in this sion, and it was generally conceded that more care and interest needed to be exercised ds the youth. The subject of the early reli- training of children was much dwelt upon, ome systematic and associated plan of religious ction of young persons spoken to by various duals, without anything, however, of a practi- ature being suggested. The deliberation on ubject was agreeably conducted, and mani- that the minds of many of our young people oughtful about their best interests. There is, however, in our judgment, too much of a looking outward for that instruction, which is more convincingly to be learned within. Outward means, doubtless, have their use, where judiciously administered; but there is much reason to believe, that an increased watchful attention to the teachings of the Spirit of Truth in the heart is that which is mainly wanting; and a fear impresses us, that this important part of Christian truth is not sufficiently and practically recognized by some who may even be measurably awakened to a sense of the unspeakable value of eternal things. Did this watchful care more prevail, it would manifest its good fruits in greater solidity and gravity of demeanor, in the daily walk amongst men, and greater willingness to yield to those restraints of the cross of Christ, which are ever opposed to a conformity to the world, in attire, deportment, and language—in harmony with the apostolic exhortation, not to be "conformed to this world; but be ye transformed by the renewing of your minds, that ye may prove what is the good, and acceptable, and perfect will of God."

The minute was adopted, and recommended to the attention of Monthly Meetings, soon after which, the Meeting adjourned.

Fifth-day evening.—The first matter for consideration was a proposition, received last year from Leinster Quarterly Meeting, for the sanction of the Yearly Meeting to the use of grave stones. In Ireland there has never been any rule of discipline, or minute of advice, on this subject, long established practice having discountenanced the use of stones indicating where our Friends were laid; but of later time—*and especially since Friends in England have adopted a different course*—a growing desire, on the part of many, has been manifested for the introduction of these memorials of the dead. There appeared a considerable diversity of sentiment on this subject, and its discussion occupied a large portion of the time of the meeting. Of young Friends, a large number, and some few of those more advanced, were in favour of adopting the proposition. The number who took an opposite view was much less. It was deemed best, therefore, to yield *to the wishes of the majority*, as, in the opinion of many, no principle of the Society was involved in the concession. A committee was accordingly appointed to draft a minute on the subject, to be submitted to a future sitting.

A minute of London Yearly Meeting, 1855, respecting the extending of care towards members of the Society resident in Australia, was submitted for adoption by the Yearly Meeting's Committee. The notification of such parties to the Meetings for Discipline established in that country, is the prominent feature of this minute; and after some time spent in deliberation on the comparative advantages and disadvantages of the course suggested, it was adopted, and directions issued to our Monthly Meetings to comply with its provisions, with reference both to such as have already emigrated, or may hereafter settle in that locality.

A minute of Carlow Monthly Meeting, concerning our late friend Elizabeth Barrington, of Ballitore, was now read, and being acceptable to the meeting, was signed by the clerk on its behalf.

Testimonies respecting our deceased friends William Forster and Rachel Priestman, were read.

A paragraph in the report of the Yearly Meeting's Committee, informing of its action regarding a bill lately introduced into Parliament, for the abolition of ministers' money in Ireland, now engaged the attention of the meeting. That body believed it to be a suitable time to petition for the abolition of this impost; a petition had accordingly been prepared, and forwarded to the chief secretary for Ireland; but the bill was lost on its second reading. A copy of said petition was presented and read in the Yearly Meeting, and the attention paid to this matter by the Committee was satisfactory to the meeting. Soon after this an adjournment took place.

Sixth-day morning.—Meeting for worship. A number of Friends were engaged in ministry and in prayer.

At the rise of the meeting, the Epistle Committee met and passed some of the Foreign epistles; also a circular paragraph for all of them, on the restoration of peace in Europe; and a paragraph to be appended to each, informing of the Yearly Meeting's decision on the Ohio question—omitting the latter in that to Ohio, in consequence of its being accompanied by the minute of the Yearly Meeting.

Sixth-day afternoon.—Read general epistle from London Yearly Meeting of last year. A proposition from the Quarterly Meeting of Leinster, for a change in the time of commencing our Yearly Meeting, was next read; to the effect, that the Yearly Meeting of Ministers and Elders should be on the Fourth-day preceding the Seventh-day on which it is now held; the Yearly Meeting to open with a meeting for worship next day at ten, and the first sitting of said meeting at four, same evening and to continue from day to day until concluded. The proposition underwent some discussion, and many seemed to favour the change, but it was referred for further consideration next year.

The subject of the punishment of death was introduced, and some time spent in deliberation upon it. The discussion was an interesting one, and it issued in the nomination of a committee to prepare a petition to both Houses of Parliament, for the abolition of this mode of punishment, and to be signed by the meeting at large. Adjourned till next morning.

The Large Committee met at eight o'clock, and was occupied in passing the London and Foreign epistles.

Seventh-day morning.—There was a quiet and comforting feeling over the meeting after assembling. A proposition made at a former sitting by the Committee of Management of the Agricultural School at Brookfield, for the Yearly Meeting to take that institution under its care, having been adopted, a minute was now made to that effect, and read and agreed to.

The annual reports of that school, and those of Ulster and Munster were read, but without eliciting any remark.

The petition for the abolition of death punishments, prepared by the committee appointed for that purpose, was read and agreed to and arrangements made for its being signed by Friends generally at the close of this sitting; the care of its presentation being left in the hands of the Yearly Meeting's Committee.

A concern, expressed at an early sitting of the Yearly Meeting, respecting the restoration of peace, and the thankful feeling which which was due from us, as being by our peaceable principles exempted from having any part in the late war, or suffering through bereavement of relatives or by their mutilations—a concern which did not, at the time of being introduced, make much way in the minds of Friends, was again brought forward, and so laid hold of the meeting as to issue in the naming of a committee to prepare a suitable minute for the adoption of the meeting. Those thus named retired, and some time after returned with an essay of a minute, which, with some alteration, was adopted and recorded.

The answers to the queries for London having been read and agreed to, a message from the women's meeting announced the concern of two of

their number to pay us a visit, which being united with, Sarah Squire and Eliza Malcomson were introduced by Samuel Bewley and John Pim. The female Friends were both engaged in ministry at considerable length, and the first named in supplication.

The representatives to London Yearly Meeting were then nominated, and a communication from the Women's Yearly Meeting was received, intimating that their meeting was drawing to a close, and that they could make the acknowledgment, that they had been favoured at seasons with the presence of heavenly good, and had conducted their business with much harmony. A record of similar import was made by our clerk; next ensued a time of impressive silence; several Friends were then engaged in ministerial service, soon after which the concluding minute was read, and after a brief pause the meeting separated."

SUMMARY OF EVENTS.

EUROPE.—Latest advices from England are of the Sixth mo. 25th. The news is generally unimportant. Peace meetings and addresses to America were frequent. The excitement consequent on the arrival of Crampton, speedily subsided, and judging from the newspapers in the interior, it would seem that the people generally are pleased with the turn affairs have taken. It is said that the public feeling on American difficulties has now subsided so much, as to have no longer any unsettling effect on the markets. The London Times advises Great Britain to hasten a settlement of the Central American question before the election of Buchanan to the Presidency, should that take place.

In France, Louis Napoleon is taking steps to have the Empress appointed Regent for her son. Two and a half millions of francs have been collected for the sufferers from inundation. Letters from Vienna state that Marshal Radetsky has sent word to his government from Lombardy, that if the excitement continued in Lombardy and the Venetian provinces, he should demand an increase of 30,000 troops. Mazzini's agents at Malta, say that everything is ripe at Naples for a great movement. Advices from Parma state that the Grand Duchess, while attempting to leave her dominions, was arrested by the Austrian military authorities, and obliged to return to her capital. On her remonstrating, she was told that as the government of Parma had called on the Austrian troops, it was necessary that the sovereign should remain to countenance their acts. The ship Sarah Bryant, from Cronstadt to New York, was the first American vessel that passed the Sound since the expiration of the treaty. She paid the duties under protest. It is stated, that owing to the mediation of Russia, an arrangement has been concluded between Denmark and the United States, in virtue of which a provisional toll convention will remain in force until Sixth month, 1857, and the Sound dues will be collected under this convention as formerly.

The Russian government is turning its attention to the colonization of its American territory. A large colonization party is being fitted out at Hamburg, by the Russian-American Company. It appears settled that very little grain will be exported from Russia this season. Hundreds of vessels that went to the Black Sea for cargoes will return empty. It is stated that the Russian Emperor's views are favourable to reform; business men now find it a far easier matter to obtain passports for foreign countries. The state of Poland since hopes of freedom were awakened during the war, has been one requiring nice discrimination and great tact; the conduct of Alexander has been much approved, as evincing judgment and ability, and his efforts towards pacification have apparently been followed by success.

Liverpool Markets.—Quotations in the cotton market are unchanged. The demand continues moderate. In bread stuffs the market is firm, but buyers are holding back for lower prices. Business in provisions was dull.

London Markets.—Money is easier. Consols for account closed at 94¾ a 94⅞.

Mexico.—Dates to the 25th ult. Congress has unanimously repealed Santa Anna's decree in favour of the Jesuits. The Spanish Convention question remains unsettled. Some of the papers say that it was in course of arrangement, and others declare that the Spanish minister is preparing to leave.

Nicaragua.—Great distress and dissatisfaction exists among the soldiers of General Walker's army, owing to the cholera and fever which prevail among them to a terrible extent. There is also a scarcity of provision. The country is under martial law, and every American and native has to obtain a pass, signed by Gen. Walker, before he can go beyond the boundaries of Nicaragua. Costa Rican advices to the 5th ult., state that a new expedition is organizing in that country against Walker, to be composed of 9,000 men. The feeling against the invaders, in the Central American states, is as strong as ever. The cholera had subsided in Costa Rica.

UNITED STATES.—*Congress.*—A majority and a minority report have been presented by the Kansas Special Committee. The whole document covers over three thousand pages of foolscap. The conclusions of the committee leave no doubt that great frauds were perpetrated in the elections; in fact almost every means of deceit and violence was adopted to secure the desired end of silencing or neutralizing, by outside influence, the voice of the voters from the free states. It is hoped that the guards thrown around the ballot box by the bill of Senator Douglas, adopted by the Senate on the 3rd inst., will effectually secure the elections against such frauds. The bill passed by the House, admitting Kansas under the Topeka Constitution, is not expected to pass the Senate. The 30th ult. was the day fixed for the trial of Preston Brooks, but a note having been received from Senator Sumner, stating that his physician did not think it prudent for him to attend the court at present, owing to the condition of his health; the witnesses were discharged until further notice. General Fersifer F. Smith has been appointed to command the military department of the west. Col. Sumner will remain in command of the troops in Kansas, but be subordinate to Gen. Smith. Affairs in Kansas continue unsettled, though the reports of outrage and murder are less frequent. A letter from Chicago states, that a Methodist Conference which had assembled at Rochester, Missouri, received orders from a number of pro-slavery men, to adjourn immediately and leave the State. Not complying with the order, a mob assembled, and tarred and feathered the presiding officer. An old man who attempted to prevent the outrage was shot. This account has since been rendered doubtful.

Philadelphia.—Mortality last week, 332. The 4th inst. passed with the usual amount of disorder. Several accidents from gunpowder, and numerous fires, occurred. The farmers in the neighbourhood of the city are busy harvesting. The wheat crop is said to be a very fair one.

New York.—Mortality last week, 393. The aggregate shipments of specie since the first of the year, amount to $16,245,918.87.

Miscellaneous.—Great distress for want of food, prevails at many of the outposts of Newfoundland. Large numbers of the people were in a state of actual starvation. Extensive provisions were made by the legislature, during its session, for the destitute class; but it is reported that the sufferers at the outposts have not received their fair share.

The Wheat Crop of Tennessee, it is thought, will prove at least an average one.

The Hay Crop is nearly all gathered in the neighbourhood of Reading, Berks county, Pa., and farmers are making preparations to cut their grain. The grass, throughout the county, is very short, and some was much injured after being cut, by heavy rains a fortnight ago. The quantity of hay taken in, scarcely amounts to an ordinary average crop. The wheat looks pretty well, and will yield a fair crop. Oats are backward and unpromising, and corn might look much better. The great scarcity of farm labourers has compelled farmers to resort to the machinery recently introduced. Before many years, they will doubtless entirely supersede manual labour in the harvest field.

Western Rivers.—On the evening of the 1st inst., at Pittsburg, Pa., there were four feet nine inches in the channel, and rising. At Cincinnati, Ohio, the river had risen about an inch, and was at a stand. The Red river raft has been so far removed that boats can now navigate the new channel. The United States snagboat Gopher, has passed and repassed through it already, without meeting any serious obstacle.

The Stockholders of the Ohio and Pennsylvania Railroad, on the 2nd instant, decided for consolidation with the Fort Wayne and Chicago road, which will give a continuous line of railroad from Philadelphia to Chicago, by next fall, as the work of completing the connection from Fort Wayne to Plymouth, is to be immediately proceeded with.

The Cashmere Goat has been introduced into Tennessee, where it is said to thrive. The wool has been engaged, this year, at New York, the purchasers designing to send it to Paisely, in Scotland, in order to be manufactured into shawls.

Schooner has been chartered to go from Chicago to Liverpool direct, by way of the lakes and the St. Lawrence river and canals. She will have about two thousand miles of navigation to go over before she gets to the Atlantic.

A Patent has been granted to certain parties in Maryland, for earthern-ware reflectors, which are said to possess some important properties. They are intended for marine and other lights, which are usually made of copper, silvered over. In this the copper is covered with platinum, and an earthern-ware glaze over the platinum, which a presents a highly polished surface, and at the same time resists the corrosive action of the air.

A true bill for murder, was found by the grand jury against Herbert, the member of Congress from California, who shot one of the servants at the National hotel some weeks ago. He was committed to jail to await his trial.

RECEIPTS.

Received, from David F. Knowles, Canada, per J. Hagt., New York, $2 25, vol. 29; from J. Forbes, per Taylor, Ohio, $2, to 40, vol. 30; from S. Hobson, Ohio, for John Marshall, $2, vol. 29.

THE ANNUAL ASSOCIATION OF WOMEN FRIENDS

For the Relief of Sick Children in the Summer season.

Take this method of informing parents of the most spectable of the poorer class, who may have sick suffering from the *Summer Complaint*, by a resident crowded, ill-ventilated courts and alleys, that the now prepared to receive applications, and will fu gratuitously, tickets for excursions, either by rail steamboat. In extreme cases, if preferred, board country will be procured for mothers with their s fants, free of expense.

Names and residence of Members of the Annual A tion of Women Friends for the relief of Sick Chil the Summer Season.

'e take the following from the "Pennsylvania
nal of Prison Discipline," the editor of which
he has reason to believe the narrative "is
tion."]

n one of the busiest streets of a busy city
sd an elderly lady, accompanied by a gentle-
who had lately completed his education. Be-
ngaged in conversation, neither of them seemed
ttend to anything besides, until the crowd
ing against them caused the gentleman to look
d, when he perceived some boys, of what he
d suspicious appearance, following their path.
I must watch my pockets,' he said; 'I had a
ing when last here of what I may expect in
city.'

What was it?' inquired the lady.

Probably what is only a common occurrence.
ndia handkerchief was picked from my pocket.

your handkerchief is stolen,' said a woman.
oked behind, and there was a young lad mak-
off with it at full speed; I followed, and if my
rs were not as light as his—my feet were.
n he saw that I was likely to win the race, he
pped his spoils, so I recovered my property;
the little rogue might have got off better than
leserved, had not a policeman witnessed the
saction, and provided him with lodging gratis;
not quite so, for he had to pay by hard labour
oard and lodging while he remained.'

And doubtless he came out of that lodging bet-
qualified and better disposed to pick your
ket than when he went in.'

That is no affair of mine, Mrs. Harman. My
ness is to punish a thief when I catch him.
the chaplain reform him, if he can.'

Aided by the society to which the poor culprit
be condemned during his imprisonment!' an-
red Mrs. Harman. 'Ah, my dear sir,' said
s. Harman, 'how different is the end man-pro-
es in the case of an offender against himself,
n that which our heavenly Father designs in
ling with far worse offenders! Man aims only
punish; God seeks to convert.'

But, you hardly expect me to stand preaching
the street to every little thief whose hand I may
d in my pocket.'

No, I do not. But as we are all interested in
e suppression of vice, I would have you and all
ers alive to the importance of making use of
e means by which these poor outcasts may be-
ne respectable members of society, and instead of handing them over on every occasion to the tender mercies of the law, endeavour to place them where their evil habits may be checked, and their intellect cultivated.'

'All perfectly utopian, Mrs. Harman, believe me. Show me a single instance in which any good fruit has ever been found on one of these crab-stocks, and then I may try to act as you desire the next time my pocket is picked.'

'You promise me that, do you?' said Mrs. Harman, looking up earnestly in his face.

'I may very safely,' he replied, laughing.

'Well, when we arrive at the cottage I will tell you a tale that I think will interest you.'

This cottage (Mrs. Harman's residence,) lay at the outskirts of the city, and was soon reached; and when she and her young friend were seated, she began as follows:—'You may have heard from your mother, that I was once in a situation different from that which I now occupy; that I was, in fact, what many would call wealthy. But with this portion of my history I am not going to trouble you, save only to mention that it was then the circumstance took place which forms the groundwork of my present story. I had driven out one day in an open carriage to make purchases in the city, and was returning home, when I had occasion to stop in a crowded thoroughfare, to speak to a person whom I employed. While doing so, I forgot that at the other side of the open carriage lay a basket containing some valuable articles, and out of which hung a cambric handkerchief. Having finished my business, I turned round just in time to see a boy, apparently about ten years of age, draw the handkerchief out; and he was on the point of making off with it when my servant caught him by the ragged collar of a miserable coat, and applying to him some not very complimentary epithets, was about handing him over to a policeman, when something in the boy's countenance struck me with compassion. He had not only the appearance of extreme want, but when detected in the theft hung his head with shame, a burning blush spreading over his wasted and pallid features. 'No, no, John,' I cried, 'do not give him up to the police. Let us try if we cannot do something better for him than that.'

'It was in vain that John declared the little vagabond deserved nothing but the gaol. I resolved to have my own way, and to make an experiment with this unfortunate child. I told him where I lived, promising him a good dinner and a coat if he would come to my house that evening. It would have amused you had you seen my servant's face when he heard me inviting a thief to my house, and promising him a reward for coming; predicting that I should soon have a visit from a gang of housebreakers, and that this 'little viper' would show them the way. I promised him to be cautious, and not to let the boy see any of the house until we had proved him. He came an hour after, and had I not been myself watching for him I should never have known of his arrival, for he hung about the back-door without courage to knock. Most unwillingly the cook sent him out a plentiful dinner, and I stood by while he ate it, or rather part of it, as he did not finish what he got: when I urged him to do so, he asked leave to take the rest home. As yet I had asked him no questions, but now inquired where was his home? Whether he had parents, or any family living? Where his home was he would not tell; but he had no father, no mother, no brother nor sister; and with much difficulty I gathered from his lips the following tale:—

'His father had been a labourer, and was killed by a fall from a scaffolding the preceding year. His mother went out to work, and earned a miserable pittance, which just preserved them from starvation. She had died about three months before I met him, (probably from want,) and he had not any one to look to for a meal but the owners of the lodging-house, one corner of a wretched garret of which he and his mother had occupied. These people would allow him to remain only on one condition, namely, that he would '*do something*' for his own support. What that something was you can easily guess, and he soon learned the necessity of attending to their requirements. Becoming a regular street pilferer, if he returned home in the evening empty-handed he was beaten and sent supperless to bed; and such had been his life from the time his mother died until I learned his melancholy story.

'I was encouraged in my desire to take some steps to rescue him from destruction, by perceiving that he was not yet hardened in crime; and I was still further encouraged by seeing a glow of pleasure on his countenance at my proposal to give him a bed in an out-office, and breakfast and dinner every day, provided he would give up his wicked practices, of which I tried to show him the evil; and after he had done some errands, and what he was capable of doing in our farmyard, attend a school every day. Well-washed, well-clad, and looking fresh and strong after even one week of his new life, Ned C—— went to the school, where he did full justice both to himself and his master. There was nothing which the master was capable of teaching that Ned did not show he should, after a while, be capable of learning. There was one branch of knowledge in which his progress gave me by far the greatest satisfaction,—I mean the knowledge which maketh wise unto salvation. He attended a Sunday-school, and quickly evinced a deep interest in the lessons there imparted. His behaviour became marked by so much propriety, that he obtained, I may say, even the respect of those who had known the circumstances of his early life. Still, as he grew up, I could often observe symptoms of an uneasy and unsettled mind; and on my questioning him about it one day when he was just eighteen, he confessed to me that the one thing he desired more than any other was to get away from the scene of his juvenile wickedness, and to seek his fortune in some foreign land. I could not blame him, and much as I valued him as a useful and trusty servant, I resolved to forward his wishes by every means in my power.

'I had then some friends abroad, and to them I recommended Edward C——. He had laid by some money while in my service, to which I was glad to make such an addition as would provide him with a respectable outfit. The morning on

which he went away he said he had a favour to beg of me; I saw his lip tremble and his cheek flush as he told me what the favour was. It was only this; that if I still had the remains of the cambric handkerchief which had been the means of introducing him to me, I would allow him to take it with him. It would be of use to him in two ways, he said; it would remind him of what he once was, and keep him humble; and it would also remind him of her who had rescued him from his degraded condition, and keep him grateful. It was with many tears that I gave him the handkerchief; it had my name embroidered on one corner; he gazed on the letters, and folding it up in paper, he asked my prayers and blessing, and departed. I heard from him in two months. He had got a situation in a counting-house. He continued to write frequently, and in about a year I had the joy of receiving a letter from his master, informing me that Edward C——was every day standing higher in his confidence, and he had little doubt that he would one day do well in business for himself.

'Some years elapsed, and then the change in my circumstances took place, by which I was plunged from affluence into comparative poverty. I had to part with everything except what would enable me to furnish in the simplest style two humble apartments, into which I moved when I left my house. I could not bear to inform Edward C——of the reverse I had undergone, and when I wrote merely mentioned that I had changed my abode, but this would not satisfy him. He begged to know why I had left my pleasant home, but I evaded his questions till I could evade them no longer, for he accused me of want of confidence in him, and of keeping back something that he ought to know. I then told him all, at the same time assuring him that I was very happy, as happy as ever, and that one of my pleasantest thoughts was that I had been the means of his rescue and prosperity.

'It was several months before I heard from him again, and one day, just as I began to wonder at his silence, I was told that a gentleman wanted to see me. Not feeling well, I was unwilling to admit strangers, and sent to request that he would send up his name. The servant brought in reply, not a card, but a small parcel, which when I opened it, I found to contain *the cambric handkerchief!* It was Edward C——. After the receipt of my last letter he had been prevented from coming home at once by the necessity of arranging a large amount of business in the concern, of which he was now a junior partner! The moment he was free, he set out for his native land that he might see me. I need only add, there was no service which he could offer that he did not warmly and affectionately press upon me, but the utmost he could prevail upon me to accept was a long lease of this pretty little cottage, with the adjoining garden and field, where I live with every needful comfort, and possessing the ability to show kindness to the poor and the afflicted. Edward C—— returned to his adopted home, taking the cambric handkerchief with him, and he does not allow me to forget him!'

'Well, Mrs. Harman, your's is really a very interesting story,' said her young guest, 'and it has made me feel that if I had that poor boy whom I handed over to the police, I should be much disposed to see if some means could not be adopted for endeavouring to reclaim him.'"

If we did but observe the allowances our reason makes upon reflection, when our passion is over, we could not want a rule how to behave ourselves again on the like occasions.

Epistle of George Fox.

About this time great stirs were in the nation, the minds of people being unsettled. Much plotting and contriving there was, by the several factions, to carry on their several interests. And a great care being upon me, lest any young or ignorant people, that might sometimes come amongst us, should be drawn into that snare, I was moved to give forth the following epistle as a warning unto all such:—

All Friends everywhere keep out of plots and bustling, and the arm of flesh; for all these are amongst Adam's sons in the fall, where they are destroying men's lives like dogs, beasts, and swine, goring, rending and biting one another, destroying one another, and wrestling with flesh and blood. Whence arise wars and killing but from the lusts? Now all this is in Adam in the fall, out of Adam that never fell, in whom there is peace and life. Ye are called to peace, therefore follow it; and that peace is in Christ, not in Adam in the fall. All that pretend to fight for Christ, are deceived; for his kingdom is not of this world, therefore his servants do not fight. Fighters are not of Christ's kingdom, but are without Christ's kingdom; his kingdom stands in peace and righteousness, but fighters are in the lust; and all that would destroy men's lives, are not of Christ's mind, who came to save men's lives. Christ's kingdom is not of this world; it is peaceable: and all that are in strife, are not of his kingdom. All that pretend to fight for the gospel are deceived; for the gospel is the power of God, which was before the devil, or fall of man was; and the gospel of peace was before fighting was. Therefore they that pretend fighting are ignorant of the gospel; and all that talk of fighting for Sion are in darkness; for Sion needs no such helpers. All such as profess themselves to be ministers of Christ, or Christians, and go about to beat down the whore with outward, carnal weapons, the flesh and the whore are got up in themselves, and they are in a blind zeal; for the whore got up by the inward ravening from the Spirit of God; and the beating down thereof, must be by the inward stroke of the sword of the Spirit within. All such as pretend Christ Jesus, and confess him, and yet run into the use of carnal weapons, wrestling with flesh and blood, throw away the spiritual weapons. They that would be wrestlers with flesh and blood, throw away Christ's doctrine; the flesh is got up in them, and they are weary of their sufferings. Such as would revenge themselves, are out of Christ's doctrine. Such as being stricken on one cheek, would not turn the other, are out of Christ's doctrine: and such as do not love one another, nor love enemies, are out of Christ's doctrine. Therefore, ye that are heirs of the blessings of God, which were before the curse and the fall were, come to inherit your portions; and ye that are heirs of the gospel of peace, which was before the devil was, live in the gospel of peace, seeking the peace of all men, and the good of all men; and live in Christ, who came to save men's lives out of Adam in the fall, where they destroy men's lives, and live not in Christ. The Jews' sword outwardly, by which they cut down the heathen, was a type of the Spirit of God within, which cuts down the heathenish nature within. So live in the peaceable kingdom of Christ Jesus. Live in the peace of God, and not in the lusts, from whence wars arise. Live in Christ, the Prince of Peace, the way of God, who is the second Adam, that never fell; but live not in Adam in the fall, in the destruction where they destroy one another. Therefore come out of Adam in the fall, into the second Adam that never fell. Live in love and peace with all men; keep out of all the bustlings in the world; meddle not with the powers of the earth; [illegible] the kingdom, the way of peace. Ye that a[illegible] of grace, heirs of the kingdom, heirs of the heirs of salvation, saints of the most Hig[illegible] children of God, whose conversation is in [illegible] that is, above the combustions of the ear[illegible] your conversation preach to all men, and y[illegible] nocent lives, that they who speak evil of [illegible] holding your godly conversation, may glorif[illegible] Father which is in heaven. All Friends [illegible] where, this I charge you, which is the word [illegible] Lord God unto you all, 'Live in peace, in[illegible] the way of peace,' and therein seek the pe[illegible] all men, and no man's hurt. In Adam in t[illegible] is no peace; but in Adam out of the fall, is [illegible] so ye being in Adam which never fell, it [illegible] that overcomes, and not hatred with hatr[illegible] strife with strife. Therefore live all in the [illegible] able life, doing good to all men, and seeki[illegible] good and welfare of all men. 1659.

Transplanting Trees.

A friend writes us:—"The following is [illegible] tract from the very best philosophical work [illegible] Physiology of Vegetation and the Theory and [illegible] tice of Horticulture that has ever been pub[illegible] I think the story is so important and of such [illegible] utility, that I copy it for you and submit it fo[illegible] lication."—We give place to it cheerfully. [illegible] *argument* appears to be reasonable, but we [illegible] to rely upon experience and results. Persons [illegible] the most practical knowledge upon the subject [illegible] in their opinions as to the *best period* for trans[illegible] ing; but are generally ready to concede that [illegible] depends upon the variety of the tree, its siz[illegible] nature of the soil, and the degree of care ob[illegible] in the operation. We have known equal suc[illegible] be attained in autumn and spring; and again [illegible] failures in both. We believe that where a t[illegible] transplanted as it ought to be, it makes very [illegible] difference whether it is done in October, Nov[illegible] or March.

As soon as man attempted to beautify his [illegible] dence with trees planted round it, he would [illegible] rally obtain them from the woods, and he then [illegible] find that, of many that he removed, all or so[illegible] least would die; if however he persevered, he [illegible] at last discover that while constant failure att[illegible] his efforts at one time, comparative success [illegible] crown them at another; and he would thus b[illegible] to investigate, according to his skill, the cau[illegible] his success or failure. Out of this would gr[illegible] time the art of transplanting—one of the mos[illegible] portant operations of the gardener. If there i[illegible] one part of the art of Horticulture, in which [illegible] *hoc* has been mistaken for *propter hoc* more [illegible] monly than another, it is surely in what co[illegible] transplantation. And yet the rationale is [illegible] enough, if we do not labour to render it confus[illegible] imaginary refinements.

When a plant is taken out of the ground for t[illegible] planting, its roots are necessarily more or less in[illegible] by the process, and consequently it is less ab[illegible] support the stem than it was before the mutil[illegible] took place. But the importance of roots to p[illegible] is not alike at all seasons; in summer, when [illegible] is the greatest demand upon them in consequen[illegible] the perspiration of the foliage, they are most e[illegible] tial; in winter, when the leaves have fallen, [illegible] are comparatively unimportant, as is evident [illegible] a very common case. Let a limb of a tree b[illegible] off in full leaf in June, its foliage will pres[illegible] wither, the bark will shrivel and dry up, and [illegible] whole will speedily perish; but if a similar lim[illegible] cut off in November, when its foliage has natu[illegible] fallen off, it will exhibit no sign of death d[illegible] winter, nor till the return of spring, when it

dying effort to recover, but the means it do so, namely, the emission of leaves, only tes its end.

The two propositions really include all the most nt parts of the theory of transplantation, as sently be seen. It is the powerful perspira- rion of the leaves of diciduous trees which transplanting them in a growing state so , that for practical purposes it may be called ssible, for the operation is necessarily attended utilation of the roots which feed the leaves. ne period, then, can the operation be performed plants are growing. Even if the buds are shing, the process should be avoided, because ately after that period the demand upon the greatest. The season, then, which ought to en, is the period which intervenes between the the leaf in autumn and the earliest part of ing, before the sap begins to move, and the d winds of that season to prevail; so that the time at which planting can be effected is the , nd which in all respects is conformable to

oon as a plant has shed its leaves, it is as at rest for the season as it will be at any ent period, unless it is frozen; its torpor, in- s greater at that time, because its excitability letely exhausted by the season of growth, and had no time to recover it. If at that time a wounded, a process of granulation will com- , just as it does in cuttings; and from that ation, which is a mere development of the r system, roots will eventually proceed. Now, bvious, that since roots *must* be wounded, in ocess of transplantation, the sooner the wound ile the better, because it has the longer time ch to heal; and therefore the earlier in the n transplanting is effected, the less injury will tained by the plant submitted to the process; technical language of the gardener, "it has ore time to establish itself." Deciduous trees y begin to assume their autumnal hue towards d of September, and as soon as that has hap- , they may be transplanted with safety. There- is demonstrably clear from the theory deduced the physiology of vegetation, that the months September to December are the most favoura- r trasplanting deciduous trees, and that March, and May are the worst. And the same periods lso most favourable to Evergreens.

Extracted for "The Friend."

ace sought for abroad, cannot be found; and ll never be found by the heart, that, while it is tute of the Spirit of Christ, wants the very dation upon which alone peace can be estab- d.

ur own experience should convince us, that no table counsel, no effectual help, no lasting dy, is to be found but in Him who is the dom, sanctification, and complete redemption" ose whose trust and confidence *are* in Him e.

is the inordinate love of self, that makes us or submission to the will of others, and he that s not freely submit to that superiority under ch Providence has placed him, demonstrates, *the flesh is not overcome.*

here is not a more violent, or a more dangerous my than our fleshly nature, when it does not ly consent to the law of the Spirit. Christ be- e the lowest, and the servant of all, that human le might be subdued by his humility.

There is no holiness, if the Lord withdraw his sence; no wisdom profiteth, if his Spirit cease lirect; no strength availeth without his support; chastity is safe without his protection; no watchfulness effectual, when his holy vigilance is not our guard.

The whole world has not power to exalt that which Truth has subjected to himself; nor can the united praise of *every* tongue move him whose hope is established in Christ, the Redeemer and Saviour of the world.

In our own nature we are as unsettled as the sand upon the mountain; but in Christ we have stability; without his Spirit we are cold and insensible as darkness and death; but are kindled into light and life by the fire of his love.

Christ teacheth not like men, with the clamor of *uncertain* words, or the confusion of opposite opinions, or with the strife of formal disputation, in which victory is more contended for than truth, but in still and soft whispers to place all hope and dependence upon Him, to desire nothing above Him; and, above all in heaven and on earth, most ardently to love Him.

The testimony of man is fallible, partial, and changeable; but the judgment of Christ *is* true, righteous, and permanent as his own being, therefore must we refer our cause to Him, and not trust to the blind determinations of our own minds.

Blinded by self-love we are easily led from the judgment of Truth, but if God alone was the pure object of all our intentions and desires, we should not be troubled when the truth of things happens to be repugnant to our own sentiments, and opposed to our own wills and desires.

Nature abhors the death of self; will not be restrained, will not be subordinate, but reluctantly obeys when obedience is unavoidable; is always labouring for her own interest; does nothing good for its own sake; refers all excellence to herself, argues and contends for her own wisdom and her own goodness, and with partial commendation, applauds those most, that are most like herself.

Selected.

The South Pacific.

Some fresh marine phenomena were seen to-day, among which none were more beautiful than a species of jelly-fish, in form resembling a glass tube, six or seven inches in length, with one end closed, and covered with opaque protuberances. With these the ocean was illuminated at night in a brilliant manner, and many of those that we took, exhibited, on being touched, a splendid phosphorescent light, sufficiently strong to show the time by a common watch, when it was placed near a single specimen. They showed perhaps few signs of animation, excepting the power of emitting or retaining light at pleasure. Several other species varying in form and size, are numerous here, but from their half-liquid and perishable substance, it is almost impossible to preserve them. Probably most of these several varieties are luminous; some of them are of a mushroom shape, and have the power to move along through the water, by dilating and retracting their richly fringed head.. Grampuses, sharks, porpoises, dolphins, and some small striped fishes, called by the sailors, pilot-fishes, are common in this part of the Pacific. The little pilot-fishes attract a good deal of notice from their propensity to accompany the vessel: they are seen for hundreds of miles, perhaps I might say thousands of miles, frolicking close before the vessel's stem, and occasionally darting aside after some particle that attracts them for a moment, from their position in the van. On the morning of the 27th, a vessel was discovered ahead, and watched with shipboard interest, as it gradually augmented in size, till about noon a large whaler "brought to" close alongside us. English colours were displayed on both sides, and Captain ——, of the Elizabeth, of Sidney, accompanied by the surgeon of the vessel, came on board. They had been out eight or nine months, and succeeded in securing twelve hundred barrels of oil, which amounts to about one-third of a full cargo. After obtaining a few fresh provisions for some of their oil, and accepting some tracts, &c., our visitors returned to the ship, and in a few hours we lost sight of each other. The call from these marine sportsmen was quite an incident in our monotonous life; though, from the natural and acquired characters of the parties, such interviews are not generally productive of much enjoyment. What a strange life is that of a whaler, roving the wide ocean for months and years in quest of fish—banished from almost every comfort that the humblest landsman may ordinarily possess! But the prospect of gain reconciles to present privation, and the promise of hope stimulates to exertion, and supports them in their dangerous career. There were five men at the mast-heads of the ship, looking out for whales, as she ranged over the blue swelling expanse. The space of ocean surveyed by these rangers, is incredibly large. If we estimate the horizon as seen from the mast-head at about thirty-six superficial miles, which are changed every hour and a half, nearly three hundred square miles will be overlooked in twelve hours; and there are several hundred ships employed in the South Seas. Each of these is probably out from two to four years at a time.

1835. I need not describe the geographical position of Tahiti; it is the largest island in the Georgian and Society cluster; and considered to be about one hundred miles in circumference. Together with Eimeo, a small adjacent island to the westward, subject to the same government and laws, the population is estimated at ten thousand persons; there is no doubt the above is a tolerable approximation to the truth, and that however it may have been formerly, the islands are now very thinly peopled. In fact the interior of Tahiti is not inhabited at all—the low lands next the sea, which constitute but a small portion of the whole being universally selected by the natives for the place of their abode: upon this fertile margin along the coast, their little huts of poles, mats and thatch, are scattered with great irregularity—not in well defined clusters or villages, but singly or otherwise, as the course of a stream or the boundary of a plantation, may suit best. The mountainous tracts inland are little frequented, although from the luxuriance of the vegetation, I conclude that many parts are capable of cultivation. Some fruits are produced spontaneously, and in the remoter valleys are never gathered by human hands. The highest ridges, reckoned about seven thousand feet above the ocean, are covered with rich forests, whose verdure never fades; and the deep shade of valleys, vocal with the thunder of descending waters, is of course still more prolific of vegetation. But whatever the inland districts may produce, or may be capable of producing, the low tract of country stretching along the circumference of the island, seems to be fully adequate to maintain the present population, without much culture or care on the part of those who gather the fruits. The taro (caladum exuberatum) an excellent farinaceous vegetable, the yam (dioscoria alata) and the sweet-potato (convolvulus batatus) involve some little labour; but many of the fruits demand only occasional weeding from the overwhelming growth of guavas, and protection from the ravages of hogs, with which the place is overrun. The gigantic cocoa-nut tree bears fruit without intermission the year round, and furnishes at once the means of shelter, food and clothing. The leaf is used for

mats, and thatch, and fuel; the bark is converted into cloth; the timber is valuable for many purposes; the nutshell is the native basin; the kernel is ground up into a nutritious food; the milk is universally drunk; and the ripe nut affords abundant oil, both for home use and exportation. The bread-fruit too is highly prized; as a vegetable it is both palatable and wholesome, and from the bark of the large trees is made the cloth in common use by the Tahitians. Oranges, lemons, limes, melons, papaw, bananas, pine-apples and pumpkins abound among indigenous and exotic fruits and vegetables of this island. If the shore is thus teeming with spontaneous provision for the wants of the inhabitants, the surrounding ocean is not less prolific in affording an endless variety of fish. Turtles, shell-fish, and many half-animated marine substances used as food, are found within the reefs.

When I mention the reefs, I cannot forbear making a few remarks on these extraordinary breakwaters, which are of the highest value to the South Sea islands. Take Tahiti for instance. Without this coral breast-work there is not a single harbour in the island; but with it, the coast, with few exceptions, is sheltered from the ocean, and circumnavigated with safety in the smallest canoe. In one or two places the coast is exposed; but excepting these openings, and a number of narrow passes for boats or ships, a bank of sand and coral, nearly even with the surface of the water, varying in distance from the beach from half a mile to a mile and a half, extends round the whole island, and defends it from the sea. On this wonderful barrier, the mighty Pacific breaks in ceaseless thunder, from age to age; but within the providential limit the raging deep is chained, and all is tranquil as a lake; ships of the largest size may enter and ride securely, and the light canoe of the native has a safe access to every part of the coast. We have all heard of coral reefs long ago; but till we reached this place, I may confess I had not the least idea of the characteristic peculiarity, in the natural shelter furnished by them among the South Sea islands.

Island of Tanai, Sandwich Group.—Being kindly furnished with a steed and conductor, I undertook an excursion along the seashore, to see a curious cavern in the rock, through which the surf rushes to a considerable distance underground, and hurls a column of foam with tremendous force into the air, like a magnificent fountain. There are several such cavities in the lava, on the shore of this island; the largest we saw lies a considerable distance from the anchorage of Koloa, to the westward. The coast is composed of rude masses of lava, extending in every rugged form along the margin of the sea, and occasionally rising into huge perpendicular cliffs. The phenomenon in question is merely caused by a passage which leads from beneath the surf, when it rolls up the strand, and opens like a well, some little distance inland, sufficiently removed from the breakers to give the fountain an isolated appearance. When a heavy swell breaks on the shore, the air in this unexplored cavern is driven with tremendous noise through its sounding caves, and from one or more mouths is projected a momentary blast of white foam, to the height probably of twenty or thirty feet. As the wave retires, all is still on the black broken rocks; the mouth of the cave looks like a natural well half filled with masses of stone, which conceal its depth; but as the rolling billow thunders towards the coast, a deafening noise is heard underneath, which increases in violence till it ends in a fierce, loud hiss; as steam discharged from the valve of a steam engine; and in a moment afterwards, a cloud of water and foam is driven high into the air.

THE BROOK.

I come from haunts of coot and hern,
I make a sudden sally,
And sparkle out among the fern,
To bicker down a valley.
By thirty hills I hurry down,
Or slip between the ridges;
By twenty thorps,—a little town,—
And half a hundred bridges;
Till last, by Philip's farm I flow
To join the brimming river:
For men may come, and men may go,
But I go on forever.

I chatter over stony ways,
In little sharps and trebles;
I bubble into eddying bays—
I babble on the pebbles;
With many a curve my banks I pet,
By many a field and fallow,
And many a fairy foreland, set
With willow-weed and mallow.
I chatter, chatter, as I flow
To join the brimming river:
For men may come, and men may go,
But I go on forever.

I wend about and in and out;
With here a blossom sailing,
And here and there a lusty trout,
And here and there a grayling,—
And here and there a foaming flake
Upon me, as I travel,
With many a silvery water-break
Above the golden gravel—
And draw them all along, and flow
To join the brimming river:
For men may come, and men may go,
But I go on forever.

I steal by lawns and grassy plots,
I slide by hazel covers,
I move the sweet forget-me-nots
That grow for happy lovers.
I slip, I slide, I gloom, I glance,
Among my skimming swallows,
I make the netted sunbeams dance
Against my sandy shallows.
And in and out I curve and flow
To join the brimming river:
For men may come, and men may go,
But I go on forever.

A. Tennyson.

Extract from Ambrose Rigges' Epistle.

Truth did and still doth lead all who are faithful to it to integrity even in the unrighteous mammon, and to let their yea be yea and their nay be nay, between man and man in outward things; if this had been lived in by all who profess it, no just occasion of offence had been given to any; for they who retain their integrity to the truth and life of righteousness manifested, can live with a cup of water and a morsel of bread in a cottage, before they can hazard other men's estates to advance their own: such are not forward to borrow nor to complain for want, for their eye and trust is to the Lord, their preserver and upholder; and he that hath continued the little meal in the barrel, and the oil in the cruse, hath not failed to such, till God hath sent further help. It is so far below the nobility of christianity, that it is short of common civility and honest society amongst men, to twist into men's estates, and borrow upon the truth's credit (gained by the just and upright dealings of the faithful) more than they certainly know their own estates are likely to pay; and with what they borrow, reach after great things in the world, appearing to men to be what, in the sight of God and truth, they are not, seeking to compass great gain to themselves, whereby to make themselves or children rich or great in the world; this is deceit and hypocrisy, and will be blasted.

The honest, upright heart knows how to want as well as how to abound, having learned conten in all states and conditions; a small cottage a little trade is sufficient to that mind, and it wants what is sufficient, for He that clothes the and feeds the ravens, cares for all who trust in The way to be rich and happy in this worl first to learn righteousness; for such were forsaken in any age, nor their seed begging br He that hath but little, let him live according to little, and appear to be what in truth he is; le be content with his own, and to labor with his hands in the thing that is honest, that he may wherewith to give to him that needeth, knowing it is more blessed to give than to receive.

Insect Power.—The muscular strength of in is immense. We once were surprised by a feat formed by a common beetle in the United St We had put the insect, for want of any box at h beneath a quart bottle full of milk upon a table, hollow at the bottom allowing him room to upright. Presently to our surprise, the bottle b slowly to move and glide along the smooth t propelled by the muscular power of the imprise insect, and continued for some time to perambu the surface, to the astonishment of all who witne it. The weight of the bottle and its contents d not have been less than three pounds and a h while that of the beetle was about half an ounc that it readily moved a weight 81½ times exceedin own. A better notion than figures can convey be obtained of this feat by supposing a lad of fif to be imprisoned under the great bell of St. Pa which weighs 12,000 pounds, and to move it to- fro upon a smooth pavement, by pushing wi — Newport has given other instances of insect p equally remarkable. Having once fastened a s kind of *Carabus*, a elegantly-formed ground be weighing three and a half grains, by a silk thr to a piece of paper, he laid a weight on the ha At a distance of ten inches from its load, the in was able to drag after it, upon an inclined plan twenty five degrees, nearly eighty-five grains; when placed on a plane of five degrees inclinat it drew after it one pound and twenty-five gr exclusive of the friction to be overcome in mo its load, as though a man were to drag up a hi similar inclination a wagon weighing two tons a half, having first taken the wheels off. Accor to the same excellent authority, the stag beet *Lucanus cervus*—has been known to gnaw a an inch in diameter through the side of an iron ca ter in which it was confined, and on which the m of its jaws were distinctly visible, as proved by phens, who exhibited the canister at one of meetings of the Entomological Society.

Let us look at the powers of insects exercise the act of flying. The house flies—*Musca domes* —that wheel and play beneath the ceiling for h together, ordinarily move at the rate of about feet per second; but if excited to speed, they dart along through thirty-five feet in the same b space of time. Now in this period, as Kirby Spence observe, 'a race-horse could clear only nin feet, which is at the rate of more than a mile i minute.' Our little fly, in her swiftest flight, go more than one third of a mile. Now compare immense difference of the size of the two animal ten millions of the fly would hardly counterpoise racer—and how wonderful will the velocity of minute creature appear! Did the fly equal race-horse in size, and retain its powers in the r of its magnitude, it would traverse the globe with rapidity of lightning. Some of the flies that ha ous gardens shoot along so rapidly that the eye c not follow them in flight.

Nor are these tiny creatures less masters of

running and leaping. De Lisle mentions a minute as almost to be invisible, which ran six inches in a second, and in that space was ed to have made one thousand and eighty This, according to the calculation of Kirby ence, is as if a man whose steps measured o feet, should run at the incredible rate of miles in a minute. Every one has had n to observe, not always without an emotion er, the leaping powers of the flea—*Pulix s.* A bound of two hundred times its own is a common feat, as if a man should jump hundred feet, or a quarter of a mile! What hat insects were not allowed to be competi- the athletic games of old.

For "The Friend."

BIOGRAPHICAL SKETCHES,

listers and Elders, and other concerned mem- rs of the Yearly Meeting of Philadelphia.

ANN PARSON.

(Continued from page 349.)

ing the time of her last illness, she addressed ther Abraham, telling him she did not ex- recover, and therefore desired to speak with She then said, "I have travelled a pretty my time, and according to my ability, have ed in the love of God, and for the service of in good will to all men. Which [love and vill] springs in my bosom now as fresh as Blessed be his name! I desire thee, if I go, ber my kind love to Friends, and desires that nay stand in the counsel of God. I have ejoiced, and been glad to see Friends stand in mse1, and keep their places in the Truth, and often wounded my spirit to see those that nade a profession of the Truth, some of them ildren of good parents, using undue liberty, pleasure in vanity and folly, neglecting that would be to their everlasting peace. It is vice to Friends, that they stand in the coun- God, which will be to them as a mighty rock eary land. [This will] enable them to wade h the various exercises which may fall to hare in this troublesome world. I have found experience to be a sure help in every needful ifficult time. When exercises seemed to sur- me on every hand like the billows of the —then I found to stand in the counsel of was the only place of refuge that I could re- nto. There I found safety, and was often hed, strengthened and comforted by the in- e of the love of God within me. It is my e and counsel to Friends to be careful to keep etings, and patiently wait therein to feel the adowing power of Truth to strengthen and their hope in God. This brings down and s everything that would exalt self above the able government of Truth."

ter saying this, being very weak, she lay in stillness, for some time. She then broke forth ervent supplication, beseeching the Lord that ould carry on the work he had begun, that might flock to his church like doves to the ows, that sin and iniquity might cease, and eousness and Truth cover the earth as the rs cover the sea. She then fervently besought o bless his people, her near relatives, and the anion of her life. For him she prayed that ight be favoured with the visitation of Divine and know his last days to be his best days, he might find admittance into rest and peace time to him here should be no more.

e was, her friends say, "a good example, of offensive life, patient in affliction, and died in unity with the church," on 9th day of the Tenth month, 1732. She was in the 57th year of her age, and had laboured diligently, earnestly, and effectually in the ministry of the gospel thirty-three years.

WILLIAM LAWRENCE.

William Lawrence, who filled the station of an elder to the satisfaction of his friends, was an inhabitant of Philadelphia. He is said to have been "of an inoffensive life and conversation, and careful in the attendance of meetings; departing this life in an advanced age, in good esteem." His death took place, Tenth mo. 12th, 1732.

ISAAC SHOEMAKER.

Isaac Shoemaker, the son of Peter Shoemaker, was born at Chresiham in Germany, in 1669, and, removing with his parents to Pennsylvania when still young, settled at Abington. His parents had been convinced of the principles of Friends, and he was educated therein. Being brought under the baptizing power of the Holy Spirit, he gave up his own will, and was, through the washing of regeneration, and the renewing of the Holy Ghost, made a member of the church of Christ. His residence, after his marriage, was at Germantown.

He was, whilst young in years, brought into the ministry, and although his communications were never long, yet being delivered in the simplicity, and attended with the Divine unction, they were refreshing to the church, and well received by all. "His life and conversation," his friends say, "were innocent and exemplary." He died Twelfth mo. 12th, 1732; aged 63 years.

RICHARD KENDERDINE.

This Friend was an elder of Abington Monthly Meeting, and resided at Horsham. He was a "diligent attender" of meetings, and "serviceable" therein. He died in the Second month, 1733; aged 50 years.

REBECCA REESE.

Rebecca Reese, the widow of Edward Reese, of whom we have already given a sketch, was born in Wales, and, on removing to Pennsylvania, she with her husband settled near Haverford. She had received the truth by conviction, and in due time was called into the ministry, which she exercised chiefly in the "British language." She was very diligent in the attendance of meetings, for several years generally representing Haverford meeting of ministers in the superior Meetings. The records indicate the truth of her friends' testimony, which says her ministry "was generally well received, and she lived in unity and love with Friends." Her death took place, Second mo. 19th, 1733. She was buried at Merion.

SARAH OWEN.

Sarah Owen was a daughter of that valuable minister of the gospel, John Songhurst. Many were the trials and vicissitudes of her lot. Whilst comparatively young in years, she was married, in the year 1686, to Zachariah Whitpain, of Philadelphia. In a few years, she was left a widow, and in the year 1697, was united to Charles Saunders. This connection was but brief, he being removed from her by the great pestilence, in the summer of 1699.

It appears that trial and affliction were but instruments in the Lord's hand for preparing her for usefulness in his church and family. Very serviceable she was in meetings for discipline, and her growth in the Truth probably attracted the attention, and fixed the affections of Griffith Owen, who was married to her in the year 1704.

She was early appointed an elder in the church, and appears to have been diligent in fulfilling her religious duties. There is left behind abundant traces of her labours, in meetings for discipline, and in meetings of ministers and elders. She lived in "good repute and esteem," and died lamented, Sixth mo. 4th, 1733.

MARY WADE.

Mary Wade, of Alloways Creek, West Jersey, was an elder in the Truth. Her testimony says, "She was a tender-hearted woman, an affectionate friend, careful to relieve the poor, to visit the sick and such as were in distress either of body or mind. She was zealous for Truth's honour, the peace and unity of the church, of which she was an overseer and an elder. She was faithful to discharge her duty both by word and example, as a tender mother over her own house, and in the church."

She is supposed to have been the wife of Samuel Wade, an elder also, and she deceased in the Ninth month, 1733.

JOHN DENN.

John Denn was one of the first settlers at Alloways Creek. He was convinced of the Truth in England, and continuing faithful therein, he was, about the year 1720, called into the ministry. Being obedient to the call, and watchful to the openings of the Holy Spirit, he grew in his gift, and although advanced in years, became a useful instrument in the hand of the Lord. His ministry was "in gospel love" "to the comfort and edification of his brethren and sisters." "He was well esteemed amongst his friends and neighbours, exemplary in life and conversation, a diligent attender of meetings both for worship and discipline, and in good unity amongst" Friends. His gospel labours, as far as appears, were confined within the limits of his own Yearly Meeting. His death took place, Ninth mo. 8th, 1733.

(To be continued.)

"Knowledge is Power."

[From an interesting and instructive work recently published entitled, "Knowledge is Power," we take the following extracts.]

In the year 1828 there came to New York a white man named John Tanner, who had been thirty years a captive among the Indians in the then North-west Territory. He was carried off by a band of these people when he was a little boy, from a settlement on the Ohio river, which was occupied by his father, who was a clergyman. The boy was brought up in all the rude habits of the Indians, and became inured to the abiding miseries and uncertain pleasures of their wandering life. He grew in time to be a most skilful huntsman, and carried on large dealings with the agents of the Hudson's Bay Company, in the skins of beavers and other animals which he and his associates had shot or entrapped. The history of this man was altogether so curious, that he was induced to furnish the materials for a complete narrative of his adventures; and, accordingly, a book, fully descriptive of them, was prepared for the press by Dr. Edwin James, and printed at New York, in 1830. It is of course not within the intent of our little work to furnish any regular abridgment of John Tanner's story; but it is our wish to direct attention to some few particulars, which appear to us strikingly to illustrate some of the positions which we desire to enforce, by thus exhibiting their practical operation.

The country in which this man lived so many years was the immense territory belonging to the

United States, which at that period was covered by boundless forests which the progress of civilization had not then cleared away. In this region a number of scattered Indian tribes maintained a precarious existence by hunting the moose deer and the buffalo for their supply of food, and by entrapping the foxes and martens of the woods and the beavers of the lakes, whose skins they generally exchanged with the white traders for articles of urgent necessity, such as ammunition and guns, traps, axes, and woolen blankets; but too often for ardent spirits, equally the curse of savage and of civilized life. The contact of savage man with the outskirts of civilization perhaps afflicts him with the vices of both states. But the principle of exchange, imperfectly and irregularly as it operated among the Indians, furnished some excitement to their ingenuity and their industry. Habits of providence were thus to a certain degree created; it became necessary to accumulate some capital of the commodities which could be rendered valuable by their own labour, to exchange for commodities which their own labour, without exchange, was utterly unable to procure. The principle of exchange, too, being recognized among them in their dealings with foreigners, the security of property—without which, as we have shown, that principle cannot exist at all—was one of the great rules of life among themselves. But still these poor Indians, from the mode which they proposed to themselves for the attainment of property, which consisted only in securing what nature had produced, without directing the course of her productions, were very far removed from the regular attainment of those blessings which civilized society alone offers. We shall exemplify these statements by a few details.

The extent of country over which these Indians roamed, was not less than five hundred thousand square miles—an area of the earth's surface equal to that of England, Scotland, Ireland, France, Belgium, Holland and Portugal combined. They had the unbounded command of all the natural resources of this immense territory; and yet their entire numbers did not equal the present population of a single county in one of the New England States. It may be fairly said, that each Indian required the use of at least a thousand acres for his maintenance and support. The supplies of food were so scanty—a scantiness which would at once have ceased had there been any cultivation— that if a large number of these Indians assembled together to co-operate in their hunting expeditions, they were very soon dispersed by the urgent desire of satisfying hunger. Tanner says, "We all went to hunt beavers in concert. In hunts of this kind the proceeds are sometimes equally divided; but in this instance every man retained what he had killed. In three days I collected as many skins as I could carry. But in these distant and hasty hunts little meat could be brought in; and the whole band was soon suffering with hunger. Many of the hunters, and I among others, for want of food became extremely weak, and unable to hunt far from home." What an approach is this to the case of the lower animals; and how forcibly it reminds us of the passage in Job (c. iv., v. 11,) "The fierce lion perisheth for lack of prey." In another place he says, "I began to be dissatisfied at remaining with large bands of Indians, as it was usual for them, after having remained a short time in a place, to suffer from hunger." These sufferings were not, in many cases, of short duration, or of trifling intensity. Tanner describes one instance of famine in the following words:—"The Indians gathered around, one after another, until we became a considerable band, and then we began to suffer from hunger. The weather was very severe, and our suffering increased. A young woman was the first to die of hunger. Soon after this, a young man, her brother, was taken with that kind of delirium or madness which precedes death in such as die of starvation. In this condition he had left the lodge of his debilitated and desponding parents; and when, at a late hour in the evening, I returned from my hunt, they could not tell what had become of him. I left the camp about the middle of the night, and, following his track, I found him at some distance, lying dead in the snow."

This worst species of suffering equally existed at particular periods, whether food was sought for by large or by small parties, by bands or by individuals. Tanner was travelling with the family of the woman who had adopted him. He says, "We had now a short season of plenty; but soon became hungry again. It often happened that for two or three days we had nothing to eat; then a rabbit or two, or a bird, would afford us a prospect of protracting the sufferings of hunger a few days longer." Again he says, "Having subsisted for some time almost entirely on the inner bark of trees, and particularly of a climbing vine found there, our strength was much reduced."

The misery which is thus so strikingly described, proceeded from the circumstance that the labour of the Indians did not take a profitable direction; and that this waste of labour (for unprofitable occupations of labour are the greatest of all wastes) arose from the one fact, that in certain particulars these Indians laboured without appropriation. They depended upon the chance productions of nature, without compelling her to produce; and they did not compel her to produce, because there was no appropriation of the soil, the most efficient natural instrument of production. If the Indians had directed the productive powers of the earth to the growth of corn, instead of to the growth of foxes' skins, they would have become rich. But they could not have reached this point without appropriation of the soil. They had learned the necessity of appropriating the products of the soil, when they had bestowed labour upon obtaining them; but the last step toward productiveness was not taken. The Indians, therefore, were poor; the white settlers who have taken this last step are rich.

The imperfect appropriation which existed among the Indians, preventing, as it did, the accumulation of capital, prevented the application of that skill and knowledge which is preserved and accumulated by the division of employment. Tanner describes a poor fellow who was wounded in the arm by the accidental discharge of a gun. As there was little surgical skill among the community, because no one could devote himself to the business of surgery, the Indian, as the only chance of saving his life, resolved to cut off his own arm; "and taking two knives, the edge of one of which he had hacked into a sort of saw, he with his right hand and arm cut off his left, and threw it from him as far as he could." The labour which an individual must go through when the state of society is so rude that there is scarcely any division of employment, and consequently scarcely any exchanges, is exhibited in many passages of Tanner's narrative. We select one. "I had no pukkavi, or mats for a lodge, and therefore had to build one of poles and long grass. I dressed more skins, made my own moccasins and leggins, and those for my children; cut wood and cooked for myself and family, made my snow-shoes, etc. All the attention and labour I had to bestow about home sometimes kept me from hunting, and I was occasionally distressed for want of provisions. I busied myself about my lodge in the night-time. When it was sufficiently light I would bring wood, and attend to other things without; at other times I was repairing my snow-shoes, or my own o children's clothes. For nearly all the winter I but a very small part of the night."

Tanner was thus obliged to do every thin himself, and consequently to work at very disadvantage, because the principle of exch was so imperfectly acted upon by the people a whom he lived. This principle of exchange wa perfectly acted upon, because the principle of propriation was imperfectly acted upon. Th cupation of all, and of each, was to hunt gam prepare skins, to sell them to the traders, to sugar from juice of maple-trees, to build huts, to sew the skins which they dressed and the kets which they brought into rude coverings their bodies. Every one of them did all of things for himself, and of course he did them imperfectly. The people were not divided hunters and furriers, and dealers, and sugar-ma and builders, and tailors. Every man was his hunter, furrier, dealer, sugar-maker, builder, tailor; and consequently, every man, like Tan was so occupied by many things, that want of and want of rest were ordinary sufferings. He scribes a man who was so borne down and opp ed by those manifold wants, that, in utter de of being able to surmount them, he would lie till he was at the point of starvation, replyin those who tried to rouse him to kill game, th was too poor and sick to set about it. By scribing himself as poor, he meant to say th was destitute of all the necessaries and com whose possession would encourage him to ad the store. He had little capital. The skill w he possessed of hunting game gave him a co command over the spontaneous productions of forest; but, as his power of hunting depended chance supplies of game, his labour necessarily so irregular a direction, and was therefore so productive, that he never accumulated sufficien his support in times of sickness, or for his com able support at any time. He became, there despairing; and had that perfect apathy, that difference to the future, which is the most pit evidence of extreme wretchedness. This man his powerless situation more keenly than his c panions; but with all savage tribes there is a of steady and persevering exertion, proceeding the same cause. Severe labour is succeede long fits of idleness, because their labour tak chance direction. This is a universal case. H of idleness, of irregularity, of ferocity, are characteristics of all those who maintain exist by the pursuit of the unappropriated product of nature; while constant application, orderly rangement of time, and civility to others, r from systematic industry. When the suppor life depends upon chance supplies, the reckless s of a gambler is sure to take possession of the w man; and the misery which results from t chance supplies produces either dejection or fero

John Reynell.

The testimony of the Monthly Meeting of Fri of Philadelphia for the Southern District, respec our esteemed friend John Reynell, deceased:

When those are removed from amongst us, have been useful in their day, and by their ex plary lives and conversation left a good savour hind, it sometimes becomes the duty of survivo transmit to posterity an account of them, so fa least as may prove an incitement to walk by same rule and mind the same thing, which steady perseverance therein to the end, has ena them to become heirs "of a crown of glory fadeth not away." This we trust is now the ha

our valued friend above-named; concerning we are free to communicate the following short ony:

ugh none of us had knowledge of him whilst ded in Great Britain, the land of his nativity, have cause to believe from what he himself pressed, that he was early visited with the ring from on high, and by wisely closing in he offers of Divine love to his soul, he came erience preservation from many temptations lurements wherewith the minds of unwary are liable to be ensnared. To several Friends ated that when about eighteen years of age, ing to embark on a voyage to Jamaica, and thoughtful lest he might lay down the body t place, as had been the case with many, he d, as he believed, a divine assurance that his ould be preserved. During his residence he had a sight given him, of a grievous ca- by means of a violent hurricane, to befal the tants of the island as a chastisement for their ies, which came to pass according to his pros- Soon afterwards an occurrence happening occasioning his being called upon to give ce in a court of judicature, he was required e an oath, which he conscientiously refusing, ed for a time no small trial of his faithfulness; lthough he had few or none outwardly to look strength and encouragement under that exer- he was nevertheless favoured to experience support to be near; so that neither threaten- or persuasion could prevail on him to deviate our christian testimony in that respect. Our ous Society was then almost extinct on that , yet a meeting-house belonging to Friends still ning in Kingston, he was not easy to omit at- ng at the times appointed for meeting, though metimes sat alone therein.

bout the 20th year of his age he came to sylvania, and after his settling in this city, he e a serviceable member among us, both in a ons and civil capacity, cheerfully employing lents and much of his time to beneficial and able purposes, and was often engaged as a e-maker, in reconciling differences. As an he approved himself in faithfulness and up- ness in the discharge of that important trust, well qualified for the station he filled. A example in diligently attending our religious ngs as long as ability of body permitted, and useful in the exercise of the discipline. A man tegrity and sound judgment, and not apt to be led by improper motives.

ing favoured with an affluence of temporal s, he endeavoured to fulfil his duty as a good rd, by liberally communicating of his substance ch as stood in need. Besides his repeated acts unificence throughout the course of his life, the y charitable legacies he bequeathed, by his will, further proofs of his benevolent disposition. So we believe it may justly be said, he was one feared God and hated covetousness.

h the spring of the year 1784, his natural gth evidently impairing, he beheld the prospect is approaching dissolution, with the serenity composure of a christian, and continued gradu- declining for several months, during which he did not impart much respecting his own tual state, being desirous to be more in sub- ce than show, yet found it needful to keep up eady watch until his warfare should be accom- hed. Two Friends visiting him one evening, he tioned "that on looking over his past life, he sensible of many deficiencies, yet expressed a e that all would be well." On the evening pre- s to his departure, he said, "*I am ready. I myself happy, and surrounded with Divine glory*;" and expired the 3rd of the 9th month, 1784, aged 76 years. His corpse being interred the day following, a solemnity covered the minds of many at the grave, which was truly consolatory.

Curious Custom.—The Russians have a whimsical method of perpetuating the knowledge of boundaries of estates. There are no hedges, no trenches, no stone walls in Russia to define the limits of a proprieter's land; instead of these, mounds of earth, either natural or artificially thrown up, serve the purpose. On these mounds, whenever a new division of the land takes place, or when, as is the case at certain intervals, a new survey is thought necessary, some juvenile serf, unwary enough to be caught on the spot, is soundly flagellated with willow wands borne by the surveying party. It is not until he has received a castigation sufficiently impressive to rivet the fact upon his memory, that he is allowed to make his escape; and as this species of practical instruction is administered to a tolerable number of juveniles in the course of the route, it is supposed, and with reason, that for fifty years at least, somebody will be found to be able to testify unmistakably to the locality of the ancient land-mark.

THE FRIEND.

SEVENTH MONTH 19, 1856.

We have placed before our readers full accounts of three Yearly meetings held since that of Philadelphia, and we doubt not they have excited a mournful interest in the minds of many of those who have perused them.

We think it can hardly be disputed by any one having a tolerably correct conception of what once constituted the crowning excellence of our religious Society, that it has greatly lapsed therefrom, and now exhibits wounds and weakness that are not only separating one part from another, but are also preying on its distinguishing characteristics, and in many places threaten a radical change, if not its total extinction. However it may be attempted to conceal the fact, it is lamentably betrayed by the manner in which the business of many meetings, smaller or larger, is often transacted, the hab authority under which the assemblies of Friends originally acted, is very much lost sight of; and the practical belief, that, as the business coming before them is the Lord's work, it should be done as in his sight, and in his holy fear, has greatly given place to the same Spirit and very much the same mode of managing it, as obtains in conducting ordinary schemes of benevolence, or plans for promoting moral improvement. Forms of expression in reference to Divine help and guidance are retained, and perhaps may be considered as in some sense conventional, but the deep spiritual feeling which was truly set forth by those who originally employed them to express what their eyes had seen and their hands had handled, it is to be feared is often wanting. Declamation and debate obtain more and more, as that deep indwelling with the Seed of Divine life which so conspicuously marked the deliberations of the self-denying, devoted servants and handmaidens of the Lord in the beginning, is lost sight of or disregarded; and, not unfrequently, questions involving the dearest interests of the Society are decided on principles of supposed expediency, rather than with deference to the simple requirements of the great Head of the Church, as communicated to those whom He has prepared to hear and understand what the Spirit saith unto the churches.

We are aware there are those, and it may be they are many, who, so far from admitting any degeneracy, are disposed to look upon our religious Society as having emancipated itself from trammels imposed upon it by a measure of ignorance and prejudice, and as advancing into views and feelings more liberal, and more consonant with the enlightened age in which we live, and therefore that it is prepared to occupy a position approximating more nearly to the standard of other christian denominations, and its members justified in mingling with, or copying after them in their various plans for religious culture and improvement. But however this view may gratify the pride or soothe the consciences of those who indulge it, we are persuaded it is a delusion, and that so far from there being an advance in the Society, in a spiritual sense, it is, as a whole, in a low, and we believe we may say, in a grovelling condition; very many of its active influential members contenting themselves with regulating its affairs by the debased standard of human reason and educational knowledge, instead of striving, as did our worthy predecessors, to have all its acts prompted and directed by that wisdom which comes down from above.

For this great change there must be an adequate cause. Wherever it is manifest, whether we profess to adhere to the original faith of Friends, or candidly confess that we believe we have seen the truth more clearly than they did, and therefore cannot adopt what we consider as their defects, there must be a departure more or less general among the members, from the great principle which underlies our system of faith, and the whole structure of our church government, viz. a constant reference to and entire dependence on the perceptible teachings and leadings of Christ by his holy spirit in the heart. "I am satisfied," was the dying testimony of one who had obtained large experience in the school of Christ, "that there is a spirit at work which would lay waste the ancient profession and doctrines of our religious Society, and draw Friends away from the spirituality of that which they have once known; and many are catched with it." This is the key to the difficulties which surround, and the dangers which threaten us. The spirit at work is the spirit of the world, adapting its temptations to the peculiar circumstances of the time and condition of the members; hating and dreading nothing, more than the practical application of the precepts and principles of old-fashioned quakerism.

If these views are correct—and we think they can hardly be controverted—it is evident that the only remedy that can be effectual, must be applied to the members individually, and that while it is obligatory on the body to maintain its testimony against this spirit, not only in its attempts to modify our faith, but in all its other manifestations, the body itself cannot become whole and sound, until a change is effected in the members, through the baptism of the Holy Ghost and fire, purging away the dross, healing that which is diseased, and casting out that which is dead, and spreading corruption. We believe that the shaking which the Society is now undergoing, is designed to bring this about, and however severe the trial, we ought not to desire that the rod should be withheld until the object is attained.

However discouraging the signs of the times may be, there is no reason why those, who, with honesty and integrity are striving not only by precept, but by life and conduct, to maintain the ancient faith of the Society, together with its discipline and order, should faint or grow weary. The fruit of the seed which has been sown, and taken root in the hearts of many, is becoming more and more fully developed; one departure after another, in what are

called minor testimonies, is admitted or advocated; and there is reason to believe these changes will go on in many places, until not a few of those who now profess to be unable to see a difference between true quakerism and that which has been testified against as a modification of it, may have their eyes opened to distinguish the two by their practical effects.

Much has been said at different times, in order to discourage and weaken the hands of the members of Philadelphia and Ohio Yearly Meetings, about their being cut off from the great body of the Society. But even supposing that the truth depended on the voice of a majority, time may determine very differently where that may be, from what many now so confidently assert. Notwithstanding the low state of the Society, which we have alluded to, there are preserved within the limits of all the Yearly Meetings, upright, consistent Friends, some of whom may not see exactly eye to eye in all things, but who are bowed under a sense of the present degenerate, dissevered state of the church, and whose prayers, we doubt not, are put up on its account; and we fully believe that as these keep low and humble, their cries will be heard, and in process of time, if they flinch not from performing their duty, they will see of the travail of their souls and be satisfied.

As such as these continue striving fervently to become more united to the blessed Head of the Church, and conformed to his meek, gentle, patient, loving Spirit, they will also be brought more in unity with each other, and bound together in one body, watching over each other for good, encouraging and strengthening each other in the work of regeneration, and in building up the waste places. Let all such take fresh courage, remembering that he that laboureth, receiveth wages, and gathereth fruit unto eternal life.

SUMMARY OF EVENTS.

EUROPE.—News from England to Sixth mo. 28th. Two letters from Lord Clarendon addressed to the American Minister, have been published—one on the enlistment question, and the other in relation to Central America. Lord Clarendon expresses satisfaction that Dallas had been instructed to negotiate the Central American question, and states that he is prepared to enter into a negotiation, which, he trusts, will be conducted in a spirit of cordiality and frankness, which is dictated by the true interests of Great Britain and the United States. The correspondence between Denmark, Great Britain and the United States, in relation to the Sound Dues, has been presented to Parliament. Another battalion of riflemen has been ordered to Canada. The Russian government is re-establishing the defences of Nicolaieff and Sebastopol. It is said they are to be made stronger than ever. The weather in England has been favourable for agricultural purposes.

Liverpool Markets.—The sales of cotton for the week had been 56,000 bales, at a small advance, and with a speculative demand. The stock, exclusive of that on shipboard, is 730,000 bales, including 610,000 American. The Bank of England has reduced the rate of interest to 4½ per cent. Consols were quoted at 95½ a 95¾ for account.

MEXICO.—Vera Cruz dates to the 8th, have been received. The Spanish fleet had set sail for Cuba. According to Mexican papers, the difficulties seem to be in the way of amicable settlement, the Spanish creditors having met and presented a project of settlement, which was deemed satisfactory. President Comonfort has decided in favour of the sale of all lands belonging to the church and other religious corporations. The new constitution and church property decree are much applauded. A new State is to be formed under the Constitution, called the "Valley of Mexico."

NICARAGUA.—The election for President of Nicaragua was held on the 24th ult., and it is said that Walker was elected by a large majority. His army now numbers 1800 men, including two companies of artillery. President Rivas, accompanied by the Secretary of State, Secretary of War, and Minister of Public Credit, fled to Leon, and took an opposing attitude to the Walker party. Gen. Walker issued a decree appointing Don Ferere Provisional President until the election, declaring all the acts of Rivas after his desertion void, and cautioning the citizens to refuse obedience to them, as all such would be considered as traitors to the country. Rivas and his cabinet were at Leon at the latest dates; all the American troops had left the place. He is charged with having invited the enemies of the country to invade Nicaragua.

UNITED STATES.—*Congress.*—The three bills which the President had vetoed, for the improvement of the Mississippi, the St. Mary's, and the St. Clair Rivers, have been passed by the required two-thirds vote in both Houses. The report of Oliver, of Missouri, from the minority of the Kansas Investigating Committee, arraigns the report of the majority as altogether *ex parte* and contends that many of its statements are without facts from the testimony to support them. He states that there was no evidence of any force or violence being used to prevent any man from voting in the Territory—no evidence assaling in the slightest degree the correctness of Gov. Reeder's judgment in awarding certificates of election to the members of the Legislature. That Legislature was a proper law-making body, and therefore its laws are valid as far as consistent with the Constitution of the United States, and the organic act; and Gen. Whitfield, being duly elected in pursuance of a law thus passed, was entitled to his seat. Oliver reviews at great length the existing troubles in Kansas, saying that from the evidence they are properly chargeable to the "abolitionists" who have got up their own Topeka Convention, and have pledged themselves to resist the laws at all hazards. The report of the Committee on the Sumner assault was fully discussed in the House of Representatives during several days last week. On the 14th, the substitute of the minority of the Committee, which declares that the House has no jurisdiction in the case, and therefore deems it improper to express any opinion on the subject, was voted on and rejected—yeas, 66; nays, 145. The House then voted on the resolution, declaring that Preston S. Brooks be and he is forthwith expelled from this House as a Representative from the State of South Caroline, which resulted as follows—yeas, 121; nays, 95. The resolution thus failed, a two-thirds vote being required for the expulsion of a member. Brooks, by permission of the House, then made a speech, in which he attempted to justify his conduct, and concluded by announcing his resignation, and that he was no longer a member of the thirty-fourth Congress, after which he withdrew amid hisses and applause.

California.—The steamship George Law, from Aspinwall, arrived at N. York, on the 14th inst., bringing the California mails to Sixth mo. 20th, and $1,705,301 in gold on freight. The health of the Isthmus was good, and the railroad in fine order. The only news of interest from San Francisco relates to the doings of the Vigilance Committee. That body being sustained by the popular sentiment, continued to set the constituted authorities of the State at defiance. The Governor's proclamation had been but feebly responded to. The State militia were encamped near San Francisco, and were said to number but a few hundred men. General Wool had refused to loan the Governor arms and ammunition, on the ground that he was not authorized to act in the premises, without an order from the President. The forces of the Committee consisted of 4000 infantry, 500 cavalry, and five companies of artillery, with 35 pieces of ordnance. A regular system of military discipline had been adopted. A number of persons had been tried by the Committee for frauds upon the ballot-boxes, and other offences of high grade, and banished from the State. Others were under arrest, charged with various crimes. The Committee take cognizance only of offences of the grade of *felony*. The Tribunals is composed of a series of three courts.—1st, of *Investigation*, 12 members; 2d, of *Debate*, 20 members; 3d, of *Final Disposition*, 90 members. The accused can only be convicted by a full two-thirds vote of the ninety judges. News had arrived from Oregon of an attack on Col. Wright's command at Natchez River, by the Yakima Indians, in which the commander was killed, and one-third of his force killed and wounded. Col. Wright's force numbered between 700 and 800 men.

Kansas.—Intelligence has been received from Topeka, Kansas, to the 4th inst. A convention met there on the 2d inst., and passed resolutions in favour of the Republican nominations, and denunciatory of the Democrats, and appealing to the friends of Free Kansas in Congress. There were about 800 present, all armed. Marshal Donaldson and Judge Elmore read the President's proclamation, also Governor Shannon's proclamation, and one issued by Woodson, Secretary of the Territory, together with a note from Col. Sumner, saying he would prevent the meeting of the Legislature. They were, however, unheeded. Both branches of th gislature met on the 4th. The same day Col. ner entered the town with 200 dragoons, and two cannon at the head of Kansas Avenue, whi troops were drawn up before Constitution Hall, the Legislature was assembled. Col. Sumner to citizens he would not disarm them, or break up the vention, but he had orders to dissolve the Legisl and would do so. He then proceeded to disper Legislature, to which the members yielded without sition. The Convention were preparing resolution dorsing the State Government and the Topeka C tution. The fear of invasion, it is stated, kept numbers from attending.

Philadelphia.—Mortality last week, 329. Cholera fantum caused 64 deaths: 208 of the deaths were o dren, under five years of age.

New York.—Mortality last week, 382. This city tinues unusually healthy for the season.

Miscellaneous.—*West India Sugar Crop.*—A letter Antigua, W. I., June 18th, states that the sugar season was nearly over, and the yield had been prolific. There had been sent to England and Ire fully 39,000 hogsheads, and 1400 hhds. molasses about the same quantity to the United States. health of the island was good.

The Late Floods in France.—The injury done t crops by the late inundations in France, is estimat one hundred and fifty millions of francs," of which millions is the referable to the mulberry trees fo worms. The above does not include the damage to houses, cattle, farm utensils or railroads.

The Jewish Disabilities Bill. which passed the Ho Commons, was rejected in the British House of on the 23d ult. by a vote of 110 to 78.

Imprisonment for Contempt.—Two wealthy women and Elizabeth Sherwood, of Sheffield, Eng., have liberated by the intervention of their friends, fr long imprisonment for contempt of the Court of Cha They continued in prison fourteen years rather produce an important document in their possession

More Camels for Texas.—The U. S. steamship Ste now lying at the Brooklyn Navy Yard, it is stated, be sent again in a few weeks for a reinforcement t stock of camels brought in by her on her last trip landed in Texas for the United States Government

Indiana Railroad.—Of the ninety-one counties i diana, the inhabitants of eighty can leave home morning, go to Indianapolis by railroad, attend to ness there from two to eight hours, and return hom same evening.

Health of Norfolk.—The city of Norfolk continu enjoy excellent health. During the past month number of deaths there was only 38, including 16 col persons. Nearly two-thirds of the whole number children under two years of age.

The Sumner Outrage. — The criminal proceed against Brooks for his assault upon Senator Sumner, brought to a close on the 9th inst. by the court imp upon him a fine of $300, upon the plea of guilty; testimony was given.

Ice at Niagara Falls.—On the 30th of Sixth mon large mass of ice remained below the American During the last winter the mass of ice formed b continual addition of spray is said to have been than 100 feet high.

The Deficiency in the French Budget in the last years, is 1200 millions of francs. Seventy-six mi were spent in useless public buildings, fifty mi were paid out of the public treasury to keep dow price of bread in Paris to prevent riots, and the I trial Exhibition cost eleven millions. The dinner Imperial christening cost two hundred thousand fr

WANTED.

A Suitable Female Teacher to take the place of cipal in the Select School for Girls, in this city.

"Knowledge is Power."

(Continued from page 358.)

ungo Park describes the wretched condition of
nhabitants of countries in Africa where small
cles of gold are found in the rivers. Their
were spent in hunting for the gold to exchange
seful commodities, instead of raising the com-
ties themselves; and they were consequently
and miserable, listless and unsteady. Their
industry had too much of chance mixed up
it to afford a certain and general profit. The
unts which of late years we have received from
old-diggings of California and Australia exhi-
he same suffering from the same cause. The
es of Cape de la Hogue, in Normandy, were
most wretched and ferocious people in all
nce, because they depended principally for sup-
on the wrecks that were frequent on their
ts. When there were no tempests, they made
asy transition from the character of wreckers
hat of robbers. A benefactor of his species
ht these unhappy people to collect the marine
ts, which exist abundantly upon their shores,
them, and dispose of the ashes for the manu-
ure of soda. They immediately became profit-
labourers and exchangers; they obtained a
erty in the general intelligence of civilized life;
capital of society raised them from misery to
lth, from being destroyers to being producers.
he Indians, as we thus see, were poor and
tched, because they had no appropriation be-
d articles of domestic use; because they had no
perty in land, and consequently no cultivation.
even they were not insensible to the import-
e of the principle, for the preservation of the
advantages that belonged to their course of
. Tanner says, "I have often known a hunter
ve his traps for many days in the woods, with-
visiting them, or feeling any anxiety about
ir safety." The Indians even carried the prin-
le of appropriation almost to a division of land;
each tribe, and sometimes each individual, had
allotted hunting-ground—imperfectly appro-
ated, indeed, by the first comer, and often con-
ted with violence by other hunters, but still
owing that they approached the limit which
ides the savage from the civilized state, and
t, if cultivation were introduced among them,
re would be a division of land, as a matter of
cessity. The security of individual property is
foundation of all social improvement. It is im-
ssible to speak of the productive power of labour
the civilized state, without viewing it in connec-
tion with that great principle of society which considers all capital as appropriated.

At the commencement of the present century, all the Indian tribes who were abiding in the territory of the United States east of the Mississippi, were in the condition which has been described by Tanner. The want of resources in the country of the Indians is always so manifest, that whenever the United States government through its agent or commissioners, assemble together any considerable number of Indians for the negotiation of treaties, or other purposes, it is absolutely necessary to provide for their support and subsistence during the continuance of the council, by transporting provisions from the nearest civilized district. So improvident are these people, and so neglectful of the resources of the country they inhabit, that unless this course was adopted by the National Government, the council would be broken up, through impending starvation. The Indians formerly inhabiting the territory now occupied by the great Northwestern States, have now vanished from their old hunting-grounds. Where they so recently maintained a precarious existence, there are populous cities, navigable rivers, roads, railways. The clink of the hammer is heard in the forge, and the rush of the stream from the mill-dam tells of agriculture and commerce. But even the Indians themselves have become labourers. A number of the tribes have been removed to a large tract of country, west of the Mississippi, and have been raised into the dignity of cultivators. The Cherokees, the Creeks, and the Choctaws, with many smaller tribes, now breed cattle instead of hunting martens. They have houses in the place of huts; they have schools and churches. Instead of being extirpated by famine or the sword, they have been adopted into the great family of civilized man.

But this wise and humane arrangement of the United States has not wholly removed the Indians from the wide regions of North America. In the remote interior and in the Hudson's Bay territories the life which Tanner described still goes forward. The wants of civilized society—the desire to possess the earth—have transported the Indians from the banks of the Ohio to the lands watered by the Arkansas. The opposite principle has retained them on the shores of Hudson's Bay. They are wanted there as hunters, and are not encouraged as cultivators. They are kept out of the pale of civilization, and are not received within it. The rude industry of the Hudson's Bay Indians is stimulated by the luxury of Europe into an employ which would cease to exist if the people became civilized. If agriculture were introduced among them—if they were to grow corn and keep domestic animals—they would cease to be hunters of foxes and martens, because their wants would be much better supplied by other modes of labour, involving less suffering and less uncertainty. As it is, the traders who want skins do not think of giving the Indians tools to work the ground and seeds to put in it, and cows and sheep to breed other cows and sheep. They avail themselves of the uncivilized state of these poor tribes, to render them the principal agents in the manufacture of fur, to supply the luxuries of another hemisphere. But still the exchange which the hunters carry on with the European traders, imperfect as it is in all cases, and unjust as it is in many, is better for the Indians than no exchange; although we fear that ardent spirits take away from the Indians the greater number of the advantages which would otherwise remain with them as exchangers. If the Indians had no skins to give to Europe, Europe would have no blankets and ammunition to give to them. They would obtain their food and clothing by the use of the bow alone. They would live entirely from hand to mouth. They would have no motive for accumulation, because there would be no exchanges; and they would consequently be even poorer and more helpless than they are now as exchangers of skins. They are suffering from the effects of small accumulations and imperfect exchange; but these are far better than no accumulation and no exchange. If the course of their industry were to be changed by perfect appropriation—if they were consequently to become cultivators and manufacturers, instead of wanderers in the woods to hunt for wild and noxious animals—they would, in the course of years, have abundance of profitable labour, because they would have abundance of capital. This is the better lot of many of the tribes with whom the government of the United States has made a far nobler treaty than Penn made with his Indians. As it is, their accumulations are so small, that they cannot proceed with their own uncertain labour of hunting without an advance of capital on the part of the traders; and thus, even in the rude tradings of these poor Indians, credit, that complicated instrument of commercial exchange, operates upon the direction of their labour. Of course credit would not exist at all without appropriation. Their rights of property are perfect as far as they go; but they are not carried far enough to direct their labour into channels which would insure sufficient production for the labourers. Their labour is unproductive because they have small accumulations; —their accumulations are small because they have imperfect exchange;—their exchange is imperfect because they have limited appropriation. We may illustrate this state of imperfect production by another passage from Tanner's story:

"The Hudson's Bay Company had now no post in that part of the country, and the Indians were soon made conscious of the advantage which had formerly resulted to them from the competition between rival trading companies. Mr. Wells, at the commencement of winter, called us all together, gave the Indians a ten-gallon keg of rum and some tobacco, telling them at the same time he would not credit one of them the value of a single needle. When they brought skins he would buy them, and give in exchange such articles as were necessary for their comfort and subsistence during the winter. I was not with the Indians when this talk was held. When it was reported to me, and a share of the presents offered me, I not only refused to accept anything, but reproached the Indians for their pusillanimity in submitting to such terms. They had been accustomed for many years to receive credits in the fall; they were now entirely destitute not of clothing merely, but of ammunition, and

many of them of guns and traps. How were they, without the accustomed aid from the traders, to subsist themselves and their families during the ensuing winter? A few days afterward I went to Mr. Wells, and told him that I was poor, with a large family to support by my own exertions; and that I must unavoidably suffer, and perhaps perish, unless he would give me such a credit as I had always in the fall been accustomed to receive. He would not listen to my representation, and told me roughly to be gone from his house. I then took eight silver beavers, such as are worn by the women as ornaments on their dress, and which I had purchased the year before at just twice the price that was commonly given for a capote;* I laid them before him on the table, and asked him to give me a capote for them, or retain them as a pledge for the payment of the price of the garment, as soon as I could procure the peltries.† He took up the ornaments, threw them in my face, and told me never to come inside of his house again. The cold weather of the winter had not yet set in, and I went immediately to my hunting-ground, killed a number of moose, and set my wife to make the skins into such garments as were best adapted to the winter season, and which I now saw we should be compelled to substitute for the blankets and woolen clothes we had been accustomed to receive from the traders."

This incident at once shows us that the great blessing of the civilized state is its increase of the powers of production. Here we see the Indians, surrounded on all sides by wild animals whose skins might be made into garments, reduced to the extremity of distress because the traders refused to advance them blankets and other necessaries, to be used during the months when they were employed in catching the animals from which they might obtain the skins. It is easy to see that the Indians were a long way removed from the power of making blankets themselves. Before they could reach this point, their forests must have been converted into pasture-grounds; they must have raised flocks of sheep, and learned all the various complicated arts, and possessed all the ingenious machinery, for converting wool into cloth. By their exchange of furs for blankets, they obtained a share in the productiveness of civilization; they obtained comfortable clothing with much less labour than they could have made it out of the furs. If Tanner had not considered the capote which he desired to obtain from the traders, better, and less costly, than the garment of moose-skins, he would not have carried on any exchange of the two articles with the traders. The skins of martens and foxes were only valuable to the Indians, without exchange, for the purpose of sewing together to make covering. They had a different value in Europe as articles of luxury; and therefore the Indians by exchange obtained a greater plenty of superior clothing than if they had used the skins themselves. But the very nature of the trade, depending upon chance supplies, rendered it impossible that they should accumulate. They had such pressing need of ammunition, traps, and blankets, that the produce of the labour of one hunting season was not more than sufficient to procure the commodities which they required to consume in the same season. But supposing the Indians could have bred foxes and martens and beavers, as we breed rabbits, for the supply of the European demand for fur, doubtless they would have then advanced many steps in the character of producers. The thing is perhaps impossible; but were it possible, and were the Indians to have practised it, they would immediately have become capitalists, to an extent that would have soon rendered them independent of the credit of the traders. They must, however, have previously established a more perfect appropriation. Each must have inclosed his own hunting-ground; and each must have raised some food for the maintenance of his own stock of beavers, foxes, and martens. It would be easier, doubtless, to raise the food for themselves, and ultimately to exchange corn for clothing, instead of furs for clothing. When this happens—and it will happen sooner or later, unless the remnant of the hunting Indians are extirpated by their poverty, which proceeds from their imperfect production—Europe must go without the brilliant variety of skins which are procured at the cost of so much labour, accompanied with so much wretchedness, because the labour is so unproductive to the labourers. When the ladies of Europe and the United States are compelled to wear capes of rabbits' fur instead of sables, and when the hair of the beaver ceases to be employed in the manufacture of our hats, the wooded regions of Hudson's Bay will have been cleared—the fur-bearing animals will have perished—corn will be growing in the forest and the marsh—the inhabitants will be building houses instead of trapping foxes;—there will be appropriation and capital, profitable labour and comfort. Three hundred thousand mink and and marten-skins will no longer be sent from those shores to England in one year; but England may send to those shores woven cottons and worsteds, pottery and tools, in exchange for products whose cultivation will have exterminated the minks and martens.

(To be continued.)

* A sort of great-coat. † Skins.

Epistle of George Fox.

There was about this time an order for the trying of ministers (so called) and for approving or ejecting them out of their places or benefices; whereupon I wrote a paper to the justices and other commissioners, who were appointed to that work, as follows:—

Friends,—You that are justices and in commission to try ministers, who have so long been in the vineyard of God, see whether they be such as are mentioned in the Scriptures, whom the prophets, Christ, and the apostles disapproved of. And if they be such as they disapproved, see how ye can stand approved in the sight of God, to let such go into his vineyard, and approve of them who will admire your persons, because of advantage, and if you do not give them advantage, they will not admire your persons. Such Jude speaks of. See if they be not such as teach for filthy lucre, for the love of money, covetous, such as love themselves, who have a form of godliness, but deny the power; from such the apostles bid to "turn away." The apostle said, their mouths should be stopped, who served not the Lord Jesus, but their own bellies, being evil, who mind earthly things. Paul gave Timothy a description to try ministers by; he said, "they must not be covetous, nor given to wine, nor filthy lucre, nor novices; lest being lifted up into pride, they fall into the condemnation of the devil;" these he was to try and prove without partiality. Now take heed of approving such as he disapproved; for since the apostle's days, such as he disapproved have had their liberty; and they have told us, the tongues were their original, and that they were orthodox men, and that the steeple-house with a cross on the top of it, was the church, (the Papist's mass-house; you may look on the top of it, and see the sign.) But the Scriptures tell us, "all the earth was of one language before the building of Babel;" and when Pilate crucified Christ, he set the tongues, Hebrew, Greek, and Latin, over his head. And John tells us, that the beast power over the tongues, kindred, and nations that the whore sits upon the tongues; of whos all nations have drunk, and the kings of the have committed fornication with her. Joh said, the tongues are waters. Christ gives t to his disciples, and to the multitude, how t such as these that you are to try. They are of men masters; they love the chiefest seat assemblies; they are sayers, but not doers; said he, they shall put you out of the synago Seven woes he denounced against them, and s approved them. Christ said, false prophets sh come; and John saw they were come; for went forth from them, and the world since gone after them. But Babylon must be founded, the mother of harlots; and the devil be taken; and with him the beast and the prophet must be cast into the lake of fire; fo Lamb and his saints over all must reign, and the victory. The Lord God sent his prophe old, to cry against the shepherds, that sough the fleece, Ezek. xxxiv., and to cry against shepherds as seek for their gain from their qu and never have enough, Isa. v. 6; and to against the prophets that prophesied falsely the priests that bore rule by their means; was the filthy and horrible thing, Jer. v. A you would forbear to give them means, you w see how long they would bear rule. There w old time a storehouse for the fatherless, stran and widows to come to and be filled; and they not prosper them who did not bring their tith the storehouse. But, did not Christ put an en that priesthood, tithes, temple, and priests? doth not the apostle say, that the priesthoo changed, the law is changed, and the comm ment disannulled? Might not they have ple the law of God, that gave them tithes? Have any of the priests prospered that take tithes s by the law of man? Was not the first auth them, since Christ's time, the Pope, or some o church? Did the apostles cast men into priso tithes as your ministers do now? As insta Ralph Hollingsworth, priest of Phillingham petty tithes not exceeding six shillings, has cast Lincoln prison a poor thatcher, named The Bromby, where he has been about eight-and-t weeks, and still remains a prisoner. And priest petitioned the judge that the poor man m not labour in the city, to get a little money to his maintenance in prison. Is this a good sa amongst you, that are in commission to el ministers? Is this glad tidings, to cast into pr a man that is not his hearer, because he coul put into his mouth? Can such as are in the of God, and in his wisdom, own such things. ministers of Christ are to plant a vineyard, then eat of the fruit; to plough, sow and th and get the corn; and then let them reap; bu cast them into prison, for whom they do no v Christ, when he sent forth his ministers, bid give freely, as they had received freely; and what city or town soever they came, inquire were worthy, and there abide; and what the before you, said he, that eat. And when they back again to Christ, and he asked them if wanted anything, they said, No. They did n to a town, and call the people together, to how much they might have by the year, as that are in the apostacy do now. The apostle "have I not power to eat and to drink?" he did not say, to take tithes, Easter-reckon Midsummer dues, augmentations, and great sum money; but "have I not power to eat an drink?" Yet he did not use that power among Corinthians. But they that are apostatized

ill take tithes, great sums of money, Easter- ngs, and Midsummer dues; and cast them ison, that will not give it them, whom they work for. The ox's mouth must not be d, that treads out the corn; but see if the e trodden out in you, and the wheat be in ner. This is from a lover of your souls, and at desires your eternal good.

G. F.

Use of Bones as a Manure.

use of bones as a manure is of great anti- Within the last eighty years the use of and bone-dust as a manure, has become geneoughout Great Britain, and the present fertile on of that country is, in a great measure, their use. Some authors estimate that $10,- 00 of bones are annually imported into that y, principally to be used as manure. They tained in the ports of Europe, Russia, Ger- South America, and the United States. the bone-dust of Germany had been fully and proofs of its efficacy were fully estab- a proverb arose that "one ton of German lust saves the importation of ten tons of Ger- orn." Throughout Great Britain bones are ed from every possible source of supply, and arkets of the world have been ransacked to the demand created for them by the strong tion of their value which experience has im- d upon the mind of British farmers. Even nes of battle fields have been collected and or this purpose, and the last mortal remains soldiers who fell at Waterloo, have been o enrich the soil of England. It is common ert in English leases of land a provision re- g the tenant to manure the soil with bone- nt regular intervals.

ne manure has been applied, with great suc- as a top dressing for grass lands. In this case st be sown by the hand, broadcast, and ap- in the state of powder, if the land is soon to bjected to the scythe. In England, the end Fourth month is considered the best time to ap- nes for this purpose. Those experienced in use say that, by manuring with bone-dust once ht years, the land produces as good hay as if red with farm-yard dung every two years. in eight or nine years is considered often h to manure many lands with bones.

ne manure has also been variously applied great success as a preparation for wheat and tillage crops. When spread broadcast it is times harrowed in with the last ploughing or im- ately previous to the sowing, and sometimes ed to lie for a while upon the surface of the d. It seems to act best, however, when drill- the soil.

bushel of bone-dust weighs fifty-four pounds. amount applied varies from 10 to 25 or even 50 bushels per acre, according to the crop it ed for, and the permanency of the effects de- from its assistance. To soils of an open tex- bone-dust should be applied only in accom- ment with farm-yard manure, the latter being spread, and then the bone-dust sown over it e covering it with the plough. This accom- ment is peculiarly suitable for dry seasons. A proportion is from eight to ten bushels of bone- and ten tons of farm-yard manure. It is also mon to mix all the ingredients of the farm-yard a compost, using about twelve bushels of bones ght tons of the farm-yard manure.

frequent and usually advantageous method for of a less light and open kind, is to work barn- manure into a compost or mixture with ashes, s, clays, or decayed vegetable matter, according to the particular character of individual soils— with clay, for sandy soils; with ashes for clayey soils, and with loam or decayed vegetables for soils of medium porosity. Some farmers give to each acre a compost of fifty bushels of bone-dust, and five loads of burnt clay or of good earth, and by applying it broadcast and ploughing in, have found it to increase twenty per cent. all the crops of a rotation except clover. The best method of applying it to meadows or old pasture is such a combination of bone-dust, urine and earth, that eight or ten bushels of bone-dust shall be given to each acre. Liebig says 40 pounds bone-dust and 20 pounds sulphuric acid will produce a good crop of turnips.

Bone-dust is not equally effective upon all sorts of soils. On light soils, on sandy soils, the warmer loams, and on limestone soils, its effect is very great, while on wet lands, whether clays, damp loams, or moist grounds, the results are generally considered less favourable. Bones are an invaluable acquisition in every country where they can be procured. In England their use has improved many a barren tract of land which might otherwise have remained unavailable.

The Deaths of Aaron and Moses.

The following is from a chapter entitled "The Mountain Glory," in "Modern Painters," an English work by Ruskin, just published.

"Try to realize that going forth of Aaron from the midst of the congregation. He who had so often done sacrifice for their sin going forth now to offer up his own spirit. He who had stood among them, between the dead and the living, and had seen the eyes of all that great multitude turned to him, that by his intercession their breath might yet be drawn a moment more, going forth now to meet the angel of death face to face, and deliver himself into his hand. Try if you cannot walk, in thought, with those two brothers, and the son, as they passed the outmost tents of Israel, and turned, while yet the dew lay round about the camp, toward the slopes of Mount Hor; talking together for the last time, as step by step, they felt the steeper rising of the rocks, and hour after hour, beneath the ascending sun, the horizon grew broader as they climbed, and all the folded hills of Idumea, one by one subdued, showed amidst their hollows in the haze of noon, the windings of that long desert journey, now at last to close. But who shall enter into the thoughts of the High Priest, as his eye followed those paths of ancient pilgrimage; and, through the silence of the arid and endless hills, stretching even to the dim peak of Sinai, the whole history of those forty years was unfolded before him, and the mystery of his own ministries revealed to him; and that other Holy of Holies, of which the mountain peaks were the altars, and the mountain clouds the veil, the firmament of his father's dwelling opened to him still more brightly and infinitely as he drew nearer his death; until at last, on the shadeless summit—from him on whom sin was to be laid no more—from him on whose heart the names of sinful nations were to press their graven fire no longer—the brother and the son took breast-plate and ephod, and left him to his rest.

"There is, indeed, a sacredness in this calm faith and deep restraint of sorrow, into which it is difficult for us to enter; but the death of Moses himself is more easily to be conceived, and had in it circumstances still more touching, as far as regards the influence of the external scene. For forty years Moses had not been alone. The care and burden of all the people, the weight of their woe, and guilt, and death, had been upon him continually. And now, at last, the command came, "Get thee up into this mountain." The weary hands that had been so long stayed up against the enemies of Israel, might lean again upon the shepherd's staff, and fold themselves for the shepherd's prayer—for the shepherd's slumber. Not strange to his feet, though forty years unknown, the roughness of the bare mountain path, as he climbed from ledge to ledge of Abarim; not strange to his aged eyes the scattered clusters of the mountain herbage, and the broken shadows of the cliffs, indented far across the silence of uninhabited ravines; scenes such as those among which, with none, as now, beside him but God, he had led his flocks so often; and which he had left how painfully! taking upon him the appointed power, to make of the fenced city a wilderness, and to fill the desert with songs of deliverance.

"It was not to embitter the last hours of his life that God restored to him for a day the beloved solitudes he had lost; and breathed the peace of the perpetual hills around him, and cast the world in which he had laboured and sinned far beneath his feet, in that mist of dying blue—all sin, all wandering, soon to be forgotten forever; the Dead Sea—a type of God's anger understood by him, of all men, most clearly, who had seen the earth open her mouth, and the sea his depth, to overwhelm the companies of those who contended with his Master—laid waveless beneath him; and beyond it, the fair hills of Judah, and the soft plains and banks of Jordan, purple in the evening light as with the blood of redemption, and fading in their distant fulness into mysteries of promise and of love. There, with his unabated strength, his undimmed glance, lying down upon the utmost rocks, with angels waiting near to contend for the spoils of his spirit, he put off his earthly armour. We do deep reverence to his companion prophet, for whom the chariot of fire came down from heaven; but was his death less noble, whom his Lord himself buried in the vales of Moab, keeping, in the secrets of the Eternal counsels, the knowledge of a sepulchre, to be called, in the fulness of time, to talk with that Lord, upon Hermon, of the death that He should accomplish at Jerusalem."

For "The Friend."

Testimony to Plainness.

Training the children of Friends in plainness of speech, behaviour, and apparel is of great importance to them. The religious deportment, and the spirit of parents giving evidence that their course of education is conscientiously founded upon the requirings of the Spirit of Truth, makes a correspondent impression upon the young and tender mind, as it is administered in love, as well as with proper firmness. It is often a trial to children to be dressed in a simple way, so as to distinguish them from the gay and luxurious world; and sometimes they have to endure a share of persecution on account of it and the use of the plain language. Yet it is not only a means of their preservation out of many evils, but it induces the habit of self-denial and self-control, and finally they feel bound to it upon religious principle. If Yearly Meetings should decide, that parents are under no necessity any longer to control their children in this respect, but that it will be equally acceptable to the gathered church, to see its members arrayed in the varying fashions that are to be found in mystery Babylon, and addressing one another in the complimentary style of the world, and that this will form no bar to their spiritual usefulness, we may expect that those who are fools for Christ's sake, and cannot deck themselves or their offspring, will be subjected to the pointings of the finger of scorn, and the dear children to pass through a furnace of persecution, as our Friends did in their labours and their faithfulness, to revive the primitive apostolic testimony against the corrupt

adornings, which nominal professors indulge in. As it looks probable many will be drawn away, so as to hold in contempt the simple garb and language of Friends, religiously concerned parents and others have need to look at the ground of this christian testimony in themselves, and in their honest efforts to bring up the lambs committed to their charge, according to the directions of the Shepherd of the sheep, to take care that their restraints are applied in true love to them, convincing them that they act from conscientious motives, in the discharge of what they are bound to believe is their religious duty, and for their preservation out of the evils that abound in the world—that being led in the footsteps of Christ's flock, they may bring forth fruit to the Lord's praise—and their growth in his Grace. We believe, where this course is pursued in the fear of the Lord, attended with a solid, consistent deportment in the parents, and the proper means of instruction in our religious principles, pressing upon them daily obedience to the intimations of the Holy Spirit in their hearts, children grown to maturity under such exercised and faithful parents and caretakers, will scarcely ever depart from it. The religion of their education becomes their religion by conviction, under the teaching and guidance of the Truth, and they are made thankful for the prayers, the watchfulness, and the judicious restraints of beloved, upright parents.

All the members who feel the exceeding sinfulness of sin, and in whom ardent desires are produced to be enabled to forsake it, when they take the yoke of Christ upon them, if they have lived in the world's fashions and language, become impelled to lay off their Babylonish dress and manners, and to put on the simple clothing of a Quaker. They are convinced that it is their duty, and without complying with this persuasion, they cannot witness a growth in the work of salvation. If regenerated men and women, whether members, or applying to be admitted into the society, are led to change their dress and language, by the same power which laid the cross upon them in other things, on what ground can individuals or meetings dispense with this christian testimony? Can there be any other motive, than to escape the cross and the mortification of the narrow way that leads to life, and join the multitude that go in at the wide gate, and traverse the broad way? We know that a plain dress and plain language will not of themselves merely, make us way faring men in the narrow way, but we also know, that the living members of the Church of Christ in our religious Society, have always felt bound to confess their Saviour, in the humble, plain appearance which it assumed in the beginning; and where members take upon them to be active in the visible church with marks of departure in this respect upon them, the savour of divine life will be wanting—like the flies in the ointment of the apothecary, it will send forth an ill savour, and will not convey evidence of the authority of Truth accompanying the works of such. The arch enemy is now powerfully working in various ways, to lay waste our Religious Society, and the blow at our plain way of living, dressing and speaking, is among the most captivating and effectual, as it directly appeals to the carnal desires of young people, and falls in with the pride, the weaknesses, and the worldly desires of those parents who are little better than half Jew and half Ashdod. But we believe there is a body of concerned Friends distributed in all the Yearly Meetings, who are led to mourn over the degeneracy which is overspreading hundreds of the members; and if they dwell with the suffering Seed, being faithful in all things to the leadings of the Holy Spirit, they will be kept in the Truth, and will be as salt to others round about them. The more these look to the Lord for their support and guidance, and rely on him for the defence of the Society, and the cause of Christ which he called it to advocate, the more they will see from time to time his power defeating the stratagems of Satan, and gradually making a way to exalt his great name, and deliver his oppressed people from the bondage which unfaithful members have brought the Society into.

We have the testimony of John Conran, a minister who lived and died in Ireland, confirming these sentiments on dress and language. He says: "The same divine principle [of light and life] which led me out of the forms and ceremonies, to worship the Father in spirit and in truth, also led me by its secret teachings into a straight and narrow way, as to all superfluities in dress and address; and knowing in whom I had believed, *the same hath preserved me in it to this day*, and *I trust will do so to the end, as there is no variableness with Him*. Simplicity of dress and address is becoming an humble follower of a crucified Saviour. There is a cross to many among us in these things, as the practice of them declares to beholders whose disciples we profess to be; and although all power in heaven and in earth is given unto Him, yet because the world in their foolish, vain hearts despise the wisdom of God in these things, intended to crucify us to the spirit of the world, and the pomps and vanities of it, *they are ashamed of the cross*, and would rather enjoy the pleasures of a sinful world, which are only for a season, than to suffer affliction with the people of God in the scoffings of the world.

"Although I knew that [the Quakers] held these testimonies, and that they were outward marks of union with them, nevertheless I was desirous to know the ground of them in myself, and not to take up anything in which such great salvation is concerned, but from a clear conviction that it was from the living foundation God hath laid in my heart. The practice and use of the plain language is consonant with the rules of grammar, and the language of holy men of old, as the Scriptures bear testimony; yet I was desirous to prove all things, to bring them to the standard of truth in my heart, and if they stood the measure of that, to cleave to them. I began to use this language sometimes, and at other times not, when in my infancy. My near kinsfolk, I heard, said, I was beside myself, therefore it was a cross to use it in their presence; but denying the cross brought sorrow and weakness along with it, and a fear that if I went down the steps of Jacob's ladder, I should find it more difficult to recover the ground I had lost than even to ascend to another step. The prospect of a glorious crown of righteousness that was set before me as attainable through faithfulness, encouraged me to press forward; as I endeavoured to do so, I grew stronger, the yoke became easier, the burden light; and when through inadvertance an omission occurred, *for afterwards I never dared wilfully to transgress*, I always felt wounded in my spirit.

"The change in my dress was a great cross, as I was always given to fashionable dresses, and at this time had sundry suits of apparel of this sort. I felt a solemn covering to come over my spirit early one morning whilst in bed, which drew me into deep silence and attention, when *I felt it required of me to conform to the simple appearance of Christ's followers:* His garment was all of a piece, so ought mine to be, of a piece with my speech, my life and conversation. This felt to me a severe stroke; no shelter was now left for me, but I must appear as a fool to the world; my speech and then my garments would betray me that I had been with Christ, and professed myself to be one of his disciples. I wept bitterly, and plea the cross it would be to me before my friends acquaintance, with the loss it would be to me my present clothes. But all was silence to complaints, and the leaven worked in the lump the whole man was leavened into submission, then I ran the way of his commandments with and alacrity of heart, so much so that I have be in passing some people say, they would give t oath I was a Quaker. Oh! saith my spirit, *all the family were so conspicuous, even to outside*, that they might be known thereby wh they are!"

This Friend died in 1827, in the eighty-eig year of his age, and appeared to have held hi tegrity to the end. From the services in which was engaged with substantial ministers, and od in the course of his life, and the correspond which he had with them, he was no doubt grown in the Truth, and beloved and honoured by genuine Quakers of his time. No intimation given that he or his true Friends ever had any sire to depart from the testimony, which the S ety from its rise has maintained to the import and obligation to keep to plainness of speech, haviour and apparel. Those who wish such cha belong to a class, which judges by the world's sta ard, not the Spirit of our crucified, but r Lord.

Selecte

A PSALM OF THE NIGHT.

Fades from the West the farewell light,
Flung backward by the setting sun,
And silence deepens as the night
Steals with its solemn shadows on!
Gathers the soft, refreshing dew,
On springing grass and flow'ret stems—
And lo! the everlasting blue
Is radiant with a thousand gems.

Ye visible spirits! bright as erst
Young Eden's birthnight saw ye shine
On all her flowers and fountains first,
Yet sparkling from the hand divine;
Yes, bright as when, ye smiled to catch
The music of a sphere as fair,
Ye hold your high, immortal watch,
And gird your God's pavilion there.

Source of all life, and joy, and light!
Creator of each starry sphere,
That o'er me on the arch of night
Gleams like a diamond bright and clear;
Oh, as I gaze, transported now,
Upon this blue resplendent dome,
Deign but to hear my prayer, that Thou
Wilt call my erring spirit home!

Home, from the world's fast fading bowers,
Frail visions and deluding dreams,
To that fair clime of Eden flowers,
Sweet airs, and softly gliding streams;
Oh, make me feel that while I stay,
A sojourner and stranger here,
My soul must seek its homeward way,
Far, far beyond each starry sphere.

I kneel before thy gorgeous throne,
Upon thy footstool, king of kings;
And gazing on the glories shown
Beneath the Holy Spirit's wings—
Abject and weak, my awe-struck heart
Would from thy dreadful presence flee,
If Saviour, Thou didst not impart
Rays of undying hope to me.

As yonder faint and glimmering star
Receives its lustre from the sun,
Though from its fiery splendors far,
So from thy love, Almighty One,
My spirit drinks immortal light—
Oh, never may that light decay,
But, like yon diamond of the night,
In Heaven's own beauty melt away.

For "The Friend."

BIOGRAPHICAL SKETCHES,

...ters and Elders, and other concerned mem...s of the Yearly Meeting of Philadelphia.

(Continued from page 357.)

RICHARD HANCOCK.

...ard Hancock, of Alloways Creek, West ... Surveyor-General of that Province, under ..., was a man of note in civil as well as reli... society. His natural abilities and position ...community gave him influence therein, and ...ful dedication to the cause of Truth, and ...with in heavenly wisdom, gave him an im... place in the militant church. It is said of ...at he was an elder, to the duties of which "he faithfully attended, and gave up much ...time to the service of Truth." He was "a ...man, of a loving temper, remarkably just in ...alings. It may be said he was one that ...nd feared the Lord, and hated covetousness, ... example in his day, and hath left a good ...behind him." His death took place in the ...month, 1733.

WILLIAM PAXSON.

...liam Paxson, of Middletown, Bucks county, ... useful member of civil society. For many ...he served in the Assembly of the Province with ...tion. He was dedicated to the Truth, faith... the discharge of his religious duties, and to... the close of his life stood in the station of ...

In general esteem for wisdom and virtue, ...sed his useful life on the 18th of the Tenth ..., 1733.

JOSEPH ELGAR.

...seph Elgar, son of John Elgar, was born at ...stone in Kent, Old England, on the 30th of ...fourth month, 1690. His parents were mem... of our religious Society, and Joseph was ...ght up in the attendance of our meetings, and ...icted to wait on the Lord for daily spiritual ...shment. The blessing of pious parental train...was not lost upon him, but through his faithful... produced fruits of increase.

...portly after arriving at maturity, he married ...garet ——. Feeling drawn to America, about ...eginning of the year 1720, he with his wife ...family removed to Pennsylvania, and settled ...hiladelphia. In 1721 he removed to Oxford, ...Philadelphia county, where he remained until ...5, when he returned to the city. About this ... a gift in the ministry was conferred upon him, ...h he exercised in meekness and fear, to the ...fort and edification of the body. He was em...ed in visiting families, but from the records ...s not appear, whilst a member of Philadelphia ...eting, to have visited the churches abroad.

...n the year 1729, he removed with his family to ...tingham, where he abode the remainder of his ...

He was now much called from home on gos... service. He visited the meetings throughout ...nsylvania, New Jersey and Maryland generally, ...l was at times engaged in visiting families, for ...ich service he was well qualified. His friends ..., "He was a good example in attending meet...s, and careful in keeping to the hour appointed. ...ough a faithful labourer therein, he was not for...rd to appear [in ministry], yet was lively and ...ifying." "He was industrious in outward affairs, ...t cheerfully given up to answer the drawings of ...uth."

His last religious service from home was in visit...g the families of Bush River and Deer Creek, ...out the Ninth month, 1733. On his return home, ...told a friend, supposed to be John Churchman, who accompanied him in the visit, "that there was an unusual weight over his spirit, and a cloud that he could not see beyond, which made him think that his day's work was nearly over." The night he reached his own residence, he was taken ill, and suffered much pain, which he bore with exemplary patience. After a few days there was a change in his disease, but it was not for the better, and he failed fast. He was sensible that his end was drawing near, and said, "I have done with the world." He expressed his willingness to depart, having the assurance that "he had been faithful to what was made known to him, since he gave up to the requirings of Truth." He lay in a sweet composure of mind, and was sensible until a few minutes before his departure. His death took place, Eleventh month 19th, 1733. He was buried in Friends' burial ground at East Nottingham, at which time a solemn meeting was held to the comfort of many, that worthy Friend and minister, Mongo Bewley, from Ireland, being present and exercised in his gift.

MARTHA COGGESHALL.

Martha Sankee was born in England, about 1660, or a few years after. She was there convinced of the Truth, and brought a certificate of membership amongst Friends to Philadelphia, where she settled about 1683. In the Tenth month, 1684, she was married to Daniel Medlicott, a Friend, residing within the limits of Haverford Monthly Meeting. Here her first years of married life were passed, and happy as a wife and mother, in domestic employments her days glided by. But her master had need of her, and doubtless seeing that earthly comforts were too tightly binding her, he sent afflictions to set her free for his service. In the year 1693, she lost her beloved husband, and in 1695 a daughter. In this stripped and bereaved condition, she evidently was under the preparing hand for usefulness, and she soon was introduced into service in the church.

In the year 1698, she was married to James Kite, of Blockley, a widower with several children. To these she proved an affectionate mother, and there is evidence remaining to show that true love and kindness subsisted between them. In further preparation for usefulness, her heavenly Father saw meet about the close of 1712, again to make her a widow. In the year 1715, she once more entered the married life. Her last husband was Jonathan Coggeshall, or Cockshaw, a valuable Friend, who in 1698 removed from Worley, near Halifax, in Yorkshire, England, and settled west of the Schuylkill. He was sometimes a member of Darby Monthly Meeting, and sometimes of Haverford, and was evidently esteemed in both. About the time of his marriage, he removed to Philadelphia, where he resided during the lifetime of his wife.

Martha Coggeshall was soon after called to the work of the ministry, and the records of her faithfulness in attending meetings, and in the exercise of her gift are many. She filled up with reputation a very enlarged sphere of service in religious society—many appointments being placed on her. Philadelphia Monthly Meeting says of her ministry: "Her testimony being accompanied with a good degree of gospel love and simplicity, was well accepted, and her life and conversation being answerable thereto, she was much esteemed and beloved among us."

Her decease took place, Second mo. 4th, 1734.

ELIZABETH WHARTNABY.

Of the early life of Elizabeth Whartnaby, we can find no record. In the year 1712, when she felt a concern to remove to Philadelphia, she was a resident of London, a woman of religious experience, and an acceptable minister of the gospel. She reached Philadelphia early in the Third month, 1713, presenting a certificate of membership to the Monthly Meeting held towards the close of that month. She had presented a certificate from the Meeting of Ministers, held in London, expressing their unity with her in her gospel labours, to the Seventh-day Meeting of Philadelphia, held the 9th of that month, which was "read and well received."

At the Monthly Meeting, held Twelfth mo. 24th, 1715, she opened a concern to visit friends on Long Island, Rhode Island and adjacent parts. Who accompanied her on this visit, we know not, nor how long it occupied her. The latter half of the year 1717 she was engaged in visiting Friends to the south, producing on her return certificates of unity with her services. In the Ninth and Tenth months, 1718, she received the approbation of various meetings of her Friends to accompany Rebecca Turner, a Friend from England, and then visiting Friends in America. This was an extensive engagement, and occupied nearly a year. In the winter they went to Barbadoes, where they had good service, and passed from thence to New England, in the spring of 1719. They were on Nantucket in the Fifth month, the Friends of which place certify of Elizabeth, "that her service and labour of love in the work of the ministry, has been very acceptable to us." The Friends of their Monthly Meeting at Portsmouth, Sixth month 25th, say: "The bearer hereof, our friend and sister Elizabeth Whartnaby, hath visited most of the meetings of Friends in New England, and her service in the ministry hath been very serviceable, acceptable and comfortable to us, being accompanied with an innocent conversation." They also state that their prayers are for her safe return to her home, and that "the peace of our Lord Jesus may be her companion." Passing on to Long Island, they visited Friends there, who say that she visited their meetings, and "preached the gospel of our Lord Jesus Christ." They were comforted by her ministry, and with her innocent conversation, which accorded with her holy profession, so they add, "we had unity with her in doctrine and conversation."

She and her companion reached Philadelphia, in time to be at the Yearly Meeting of Ministers, held Seventh mo. 22d, 1719, wherein Rebecca Turner gave a satisfactory account of their labours in the arduous service in which they had been engaged.

(To be continued.)

From the Germantown Telegraph.

Model Butter Dairy.

Mr. Editor:—A well-managed dairy is not only an interesting branch of the rural art, but an exceedingly profitable one. There can be no doubt, that to conduct a farm in such a manner that the most profit may be realized, the products of the dairy are as indispensable, as the cultivation of the soil would be fruitless without the aid of manure. Hence, it is of considerable importance, that more attention should be devoted by practical farmers in general, to this much neglected branch of their pursuit. Indeed, it would be well if more emulation could be excited upon the subject, that the benefits accruing from a well-kept dairy may be more widely extended. It is true, there are many very fine dairies in the State of Pennsylvania, but where we find one that may be counted good, a dozen others, or perhaps a whole neighbourhood for miles around, is devoid of anything worthy of notice. Now, this apathy upon the part of many,

in regard to the advantages to be derived from the dairy, is not for the want of examples or "model dairies," but from an indifference to all improvement in their agricultural operations. To such, of course, these remarks will have no interest, unless perhaps, the love of gain should preponderate, and cause this antipathy to improvement to be overcome in the desire for that which will elevate them to the same position with their more favoured neighbour.

In view, therefore, of infusing more energy into this branch of the agricultural business, a short description of the "Model Dairy," of James C. Cornell, of Bucks county, will serve to convince by facts, what I certainly would fail to prove by words. The dairy of this gentleman consists of 20 head of superior cows, some of which are thorough-bred Short Horns, others grades of the Devon, Durham and native breeds. These cows have been selected with great care from time to time, always paying particular attention to their milking properties in regard to the production of butter. By thus selecting, and rejecting all that would not come up to his standard, he has obtained a "model herd," that will vie with any other of the same number in the State. In connection with this judicious method of procuring a reliable stock of cows, the greate t care and attention is always exercised both in winter and summer to provide for all their wants, that no deficiency may occur in their yield unless by accident or sickness.

The milk, after being taken from the cows, is deposited in the spring-house in tin pans, ranged upon boarded trussels in winter, and in summer these are removed and the pans placed in the water which flows around the brick platform in the centre, all of which is kept scrupulously clean. In winter a stove serves to create the proper temperature, and obviates the necessity of removing from the spring-house in the fall to some warmer location. When the cream has sufficiently risen, it is then skimmed off very expertly by a peculiar process, and when the desired quantity of cream is obtained, it is put into a large barrel-churn which is worked by horse-power, and in a very short time it is converted into butter. From the churn the butter is taken to the patent butter-worker, which soon removes the buttermilk, and leaves it in a proper state for salting; after which it remains twenty-four hours, in order that the salt may dissolve before preparing it in pounds for the market. In proximity to the spring-house is a large trough into which all the sour milk, buttermilk, &c., is poured, and by a well-trained signal, the swine designed for young pork trot forth from their respective styes and convey the contents therefrom with a satisfied grunt to convert it into an wholesome account upon their return, until the signal again summons them to a repetition of the same desirable duty upon their part.

Having thus given a little insight into the manner of conducting the dairy, I will merely add, that the average of the products for the past two or three years, has been $1600, or $80 for each cow. It will be understood, however, in this connection, that the young pork produced from the refuse milk, as well as all the calves sold, is considered as the production of these twenty cows. And beyond this, the manure obtained upon the farm by keeping this amount of horned stock, besides an average of six or eight horses, including colts, is so great, that it is ample, with the addition of lime, to enrich the land to such an extent that no just conception of its fertility can be formed by any description of the pen. The number of acres cultivated is only 125, and yet seventy tons of hay are sold annually, besides what is required for the consumption of so large a stock. Indeed, it appears when looking over these teeming acres, that nature has perfected herself, and no more can be accomplished by the hand of man to induce her to make any addition to her already overburdened bosom. And while we admire the bountiful crops that meet the eye at every point, we could almost believe that we had entered into the "promised land" that Moses was only permitted to view from the "top of Pisgah."

Making a Needle.—Needles are made of steel wire. The wire is first cut by shears from coils into the length of the needles io be made. After a batch of such bits of wire are cut off, they are placed in a hot furnace, then taken out and rolled backward and forward on a table until they are straight. They are now to be ground. The needle-pointer takes up two dozen or so of the wires, and rolls them between his thumb and fingers, with their ends on the grindstone, first one end and then the other. Next is a machine which flattens and gutters the heads of ten thousand needles an hour. Next comes the punching of the eyes; and a boy does it so fast the eye can hardly keep pace with him. The splitting follows, which is running a fine wire through a dozen, perhaps, of these twin needles.

A woman, with a little anvil before her, files between the heads and separates them. They are now complete needles, but are rough and rusty, and they easily bend. The hardening comes next. They are heated in batches in a furnace, and when red hot are thrown into a pan of cold water. Next they must be tempered, and this is done by rolling them backward and forward on a hot metal plate. The polishing still remains to be done. On a very coarse cloth needles are spread, to the number of forty or fifty thousand. Emery dust is strewed over them, oil is sprinkled, and soft-soap daubed by spoonfuls over the cloth; the cloth is then rolled hard up, and, with several others of the same kind, thrown into a sort of wash-pot, to roll to-and-fro for twelve hours or more. They come out dirty enough; but after rinsing in clean hot water, and tossing in sawdust, they look as bright as can be, and are ready to be sorted out and put up for sale.—*Scientific American.*

Ruins of Sebastopol.—A correspondent of the Paris Patrie, writing from Sebastopol, says it is generally thought that Sebastopol will not be rebuilt, as it would cost as much to clear away the rubbish of the old city as to build a new one. There is literally nothing left of the city but shapeless ruins. The bullets are as thick on the ground as hailstones. Of the magnificent barracks, containing hospitals, churches, &c., and consisting each of twenty-five or thirty different buildings, nothing is left but huge piles of stones.

Perforated or Solid Bricks.—Some experiments have lately been made on the comparative sustaining power of patent perforated bricks, and bricks of the ordinary kind. In each case, a pier of four courses of the bricks to be tested, was built in Roman cement, on the table of a powerful hydraulic press, and allowed at least twenty-four hours thoroughly to set. A light scale board was suspended to the safety valve lever of the press, on which there were placed successive weights, until the pier of bricks on the table of the press was crushed. The number of weights was increased a quarter of a pound at a time—being equivalent to an increment of ten tons upon the press—commencing at thirty tons, this starting point being the effect due to the united weights of the lever and scale-board. The pumps were worked very slowly, to eliminate the concussion produced otherwise by the inertia water. The first experiment was made with ordinary brick in a pier of eighteen inches s built in four courses. This showed sympto failing with 110 tons, and was crushed with tons. A pier of the same dimensions of perfo bricks, began to crack with 270 tons, and crushed with 350 tons.

For "The Fri

Censuring Others and forgetting our own Weakn

And why beholdest thou the mote that is i brother's eye, but considerest not the beam t in thine own eye; Or how wilt thou say t brother, Let me pull out the mote out of thine and behold, a beam is in thine own eye? T hypocrite, first cast out the beam out of own eye; and then shalt thou see clearly t out the mote out of thy brother's eye. Matt 3, 4, 5.

It is not one of the least of the stratagems c enemy of souls after he has drawn away the from following Christ agreeably to his will inw ly revealed, and has so far gained ground upo captivated soul as to lead into weakness and it sistencies, to endeavour to ease the troubled by holding up to view the seeming weakness inconsistency of those who are considered amo the foremost ranks: and truly the weaknesses are apparent in our once more highly favo Society, are enough to cause the hands of the den-bearers to hang down, and their knees to together, and to raise the cry in our hearts, "S thy people, O Lord, and give not thy heritage t proach." Yet our condition never will be r better by our spending our strength in endeav ing to excuse ourselves in wrong things by faults of others. Rather let the query of our h be, "What lack I yet?" Is it not to be feared n would go away sorrowful if it was shown us how n we did lack, and what was required of us to with in order that we may have treasure in Hea If we were only willing to believe that a bea in our own eye, and willing to cast it out; to our own hearts searched and cleansed, and willing to come up in the line of individual f fulness, a different state of things would soo brought about amongst us; our Society would shine forth with its ancient brightness, and our dition as a militant Church be comparable to spoken of by Solomon, under divine authorit reference to the graces of the true Church: "T art beautiful, O my love, as Tirzah, comel Jerusalem, terrible as an army with banners."

When we discover a disposition in ourselves to fault with our fellow-members, and to think nothing is transacted as it ought to be in whic have not a part, it is then indeed time we sh examine our own hearts, and see where the w ness has got in that has caused us to deviate the right path, and endeavour to turn again to Heavenly Unction, the Divine Anointing, by w we would be enabled to see ourselves as are seen in the Divine sight. It is as we a under the Heavenly Unction that the beam co to be cast from our eyes, and we are enable see when a brother or sister's sight is dimmed mote: and what concern would arise in our he that it might be removed. We would have no position to censure our fellow-members who sound in the faith, if we were in a proper condi ourselves, because they did not see as we sa all things relating to the affairs of the Church. if we believed from what was made manifest in Light, that the spiritual vision of any was g ing dim; if our hearts were imbued with that which is from above, we would ardently d

eyes of such might be afresh anointed with
salve of the kingdom, that they might see
is they really are, and the query might
our heart: "Lord what wouldst thou
e to do?" for the restoration of these. Yet
continue to slight the heavenly vision, the
ay come when the language to the inspired
en or watchwomen concerning these may
ar to that of the Most High to the prophet
concerning Saul: "How long wilt thou
for Saul? seeing I have rejected him from
g over Israel?"
prophet did not reject the King until he
ected of the Lord for not keeping his com-
ents: and how it grieved Samuel when the
f the Lord came to him saying: "It re-
e me that I have set up Saul to be King, for
urned back from following me, and hath not
y commandments:" and it grieved Samuel,
cried unto the Lord all night. If we were
concerned for our fellow members, it would
us to see any reject the manifestations of the
God, until it was not best for us to mourn any
for them, seeing the Lord had rejected them.
how vain will it be for any of us to attempt
fy ourselves in wrong-doing, because others
orsaken the Lord, the fountain of living
, and have hewn to themselves cisterns that
t broken cisterns, that will hold no water.
sey-woolsey garment will do for a covering
great day of account: no covering will do in
y but the covering of the Lord's Spirit: we
ve a work to do that no man can do for us.
man can redeem his brother, or give to God a
n for his soul." If we dwelt sufficiently under
ling of our own fallibility and infirmities, we
not have so much to say of the failings of
. Are not many of us too much like the
see, of whom we read that he presumed to
God that he was not as other men are,
s the poor Publican, who was so under
e of his condition, that he would not so much
up his eyes unto Heaven, but smote upon
east, saying, "God be merciful to me a sin-
This man went down to his own house justified
than the other. We all have sinned, and come
of the glory of God, and it is awfully im-
nt for us, that our sins should go beforehand
judgment, and not have them to follow after.
t us turn our minds inward, and strive to know
ay's work to keep pace with the day, and not
our strength in speaking lightly of any, and
ally those whose judgment is perhaps better
our own.
ow often it is, that those who are young in re-
s experience are tempted to think lightly of
elder brethren and sisters, because they do
el it right to go so far or so fast as the zeal
e youth would carry them. When the enemy
ot shake our faith in the all-supporting arm of
he power, he is very likely to come in on the
hand, and endeavour to create an improper
which would hurry us on before our Guide;
those who feel it right to hold back a little,
represented by the enemy as not being fully
ainted with the Power of Divine Grace, and
ot having discernment to know what it is that
the King's seal upon it. And it may be that
he present day of sifting, there are those in the
on of watchmen and watchwomen, who, for
t of abiding sufficiently under the true anoint-
may have lost somewhat of the Spirit of true
ernment, and do restrain some, to the oppress-
of the pure Seed. Yet if there is an abiding
h the Master, he will carry through all; he is
for his own work; he will not give his glory to
ther; he can make a way in his own time. Let
us be willing therefore to wait the full appointed time, and not become restless and uneasy, and give way to a spirit that would lead into feelings of disunity with our elder brothers and sisters. If we rightly knew the value of this unity, we would prize it more than it is to be feared many do. The Apostle doubtless knew the value of it when he exhorted the Ephesians in his epistle on this wise: "I, therefore, the prisoner of the Lord, beseech you that ye walk worthy of the vocation wherewith ye are called, with all lowliness and meekness, with long-suffering, forbearing one another in love. Endeavouring to keep the unity of the Spirit in the bond of peace."

The unity of the spirit is known to be precious to all those who have been brought into this condition. We know that we have passed from death unto life (said one formerly,) because we love the brethren. For brethren to dwell together in unity is (as the psalmist beautifully describes it) like the precious ointment upon the head, that ran down upon the beard, even Aaron's beard, that went down to the skirts of his garments. As the dew of Hermon, and as the dew that descended upon the mountains of Zion, for there the Lord commanded the blessing, even life for evermore.

Chester County, Seventh mo.,1856.

British India.—The Marquis of Dalhousie has, within eight years, annexed the Punjaub, with an area of 78,000 square miles, and a population of 7,000,000; he has annexed Berar, with an area of 80,000 square miles, and a population of 4,000,000; he has annexed Pegu, with an area of 20,000 square miles, and a population of 1,500,000; and he has annexed Oude, with an area of 24,000 square miles, and a population of 3,500,000. The country thus annexed is equal to twice the extent of the three United Kingdoms, with a population exceeding in number all the inhabitants together of Belgium, Holland, Denmark, and the two Scandinavian kingdoms. The financial results of his government are, however, the London Examiner remarks, very far indeed from corresponding with the mightiness of these acquisitions. In every year of the administration of Lord Dalhousie, with the exception of one, when there was a paltry surplus of $1,761,000, there has been a defalcation of revenue ranging from one to two millions sterling, and last year it was the worst of all, for the deficiency amounted to $12,500,000, a sum equivalent to a defalcation of $40,000,000 in the imperial revenue.

Departure of Emigrants.—The ship Elvira Owen sailed from Savannah on the 21st Sixth mo., for Monrovia, Liberia. She carries out three hundred and twenty-one emigrants. Forty-three of them were from Virginia, liberated by the will of James Kelly, and by him furnished with $15,000. Nine were from Norfolk, free; and five from Virginia, liberated by the will of — Noel. There were of free persons, two from Litchfield, Conn., four from Maryland, two from Columbus, Ga., four from Augusta, Ga., three from Savannah, Ga., one from Raleigh, N. C., and two citizens of Liberia who had come to this country on business. Twelve were from Halifax, N. C., liberated by the will of — Simmons; twenty-nine from Kentucky, liberated by will of — Graves, and by him furnished with $14,800; thirty-eight from Kentucky, liberated by sundry persons; seven from Missouri, liberated by — Fullerson; seven from Gallatin, Tenn., liberated by — Barr; two from Gallatin, Tenn., liberated by Lincoln Clark; five from Augusta, Ga., liberated by the will of — Martin; thirty-four from Winchester, Tenn., liberated by — Sharp; fourteen from Columbus, Miss., liberated by — Holderness; one man from Adairsville, Ga., bought himself; three from Augusta, Ga., liberated by — Marks; nineteen from Rocky Plains, Ga., liberated by David Floyd; one from Columbia, Tenn., liberated by Judge Kennedy; and forty-one from Gwinnett county, Ga., liberated by the will of George M. Walters.

It will be seen that, of this large cargo of emigrants, nearly all were slaves, freed voluntarily by their owners, and in two cases furnished generously with money, to the aggregate amount of nearly thirty thousand dollars, to give them a start in their future homes.

This vessel has on board the frames of two large houses, each 36 by 96 feet, and each containing 21 rooms, which were made in Boston, and prepared by a process known as *Burnetizing*, so as to prevent decay. These are intended to be put up and used in that country as receptacles for the emigrants upon arrival.

The Rev. John Seys, well known by his labours as a missionary of the Methodist E. Church in Liberia, embarked in the Elvira Owen in the capacity of Agent of the Colonization Society. His mission is to establish, if practicable, an interior settlement in a high and salubrious region, remote from the seacoast, and adapted to agricultural pursuits.

THE FRIEND.

SEVENTH MONTH 26, 1856.

Our citizens have been again shocked by one of those terrible railroad collisions, which are so frequently occurring in different parts of the country, bringing death and sorrow into the abodes of many, and harrowing up the feelings by the mutilation and anguish of those who, escaping instant destruction, are left with broken limbs or mangled bodies, to pass days of suffering before life is worn out, or perhaps, if life is spared, to spend the remaining portion of time allotted to them, maimed and crippled. This event has been particularly affecting, from the great number of lives sacrificed, and the peculiar circumstances attending. An arrangement had been made with those having the control of the North Pennsylvania railroad, to take on a pleasure excursion, a large number of children and young adults, attached to one of the Roman Catholic congregations in the north-eastern part of the city. Sixteen hundred tickets were issued, and on the morning of the 17th inst., a train of nine cars, carrying between six and seven hundred, started for the place of destination at five o'clock. It appears, that owing to some detention on the road soon after leaving the city, the train was behind time near twenty minutes, and the conductor, not giving sufficient heed to the fact that the regular train coming down was entitled to the road after waiting for fifteen minutes, instead of placing his cars on a siding, so as to be out of the way, and waiting until the down train had passed, resolved to push on, hoping by increased speed to make up for the lost time, and to arrive at a station where the up and down trains would pass. But the down train having staid at the station as long as required by the rules, had proceeded on its way, and in passing a short curve, the two trains met; with but little notice of each other's approach they rushed together, and five of the nine cars filled with the excursionists, were completely wrecked, killing at once upwards of fifty of those who but a little while before had left their homes probably filled with anticipations of mirth and happiness. To add to the horror of the scene, the cars at once took fire from the live coals thrown into them from the furnace of the locomotive, and numbers perished in the flames, who could not be extricated from the

mass of ruins. Numbers were crushed and mangled in the most terrible manner, of whom several have since died, making upwards of sixty up to this time, who have fallen victims to this awful catastrophe.

It seems useless to comment on these fearful accidents, if accidents they may be called; for such seems to be the recklessness of many of those in whose hands the conduct of railroad travelling is entrusted, and the thoughtlessness of travellers about their own safety, provided they are but hurried along at the highest speed, that all that can be said, will avail but little. The value of human life, and the responsibility of risking its destruction, without first securing all those precautions against danger, which human foresight and ingenuity can accomplish, must be more deeply and generally felt, before that care and caution will be observed, which alone can free both the conductors and the public from the fearful charge of criminal neglect, which rests more or less heavily upon them. A great responsibility rests somewhere, which, when obstinately disregarded, or carelessly subjected to violation, under a hope of escaping without injury, brings a load of guilt which the most insensible must find hard to bear.

The conductor of the down train in the late collision, notwithstanding that he was acting in accordance with the rules of the company, and would therefore appear not to be blameworthy, was so greatly distressed by the occurrence, and the heart-rending scenes accompanying it, that he committed suicide, in a few hours after.

From the following, taken from the Public Ledger, it will be seen that the loss of human life, and the amount of human suffering, by railroad accidents during the last three years in this country, have been very great.

Railroad Accidents.—The following is a record of the most lamentable railroad accidents which have occurred in the United States since the commencement of the year 1853. It will be seen that the recent collision on the North Pennsylvania road resulted in a greater number of killed and wounded than attended any previous accident:—

Date.	*Road.*	*Killed.*	*Wounded.*
1853.			
March 7.	Baltimore and Ohio,	8	24
April 25.	Michigan Southern,	21	50
May 6.	N. York and N. Haven,	46	24
Aug. 2.	Belvidere and Delaware,	11	14
Aug. 9.	Camden and Amboy,	4	20
Aug. 12.	Providence & Worcester,	14	24
1854.			
March 6.	Susquehanna,	—	67
July 4.	Susquehanna,	34	60
Aug. 29.	Camden and Amboy,	23	67
Nov. 1.	Rock Island,	12	24
1856.			
Feb. 1.	Philad. and Harrisburg,	1	27
June 17.	North Pennsylvania,	50	100
	Total,	224	501

It will be seen that nearly two-thirds of the whole number of killed and wounded have been the result of accidents which have occurred to trains coming in or leaving the cities of Philadelphia and Baltimore. Seventy-eight killed, and two hundred and fourteen wounded were on Philadelphia trains, and forty-two killed and one hundred and fifty-four wounded on Baltimore trains.

SUMMARY OF EVENTS.

EUROPE.—News from England to Seventh mo. 5th. The probability of an amicable settlement of the difficulties with the United States, is said to be increasing, and the good effects of this feeling to be manifest both in finance and trade. The negotiations with the American Minister were resumed on the 30th ult. A treaty has been negotiated between Great Britain and Honduras, by which the Bay Islands are retroceded to the last named Power, upon such conditions as, it is believed, will be acceptable to the U. S. government, and in accordance with its policy. The Bank of England had made no further reduction of the rate of interest as was anticipated. American securities were in increasing demand. A bill has been introduced in Parliament permitting distillation from rice. Eleven thousand four hundred and fifty-seven emigrants left the port of Liverpool during the Sixth month, of whom 8600 have proceeded to the United States. It is reported that a Conference of the three Protecting Powers is to be held in London during the present month, to consider and settle the affairs of Greece. The King of the Belgians and royal party had arrived at London on a visit to the Queen. The French troops had nearly all left the Crimea. In France, the harvest was fine, dissipating all fears of scarcity. In Prussia, Austria, and Spain, the crops were average; but in Portugal, the prospects were unfavourable. In Great Britain, good crops were expected. The formal adhesion of Sweden and Norway to the maritime law established by the Congress at Paris, has been published. Several provinces in Austria have sustained great damage by violent hail storms. The destruction of wheat is said to have been enormous.

Liverpool Markets.—The sales of cotton for the week, reached 80,000 bales, and prices have advanced 1-16 a $\frac{1}{8}$d. Breadstuffs had slightly declined.

London Markets.—American stocks were higher, and prices firm, with a large business. The bullion in the Bank had increased £655,000. Consols for money are quoted at 95$\frac{3}{8}$ a 95$\frac{5}{8}$.

CHINA.—The latest intelligence reports alarming successes of the insurgents in various quarters. In Kiangsi, they have taken the large and important city of Kinchongfoo. The city of Yangchow, to the north-west of Shanghai, has also fallen into their hands. At Nankin, the rebels are said to be established in great security.

CAPE OF GOOD HOPE.—Advices to Fourth month 24th bring unfavourable accounts respecting the tranquillity of the frontier. Another Caffre war seems imminent.

MEXICO.—The decree that the clergy are not permitted to hold property was published in Mexico on the 26th ult. The people in general congratulated President Comonfort on that important step. The Jesuits are to leave the country. The Spanish difficulties are settled. The ports are open for emigrants, and liberty of conscience has been guaranteed by the Congress. Such liberality gives some hope that Mexico will yet rise from her debasement, and assume rank among the nations of the earth as a fixed and permanent power.

HAVANA.—Advices to the 18th inst., state that a large American clipper-built ship landed a cargo of 750 Africans in the Bay of Cabanos a short time previous. The slaver had been fitted out at New York about six months previously. The clipper ship War Hawk had landed a cargo of 508 Coolies, 42 having died on the passage, from suicide and disease. The yellow fever prevailed to some extent in the environs of the city. Gen. Concha was down with it.

UNITED STATES.—*Congress.*—A bill has been introduced into the Senate retroceding Georgetown to the State of Maryland. The bill appropriating $3,000,000 for the purpose of increasing the munitions of war, and for purposes of defence, after discussion, was postponed. The bill to amend the act to promote the efficiency of the navy, has passed the Senate, also a bill from the House for the construction of a road from Fort Ridgely, in Minnesota, to the South Pass of the Rocky Mountains. The House of Representatives having passed a resolution of censure against Keitt, of South Carolina, for his conduct in connection with the Sumner outrage, induced him to resign his membership. The Governor of South Carolina has accepted the resignations of Brooks and Keitt, and ordered new elections for the 26th inst. It is supposed they will be both re-elected without opposition.

New York.—Mortality last week, 531, of whom 414 were natives of the United States, and 372 children, under ten years of age. The immigrants arrived at this port, from first mo. 1st to Seventh mo. 1st, numbered 66,256. The city tax for 1856 will be $7,075,425, about one million more than the tax of last year.

Philadelphia.—Mortality last week, 329.

Railroad Disaster.—On the 17th inst., a collision occurred between two trains on the North Pennsylvania Railroad, which was attended with appalling injury and loss of life. A train left the Shackamaxon depot at 5 A.M., with 600 children attached to the "Sunday School of St. Michael's Catholic Church," Kensington, who were accompanied by their teachers, and many of their parents. Owing to the number of persons in the cars, the train was delayed beyond the time appointed for it to start, hence the speed was increased on the way to make up the time thus lost. At a few minutes after six o'clock, the excursionists reached Camp Hill, some thirteen miles from Philadelphia, and while passing around the curve at this point, and the track being also hid by a de the locomotive, while pulling the train at the about thirty miles per hour, came in collision wi regular passenger train which left Gwynedd at six o The engineers on the train did not see the danger unt were within 100 yards of each other; the break immediately put down, and the engines reversed, b in time to break the force of the concussion. F the excursion cars were broken to atoms, scattering living load upon the ground. To add to the con and horror of the scene, several of the cars took fir the locomotive, and many of the passengers were cated or burned to death. The bodies of some w tirely consumed. The conductor of the down train mitted suicide the same day. The conductors o trains are said to have violated their instructions. sixty persons, including the priest of the congre have thus come to an untimely end, and many have received terrible injuries. The total num wounded is between 80 and 100.

Steamboat Disaster.—On the morning of the 16t steamer Northern Indiana took fire on Lake Eri was burned to the water's edge. Many of the p gers were saved by other vessels, but 26 p perished.

Miscellaneous.—Iowa Railroads.—It is stated th Legislature of Iowa have passed a bill giving the recently donated by Congress for railroad purpo four railroads running across that State, the Miss and Missouri, the Dubuque and Big Sioux, the and Iowa Central, and the Burlington and Mi These roads get about 1,200,000 acres each.

Western Steamboats.—The St. Louis Democrat co a list of the disasters in the western rivers durin six months ending on the 30th of Sixth month las number of steamers lost is forty-six, as follows; 1 10; by collision, ice, snags, &c., 36; total, 46. number of lives lost was 43. During the same there were two explosions. The total amount of pr destroyed was $1,200,000.

Value of Swine at the West.—The number of hogs States of Ohio, Indiana, Michigan and Kentucky time is estimated by the editor of the Ohio Far 10,943,334, which, at $3 a head, a fair average v the stock, amounts to $32,830,002. If fat and sol would average $10 a head, $109,433,340.

The Ohio River.—Last week there was only t five inches water in the channel at Pittsburg, metal mark, and falling. At Cincinnati, the riv receding slowly, with four feet scant in the chann

The Crops in Porto Rico, W. I.—Advices from guez, P. R., to the 24th ult., say that the produce Island was never more prolific than this year. Th of sugar and molasses was never known to exc present crop, in quantity or quality. The growing are promising, the weather most favourable, a health of the island is very good.

"Knowledge is Power."

(Continued from page 362.)

John Tanner was accounted a rich man by the Indians—doubtless because he was more industrious than the greater number of them; but we have seen that privations he often suffered. He suffered privations because there was no capital, no accumulation of the products of labour in the country in which he lived. Where such a store exists, the poorest man has a tolerable certainty that he may increase his share of it as an exchanger; and the richer the store the greater the certainty that his profits, or the power of adding to the store, will yield a full proportion of what previous labour has created together.

In 1856, the amount of money vested to the account of depositors in seventy-three of the savings-banks of Massachusetts, was $27,296,216—paying an annual interest of more than a million of dollars. The statistics of Great Britain inform us, that since the establishment of these institutions in the kingdom down to the year 1853, the gross amount of interest paid to depositors was upward of *one hundred and fourteen millions of dollars.* This capital which has so fructified as to produce one hundred and fourteen millions as interest, was the result of the small accumulations, penny by penny, shilling by shilling, and dollar by dollar, of savings of that class of persons who, in every country, have the greatest difficulty in accumulating. The mutual efforts of self-denial, and a rigid determination to postpone temporary gratification for permanent good, could alone have enabled these accumulators to retain so much of what they had received beyond the amount of what they consumed.

The capital sum of more than twenty-seven millions now belonging to the depositors in the seventy-three savings-banks of Massachusetts, represents as many products of industry as could be bought by that sum. It is a capital which remains for the arrangement of *productive* consumption; that is, it is now applied as a fund for setting others to produce, to enable them to consume while they produce, and in like manner to accumulate some part of their productions beyond what they consume. The amount of interest which the depositors have received is the price paid for the use of the capital by others who require its employment. The whole amount of our national riches—the capital of this and of every other country—has been formed by the same slow but certain process of individual savings, and the accumulations of savings, stimulating new industry, and yielding new accumulations.

The consumption of any production is the destruction of its value. The production was created by industry to administer to individual wants, to be consumed, to be destroyed. When a thing capable of being consumed is produced, a value is created; when it is consumed, that value is destroyed. The general mass of riches then remains the same as it was before that production took place. If the power to produce, and the disposition to consume, were equal and constant, there could be no saving, no accumulation, no capital. If mankind, by their intelligence, their skill, their division of employments, their union of forces, had not put themselves in a condition to produce more than is consumed while the great number of industrious undertakings are in progress, society would have been stationary, civilization could never have advanced.

It may assist us in making the value of capital more clear, if we take a rapid view of the most obvious features of the accumulation of a highly civilized country.

The first operation in a newly settled country is what is termed to clear it. Look at a civilized country, such as the United States. It *is* cleared. The encumbering woods are cut down, the unhealthy marshes are drained. The noxious animals which were once the principal inhabitants of the land are exterminated; and their place is supplied with useful creatures, bred, nourished, and domesticated by human art, and multiplied to an extent exactly proportioned to the wants of the population. Forests remain for the produce of timber, but they are confined within the limits of their utility; mountains "where the nibbling flocks do stray," have ceased to be barriers between nations and districts. Every vegetable that the diligence of man has been able to transplant from the most distant regions is raised for food. The fields are producing a provision for the coming year; while the stock for immediate consumption is ample, and the laws of demand and supply are so perfectly in action, and the facilities of communication with every region so unimpeded, that scarcity seldom occurs, and famine never. Rivers have been narrowed to bounds which limit their inundations, and they have been made navigable wherever their navigation could be profitable. The country is covered with roads, with canals, and now, more especially, with railroads, which render distant States as near to each other for commercial purposes as neighbouring villages in less advanced countries. Science has created the electric telegraph, by which prices are equalized through every district, by an instant communication between producers and consumers. Houses, all possessing some comforts which were unknown even to the rich a few centuries ago, cover the land, in scattered farm-houses and mansions, in villages, in towns, and in cities. These houses are filled with an almost inconceivable number of conveniences and luxuries—furniture, glass, porcelain, plate, linen, clothes, books, pictures. In the stores of the merchants and traders, the resources of human ingenuity are displayed in every variety of substances and forms that can exhibit the multitude of civilized wants; and in the manufactories are seen the wonderful adaptations of science for satisfying those wants at the cheapest cost. The people who inhabit such a civilized land have not only the readiest communication with each other by the means of roads and canals, but can trade by the agency of ships with all parts of the world. To carry on their intercourse among themselves they speak one common language, reduced to certain rules, and not broken into an embarrassing variety of unintelligible dialects. Their written communications are conveyed to the obscurest corners of their own country, and even to the most remote lands, with prompt and unfailing regularity, and now with a cheapness which makes the poorest and the richest equal in their power to connect the distant with their thoughts by mutual correspondence. Whatever is transacted in such a populous hive, the knowledge of which can afford profit or amusement to the community, is recorded with a rapidity which is not more astonishing than the general accuracy of the record. What is more important, the discoveries of science, the elegances of literature, and all that can advance the general intelligence, are preserved and diffused with the utmost ease, expedition, and security, so that the public stock of knowledge is constantly increasing. Lastly, the general well-being of all is sustained by laws—sometimes indeed imperfectly devised and expensively administered—but on the whole of infinite value to every member of the community; and the property of all is defended from external invasion and from internal anarchy by the power of government, which will be respected only in proportion as it advances the general good of the humblest of its subjects, by securing their capital from plunder and defending their industry from oppression.

This capital is ready to be won by the power of every man capable of work. But he must exercise this power in complete subjection to the natural laws by which every exchange of society is regulated. These laws sometimes prevent labour being instantly exchanged with capital, for an exchange necessarily requires a balance to be preserved between what one man has to supply and what another man has to demand; but in their general effect they secure to labour the certainty that there shall be abundance of capital to exchange with; and that, if prudence and diligence go together, the labourer may himself become a capitalist, and even pass out of the condition of a labourer into that of a proprietor, or one who lives upon accumulated produce. The experience of every day, especially in the United States, where lowliness of birth or position is no barrier to success, shows this process going forward—not in a solitary instance, —but in the case of nearly all our eminent merchants, manufacturers and capitalists, whose commencement in life was of the most humble character. That noble New England merchant, Amos Lawrence, whose beneficence and charity is to be counted in hundreds of thousands of dollars, came to Boston, his clothes in a bundle and a few dollars in his pocket, to enter as a subordinate clerk in the store of a small trader. The germ of the colossal fortune acquired by John Jacob Astor, was once contained in the small pack which he bore upon his shoulders in the capacity of a travel-

ling merchant. Instances of a similar nature are familiar to every one. But if the labourer or the great body of labourers were to imagine that they could obtain such a proportion of the capital of a civilized country except as exchangers, the store would instantly vanish. They might, perhaps, divide by force the crops in barns and the clothes in warehouses; but there would be no more crops or clothes. The principle upon which all accumulation depends, that of security of property, being destroyed, the accumulation would be destroyed. Whatever tends to make the state of society insecure, tends to prevent the employment of capital. In despotic countries, that insecurity is produced by the tyranny of one. In other countries, where the people, having been misgoverned, are badly educated, that insecurity is produced by the tyranny of many. In either case, the bulk of the people themselves are the first to suffer, whether by the outrages of a tyrant or by their own outrages. They prevent labour by driving away to other channels the funds which support labour.

(To be continued.)

Epistle of George Fox.

About this time many mouths were opened in our meetings, to declare the goodness of the Lord, and some that were young and tender in the truth would sometimes utter a few words, in thanksgiving and praises to God. That no disorder might arise from this in our meetings, I was moved to write an epistle to Friends, by way of advice in that matter. And thus it was:—

All my dear friends in the noble seed of God, who have known his power, life, and presence among you, let it be your joy to hear or see the springs of life break forth in any; through which ye have all unity in the same feeling, life and power. And above all things, take heed of judging any one openly in your meetings, except they be openly profane or rebellious, such as be out of the truth, that in by the power, life and wisdom ye may stand over in them, and by it answer the witness of God in the world, that such whom ye bear your testimony against, are none of you; that therein the truth may stand clear and single. But such as are tender, if they should be moved to bubble forth a few words, and speak in the Seed and Lamb's power, suffer and bear that, that is, the tender. And if they should go beyond their measure, bear it in the meeting for peace and order's sake, and that the spirits of the world be not moved against you. But when the meeting is done, if any be moved to speak to them, between you and them, one or two of you, that feel it in the life, do it in the love and wisdom that is pure and gentle from above; for love is that which edifies, bears all things, suffers long, and fulfils the law. In this ye have order and edification; ye have wisdom to preserve you all wise and in patience; which takes away the occasion of stumbling the weak, and the occasion of the spirits of the world to get up; but in the royal Seed, the heavy stone, ye keep down all that is wrong; and by it answer that of God in all. For ye will hear, see, and feel the power of God, preaching, as your faith is all in it, (when ye do not hear words,) to bind, to chain, to limit, to frustrate; that nothing shall rise, nor come forth, but what is in the power; with that ye will hold back, and with that ye will let up, and open every spring, plant, and spark; in which will be your joy and refreshment in the power of God.

Now ye that know the power of God, and are come to it, which is the cross of Christ, that crucifies you to the state that Adam and Eve were in, in the fall, and so to the world; by this power of God ye come to see the state they were in before they fell; which power of God is the cross in which stands the everlasting glory; which brings up into righteousness, holiness, the image of God, and crucifies to unrighteousness, and unholiness, the image of Satan, that Adam and Eve, and their sons and daughters, are in, in the fall. Through this power of God, ye come to see the state they were in before they fell; yea, I say, and to a higher state, to the Seed, Christ, the second Adam, by whom all things were made. For man hath been driven from God: all Adam and Eve's sons and daughters, being in the state of the fall, in the earth, are driven from God. But it is said, "The church is in God, the Father of our Lord Jesus Christ;" so they who come to the church, which is in God, the Father of Christ, must come to God again; and so out of the state that Adam and his children are in in the fall, out of unrighteousness and unholiness; and they must come into righteousness, true holiness, and image of God; and so out of the earth, whither man hath been driven, when they come to the church which is in God. The way to this, is Christ the Light, the Life, the Truth, the Saviour, the Redeemer, the Sanctifier, and the Justifier; in and through whose power, light and life, conversion, regeneration, and translation are known from death to life, from darkness to light, and from the power of Satan to God again. These are members of the true church, who know the work of regeneration in the operation and feeling of it; and being come to be members of the church in God, they are indeed members one of another in the power of God, which was before the power of darkness was. So they that come to the church, that is in God and Christ, must come out of the state that Adam was in, in the fall, driven from God, to know the state that he was in before he fell. But they that live in the state that Adam was in in the fall, and cannot believe a possibility of coming into the state he was in before he fell, come not to the church which is in God; but are far from that, and are not passed from death to life, but are enemies to the cross of Christ, which is the power of God. For they mind earthly things, and serve not Christ, nor love the power, which should bring them up to the state that Adam was in before he fell, and crucify them to the state that man is in, in the fall; that through this power they might see to the beginning, the power that man was in before the heavenly image, and holiness, and righteousness, were lost; by which power they might come to know the Seed, Christ, which brings out of the old things, and makes all things new, in which life eternal is felt. For all the poorness, emptiness, and barrenness is in the state that man is in, in the fall, out of God's power; by which power he is made rich, and hath strength again; which power is the cross, in which the mystery of the fellowship stands; and in which is the true glorying, which crucifies to all other glorylngs.

And, Friends, though ye may have been convinced, and tasted of the power, and felt the light, yet afterwards ye may feel a winter storm, tempest, and hail, frost and cold, and temptation in the wilderness. Be patient and still in the power, and in the light, that doth convince you, to keep your minds to God; in that be quiet, that ye may come to the summer; that your flight be not in the winter. For if ye sit still in the patience, which overcomes in the power of God, there will be no flying. The husbandman, after he hath sowed his seed, is patient. And ye by the power being kept in the patience, will come by the light to see through, and feel over winter storms and tempests, and all the coldness, barrenness and emptiness; and the same light and power will go over the tempter's head; which power and light was before I

So standing still in the light, ye will see yo
vation, ye will see the Lord's strength, f
small rain, and the fresh springs, your mind
kept low in the power and light, for that w
out of the power, lifts up. But in the pow
light ye will feel God, revealing his secre
spiring your minds, and his gifts coming i
you: through which your hearts will be fille
God's love, and praises to him that lives f
more: for in his light and power his blessing
ceived. So in that, the eternal power of the
Jesus Christ preserve and keep you! Live
one in the power of God, that ye may all c
be heirs of that, and know it to be your p
even the kingdom, that hath no end, and th
less life, which the Seed is heir of. Feel t
over all, which hath the promise and bles
God forever. 1656. G

From "Bell on the H

Of the Horse's Foot.

Nothing is better suited to illustrate ou
ject than the horse's foot. It is a most
piece of mechanism; and whilst examini
we shall be able to infer the peculiari
living mechanism,—that it can be pre
perfect solely by the natural exercise
parts. The horse, a native of extensive plai
steppes, has a structure admirably suited to
his natural pasture grounds. When brought
ever, into subjection, and running on our
roads, his feet suffer from concussion. The
of the horse, so often impaired by lameness
foot, has made this part an object of great int
and I have it from an excellent professor of
nary surgery to say that he has never demons
the anatomy of the horse's foot without fi
something new to admire.

The weight and power of the animal requir
he should have a foot in which strength and
ticity are combined. The first thing that at
attention is the position of the bones. Has
been placed the one directly over the other,
could have been no elasticity; but on the co
they are placed obliquely over each other,
strong elastic ligament runs along behind
terminating by an attachment to the low
coffin bone. So essential is the obliquity
bones to the elasticity of the limb, that by o
ing the position of the pastern bones, and
bone, it is possible to say whether or not a
goes easily without mounting it.

The bones of the foot of the camel rest on
elastic cushion. There is a texture of the same
in the horse's foot, but it acts very different
never comes to the ground; nor indeed do
sole of the horse's foot bear its weight. The
frog, the triangular projection in the hollow
hoof, has above it this elastic frog or cushion.
are essential parts, inasmuch as receiving the
of the animal, they press out the crust, or tha
of the horny hoof which we see when the foot
the ground. The anterior tip of this crust
part which last touches the ground as the foot
is very dense and firm, to withstand the pre
against the ground and the impulse forward
lateral part of the crust, however, is more e
and on its play depends that elasticity of th
which prevents concussion.

This crust is not consolidated with the bone
ed coffin bone; for, between them there are
laminæ. When the animal puts his foot
ground, the weight bearing on the coffin bone
this bone being attached by these elastic lami
the circle of the crust, the lateral parts yield
the weight is sustained by the margin of the

ble never touching the ground, unless it has
e the diseased.
Xenophon, speaking of the Persian horses, says
at their grooms are careful to curry them on a
pavement of round stones, that by beating their feet
gainst a firm and irregular surface the texture of
the hoof may be put into exercise. If corresponds
curiously with this, that our high-bred horses are
subject to a disease of the foot, from which our
coarser draught horses, and Flanders horses, are ex-
empt.

Horses for the turf move with the foot close
to the ground; no time is lost in lifting high the
foot in the semicircle, the race horse being light;
and the foot coming thus down gently, it wants the
delay of the apparatus, whilst the heavy horse
of less blood, lifts its foot in a circle and comes
rapidly on the ground. Hence it may be under-
stood how the lighter horse is subject to contrac-
tion of the foot. The bones, ligaments, and crust
grow out of use, the sole becomes firm as a board,
the sides of the crust are permanently contracted,
the parts have no longer their elastic play, and the
concussion, or striking our hard pavement suffers a shock or
jar, which in time comes "a fever of the foot," which
is inflammation, and that goes on to its total de-
struction. The proof of all this is, that by paring
and softening the exterior of the hoof, so as to re-
store to it its elasticity, the veterinary surgeon cures this
contracted foot, unless the inflammation has been
permitted to destroy the fine apparatus entirely.

That there is a relation between the internal
structure and the covering, whether it be the nail,
horn, or cloven hoof, we can hardly doubt: and
an unexpected proof of this offers itself in the horse.
There are some very rare instances of a horse
having digital extremities. According to Suetonius,
there was such an animal in the stables of Cæsar;
another was in the possession of Leo X.; and Geoff-
roy St. Hilaire, in addition to those, says, that he
has seen a horse with three toes on the fore-foot,
and four on the hind-foot. These instances of de-
viation in the natural structure of the bones were
accompanied with a corresponding change in the
coverings—the toes had nails, not hoofs.

By these examples, it is made to appear still
more distinctly that there is a relation between the
internal configuration of the toes and their cover-
ings—that when there are five toes complete in
their bones, they are provided with perfect nails—
when two toes represent the whole, as in the cleft
foot of the ruminant, there are appropriate horny
coverings—and that when the bones are joined to
form the pastern bones and coffin bone, there is a
hoof or crust, as in the horse, couagga, zebra, and
ass.

In ruminants there is a cannon bone, but the foot
is split into two parts, and this must add to its-
spring or elasticity. I am inclined to think that
there is still another intention in this form; it pre-
vents the foot sinking in soft ground, and permits
it to be more easily withdrawn. We may observe
how much more easily the cow withdraws her foot
from the yielding margin of a river, than the horse.
The round and concave form of the horse's foot is
attended with a vacuum or suction as it is with-
drawn; while the split and conical shaped hoof ex-
pands in sinking, and is easily extricated.

In the chamois and other species of the deer there
is an additional toe. A sort of lesser cannon bone,
with its two pasterns, supports this toe, and is join-
ed by ligament to the larger cannon bone, so that
it must have great elasticity. As a division of the
extensor tendon runs into it, it must increase the
spring when the animal rises from its crouching
position. We see, in these skeletches, that the lesser
metacarpal bone, which, in the horse, entered into
the joint of the "knee," as the splint-bone, is here
brought down to increase the elasticity, or to ex-
pand the foot.

The two lateral toes of the hog are short, and
do not touch the ground, yet they must serve to
sustain the animal when the foot sinks. In the
rein-deer these bones are strong and deep, and the
toe, by projecting backwards, extends the foot hori-
zontally—thus giving the animal a broader base
to stand on, and adapting it to the snows of Lap-
land, on the principle of the snow-shoe. The sys-
tematic naturalist will call these changes in the
size, number, and place of the metacarpal bones,
"gradations;" I see in them only new proofs of
the same system of bones being applicable to every
circumstance, or condition of animals, and furnish-
ing us with other instances of *adaptation*.

I have explained why, I think, that the bones of
the elephant's leg stand so perpendicularly over
each other; there is a peculiarity also in the bones
of the foot. In the foot of the living animal we
see only a round pliant mass, which, when it stands,
resembles the base of a pillar, or the lower part of
the trunk of a stately tree. But when we examine
the bones of the foot, we find this broad base to
consist of the carpus, metacarpus, and phalanges
of the toes; and these bones have a very different
use from what we have hitherto noticed. They
are not connected with a moveable radius, and have
no individual motion, as in the carnivorous animal
—they merely serve to expand the foot, the base
of the column, and to give it a certain elasticity.

I have placed the bones of the foot of the camel
in contrast with those of the elephant. The camel's
foot having no such disproportioned weight to bear
as in the elephant, lightness of motion is secured by
the oblique position of its bones, as well as by the
direction of the bones of the shoulder, which we
have formerly noticed. In the soft texture of the
camel's foot there is much to admire; for although
the bottom be flat, like the sole of a shoe, yet as
we have said, there is between it and the bones and
tendons a cushion so soft and elastic that the ani-
mal treads with great lightness and security. The
resemblance of the foot of the ostrich to that of the
camel has not escaped naturalists.

(To be continued.)

For "The Friend."

When the disciples of our blessed Lord inquired
of him if he would at that time restore the king-
dom unto Israel, He in his inscrutable wisdom saw
meet to reply, that it was not for them to know the
times and seasons that the Father had put into his
own power.

Though they were his beloved disciples, those
that had continued with him in his temptations,
and for whom he had appointed a kingdom, he
directed them to wait for the promise of the Father,
assuring them that they should receive power to
perform his will. Would not this reply be appli-
cable to many amongst us in the present day? "It
is not for you to know the times and seasons that
the Father hath put into his own power." May we
individually endeavour to wait for the promise of
the Father, assuredly believing, that as we wait all
the Lord's appointed time, we shall be enabled to
know and receive ability to perform the duty of
each day, without too much anxicty concerning the
future. The humble, contrite ones, who feel that of
themselves they can do no good thing, are enabled
to look up with confidence, and forward with hope,
that He who regardeth the crying of the poor, and
the sighing of the needy, will in his own time arise
for our help. I would that the eye of our minds
was more undividedly turned to the Shepherd of
Israel, who sleepeth not by day, nor slumbereth by
night. It is doubtless in his wisdom that waves of
affliction are permitted to arise and toss their proud
crests; but when his purpose is effected, He will
be pleased to say, Peace, be still.

When we have in humility and fear endeavoured
faithfully to perform what has appeared to us to be
our religious duty, have we not had abundant
cause to set up our Ebenezer, and say, hitherto
hath the Lord helped us? May we then be en-
couraged to cast our care upon him, *daily and
hourly looking to him for direction*. If we are
but happily favoured to feel our feet established on
the sure foundation, it will be of far greater im-
portance to us than to know what will become of
our beloved Society. It must be by *individual
faithfulness* to the still small voice in the secret of
the soul, that this people will be brought back to
primitive purity. The power of Divine grace is the
same; it is still able to preserve all those who
earnestly endeavour to follow its dictates. No
easier way will ever be found, than that of enduring
the cross, and despising the shame. Our Saviour
emphatically declared that he that taketh not up
his cross daily and followeth me, cannot be my dis-
ciple; he that saveth his life, shall lose it; he that
loseth his life, for my sake, the same shall keep it
unto life eternal. The loftiness of man must be
humbled, and the haughtiness of man laid low; we
must resign our lives to him who died for us, that
henceforth we might not live unto ourselves, *before*
we can be instrumental in the Lord's hand, for the
promotion of the cause of truth in the earth. All
our own workings, all *our own* strivings, cannot
promote our individual advancement or the ad-
vancement of the cause of Truth. Christ will be
head over all things to his church. May we choose
the part that Mary did, even that of sitting at his
feet, to hear his words. As this is our daily con-
cern, I verily believe, that we shall be enabled to
know our proper allotments in his church, and will
be strengthened patiently to abide therein, whether
it be to suffer or to rejoice with him, who knoweth all
our needs. The path of tribulation is that which
the righteous have ever trod; let us therefore not
grow weary of suffering. Afflictions, if rightly en-
dured, will work for us a far more exceeding and
eternal weight of glory.

Ohio, 15th of Seventh month, 1850.

Ants in Africa.

A species commonly known as the "drivers"
(*termes bellicosa*) are so denominated from the fact
that they compel almost every other species of the
animal creation to get out of their way, or submit
to the alternative of being devoured. They are a
black or dark brown species which, in size and
general appearance, is not unlike the common ant
of this country.* It has a sharp, flat head, termi-
nating in a pair of horizontal nippers, with which
it can give a very severe pinch; and, if it gets hold
of a soft part of the skin, always draws blood, but
leaves little or no irritation after it is removed.

The "driver" is the enemy and assailant not
only of every other insect, but of every thing which
comes in its way. They traverse the country by
day and night in trains of a quarter or half-mile
long. They form a running stream, and persons
about to step over the train, as it glides along under
the grass, frequently start back under the impres-
sion of its being a snake. When moving about in
these long files, they are either about to change
their residence, or are in search of food. They are
always preceded by a few straggling guards, who
keep them informed of any dangers or difficulties
that may lie in their way. It is astonishing with
what rapidity a note of alarm can be transmitted
from one end of the line to the other. The soldiers,
who always keep along the side of the regular

column, the moment they receive a note of alarm, set off with all possible despatch for the point of danger, while the main body is either brought to a dead halt, or turned backward; but as soon as the obstruction is removed, or is found not to be insuperable, the main army is set in motion again. They seem to have regular leaders, and there are runners passing backward and forward all the while, as if to keep up a constant communication between the front and the rear. When about to cross a well-trodden path, where they are likely to be disturbed, the soldiers weave themselves into a complete arch, extending across the whole width of the path, under which the females and labourers bearing the larvæ pass without the least exposure. The construction of the arch with their own bodies is one of the most singular and interesting things to be met with in the history of insects. One ant is raised entirely above the ground by having one pair of its feet interlocked with the fore-feet of another standing upright, and the other pair with another in the same posture on the opposite side of the arch. Any number of these are formed, and they are bound together by other ants stretching themselves lengthwise with the arch, and serving as transverse beams to hold the different parts together. The arch, when formed, holds together with the greatest tenacity, and looks like a beautiful net-work of beads. I have frequently put the end of my cane under the arch, and raised it four or five feet from the ground without letting a single ant fall. As soon as they are raised up, however, they begin to unravel themselves from either end of the wreath; but instead of dropping to the ground, they mount up to the end of the cane, and make for the hand which has assailed them. When disturbed in this way, the whole body of soldiers spread themselves over a space of twenty or thirty feet in diameter, over which neither man nor beast can pass without getting some of them upon him and receiving a few sharp nips. A horse can scarcely be forced through them, and a dog never does, except with a bound and a leap, and even then is sure to get one or more about his claws, which are very apt to get hold of his lip in his attempt to remove them from his toes.

They frequently visit dwelling-houses; and if at night, as is frequently the case, it is always to the no little discomfiture of the inmates. They enter by some small hole; and from the point where they emerge, they spread themselves over the floor, along the walls, and over the under surface of the roof, like a great scouring army. Every nook and corner and crevice in the house is explored, and no insect, however small, can elude their search. The human inhabitants are generally apprized of their approach by the fluttering of cockroaches, and the squeaking of mice which have fallen into their toils. The mouse is usually seized in the first instance by a single ant; but in his foolish attempt to get that one detached, instead of running off with it to a place of safety, he gets half a dozen or more on him. In his distress and agony, he falls down and cries out, and is soon overpowered by a multitude sufficient to destroy a much larger animal. In a very few minutes not a trace of the mouse is to be seen, except a little hair and a few of his larger bones; and in the morning the floor may be seen strewed with the wings of cockroaches that have been destroyed in the night. It is necessary for the human inhabitants to abandon the house during their occupancy of it, which, however, is not more than a few hours, and they are more than repaid for this temporary inconvenience by having the house completely rid of all other insects, which is no small matter in any tropical country. I have known persons to be entirely destroyed by them, who, from sickness or lameness, could not get out of their way, and had no one to remove them. It is said that criminals were once punished on this part of the coast by being laid across the tracks of these insects with fetters on. This would be a refinement of cruelty for which no parallel can be conceived. If this ever was the custom of the country, it has long since passed away.

These ants seldom retain possession of any one house more than a few hours; but sometimes it takes them several days to get through all the houses of the same village. There is scarcely any way by which their progress can be arrested; and, as a general thing, it is thought to be the best policy to let them take their regular course. They perform an important service; and the inconvenience which they occasion is temporary, and might well be endured for the advantages which are derived from it.

But in nothing is the ingenuity of these little insects more remarkably displayed than in the expedient to which they frequently resort to cross a little stream on the sand beach after a shower of rain. Sometimes their train is cut in two by one of these little streamlets. To plunge into it singly, they would soon be swept away by the rush of the current. They come to the edge of the water, raise their antennæ, and point them from one direction to another, as if they were taking a scientific view of all the dangers of the crossing. They wander up and down the stream with the greatest uneasiness, and finding no other way to cross, form themselves into a compact knot or raft, of a dozen or more, and launch themselves upon the stream. They have, by previous observation, made sure that they would strike a projecting point or bluff on the opposite shore, and not be carried by the current into the main river. The moment they touch the other side they use their claws like anchors, and hold on until the whole company disengage themselves, and march off in single file in the track of those that have preceded them. I have watched them for hours together, and have seen raft after raft of these little creatures go over safely, when, if they had attempted to get across singly, they would all have been swept into the river.—*J. L. Wilson's Western Africa.*

For "The Friend."

William Dewsbury.

(Continued from page 348.)

After his liberation from York Castle, he pursued his journey through parts of Yorkshire, Nottinghamshire and so to Derby. As he was engaged in preaching the gospel in this town, he was seized and carried before the general sessions then holding. When brought into court with his hat on, one of the judges asked "In whose presence dost thou now stand?" to which W. Dewsbury replied, "In the presence of the everlasting God." On this the jailor was directed to put him in prison for disturbing the court. Towards night the mayor had him called in again, and asked him what he came to do. He answered, "To declare the word of the Lord to the consciences of the inhabitants of Derby." Refusing to leave the place until he felt at liberty, they remanded him to prison; but from some cause, the man under whose charge he was put in the jail, was sent to turn him out, which he did by force, delivering him to another officer, who put him out of the town, charging him to depart and not return. He however did return, and when his service was accomplished, he travelled to Leicester, where he preached to a large number of people—then in the public worship house: when the speaker had done, he preached the word of eternal life to the assembly, who heard him with much attention. Before he had finished, he was carried before the mayor, and committed to prison; but next day the jail keeper was ordered to thrust him out of the town, strictly charging him to depart from thence. This had no more effect than at D[erby] for he returned to finish his testimony to the inhabitants. From this he journeyed into N[orthamptonshire], and tarried for a season at We[llingborough], finding many there whose minds were opened to receive the word of life with much readiness of heart. After an absence of three weeks he returned to this place, and hearing there was to be a lecture in the house, where a man was the preacher who had accused him of deceiving the people, he went and stood in silence until the priest had finished his discourse and dismissed the company. He took this opportunity to exhort the people, and then called on the preacher to make it manifest wherein he had deceived them, or confess his error. Without making any reply, he retreated and left W. Dewsbury, was haled out of the meeting-house into the yard, where he preached to the multitude until the high constable arrived, who threatened to bring a charge of blasphemy against him; but when it was found that nothing could be proved against him, he was liberated. On the following day the constable procured a warrant for the apprehension of "one commonly called a Quaker," and with this took him out of the house of a Friend, to the residence of a bitter persecutor who lived at Whi[ston], finding on him some papers addressed to O[liver] Cromwell, this man made out a mittimus and sent him to the common jail at Northampton.

Speaking of this commitment he says: "On the 10th day of the Eleventh month, I was carried to the Sessions. The justices were in great enmity against the truth, but the witnesses who had sworn against me as they said, for blasphemy, did not appear; they required bondsmen to be bound over for me, for they said I had written strange papers to the lord Protector. I answered, "there shall not any be bound for us; here are our bodies; do with them what you have power to do." He and two companions were returned to the prison. "For truth of God," he says, "was much spread about that day, and a mighty thirst was raised in the hearts of many towards the name of the Lord, praises forever be to him whoseways are past finding out." The firmness of those men in maintaining their principles and testimonies, often made a deep impression on beholders. They saw that their cause of the truth, and the salvation of souls, were promated above all worldly enjoyment, and that they were ready to sacrifice whatever was called for promoting this great cause. In this way convinced and converted men and women were constantly added to the Society. They did not compromise their principles to gain members or to support the Society.

On the 10th of the First month, 1655, he and were brought before Judges Hale and Wyndham when the following examination took place. *Judge Hale.*—Art thou Dewsbury? *W. D.*—Yea, I am so called. *Judge.*—Where dost thou live? *W.*—I have a wife and three children at Wakefield in Yorkshire. *Judge.*—What camest thou into this country to do, that thou didst not stay in thy own country with thy wife and children?

W. D.—I staid in that country with my wife and children, until the Father revealed his Son in me, and called me forth from my wife and children to declare his word of eternal life, which he had manifested to my soul in the great work of regeneration, in the new covenant of life in Christ Jesus. I am sent to preach the everlasting Gospel to the that dwell upon the earth. *Judge.*—I fear it is delusion, and thine own fancies and not the truth.

W. D.—Time will make it manifest. *Judg*

drawest people together and railest against
ers and magistracy.
D.—As thou standest in the presence of God,
heed of hearkening to false accusations. Min-
and magistracy, which are of God, I own;
hose who are called ministers of Christ, and
contrary to Scripture, I disown. *Judge.*—
who are they that walk contrary to the Scrip-
?
D.—They that abide not in the doctrine of
-t; but have the chief place in the assemblies;
t praying in the synagogues, love greetings in
narket-places, and are called of men, masters—
h practices Christ cried wo against; and they
walk in them, walk contrary to Scripture.
udge.—These are small things to speak of.
D.—There is nothing small which the Lord
mands. *Judge.*—Thou sayest well. (To the
t): What have you against these men. Produce
t you have against them, and I shall proceed
nst them according to law.
he papers which Dewsbury had written to the
tector being produced, W. D. gave some ac-
t of them—of his being taken by a warrant
ed for one that is called a Quaker, without
name—that they took from him those papers,
his money, which latter they returned. The Judge
ered the papers to be read, and when part was
l, directed them to give over, saying it is not
e published—but inquired of him, how durst
u write to him in such high language, as from
Spirit of the Lord? *W. D.*—They in whom
Spirit of the Lord is, write from the Spirit; and
that hath not the Spirit of Christ is none of his.
Judge.—But I fear it is not from the Spirit; for
ny pretend to the Spirit, and the divine light,
l revelations; but how shall we know they are
truth according to the Scriptures?
W. D.—The Scriptures cannot be known but
the pure divine light of Christ, which enlightens
ry one that comes into the world: of which pure
t Christ hath given to every one a measure, to
the spirits in them, whether they be of God or
. Every Spirit that confesses Christ is come in
flesh, is of God; but he that denies Christ is
ne in the flesh, is the spirit of anti-Christ. And
s light gave the Scriptures forth, which light leads
Christ, who reveals the Father to the soul which
es up to be guided by him. So the soul comes
know God by the revelation of Jesus Christ,
d they who walk in the Spirit are known by their
its in all their words and works. The prophet
nos had the Spirit of the Lord, and from the
irit declared the word of the Lord to the king of
rael, but the people could not bear his words.
Judge.—Thou speakest well, if thou dost as thou
yest; but this, it may be, will be expected, and
think it will be fair to give bail for your appear-
ce at the next assizes. *W. D.*—First make mani-
st what law we have transgressed, before bail be
quired.
In the evening they were called again, and their
ts directed to be taken off; but as they were
out to take off W. D.'s, the judge said, "let it be
," and bade them put on the hats of the others.
he judge then said to W. Dewsbury: "now I see
hat thou art, and thy vizard and form of fair
ords is seen, and thou art not the man thou pre-
endest to be." *W. D.*—Vizards and formality I
eny; but the power of God I own and witness, in
hich I stand and am subject to it, and to the or-
inance of man for conscience sake. *Judge.*—Now
ou art commanded; take off thy hat. *W. D.*—
Honour is not in pulling off the hat, but in obeying
he just commands of God, and my hat offends not
ny. They who are offended at it may take it off,
shall not resist them. But there is no scripture
that expresses any honour to be in putting off the
hat. *Judge.*—What! must we do nothing but what
is expressed in Scripture, for our apparel, what we
shall put on. *W. D.*—Yes, the Scripture saith, let
your adorning be with modest apparel. *Judge.*—
Art thou judge, that thou standest covered, and will
not uncover, as other prisoners do? *W. D.*—What
I do, God is my witness, I do it not in contempt of
any, but in obedience to the power of God, for con-
science' sake. *Judge.*—If you will not stand as
prisoners, I will not do anything concerning you;
but here I found you, and here I shall leave you.
W. D.—We have been above ten weeks in the low
jail, and no breach of any law found against us;
we stand subject to the power of God, whatever he
suffers thee to do with us.

Here the present examination ended. It shows not only the firmness, but the christian meekness with which Friends maintained their civil rights and their religious principles. Much depends upon the spirit and manner in which even a right cause is advocated, in order to carry conviction into the understandings of opponents, and to enlist the feelings and approbation of beholders. We are often struck with the unresisting suffering, with which they endured the gross contempt and abuse and cruelty poured upon them by unfeeling men. Would not the same glorious cause be better promoted in this day, than we fear it now is, if the same patient forbearing, yet uncompromising spirit, always actuated their professed successors in withstanding what they believe to be attempted inroads upon the ancient testimonies of truth held by those self-denying followers of Christ? Can we not believe it is possible for such to be brought to see their errors, and their dangers, if those who are professing to stand against the error, always acted under the clothing of a right spirit, which seeks to save that which has been deceived and got wrong?

Selected.

Ministry.

Samuel Bownas says, "I attended the Select Quarterly Meeting at Burlington, and was divinely opened with fresh matter setting forth the service of a spiritual ministry, which was free from all contrivance and forecast of the creature, in preparing itself either with former openings, or beautiful collections of texts or sayings from books or writings, all which gatherings would bring death, and could be no other in the best and most favourable construction, though well looked on by some, than the ministry of the letter, under pretence of the ministry of the Spirit, which is a deception of the highest nature."

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 365.)

ELIZABETH WHARTNABY.

In the years 1720, 1721, 1722, and 1723, no record remains to show that this dedicated Friend did more than attend the meetings within the limits of her own Yearly Meeting. In the Second month, 1724, she received a certificate of the unity of her Friends with her in a "weighty concern" she was under "to visit Friends in the love of God," on Long Island and there away." This service she performed to her own relief, and the satisfaction of Friends, returning her certificate in the following Seventh month.

She appears to have been permitted to rest quietly at home during the early part of the year 1725; but towards the close, she was liberated for service in Maryland, which she performed in company with Sarah Daws. In the First month, 1726, she gave Friends of the General Meeting of Ministers an account of her labours, and informed them of her prospect of attending the Yearly Meeting at Salem. In the same month, she obtained the unity of her Monthly Meeting in her visiting the meetings throughout Jersey and on Long Island.

A service of more magnitude pressed on her spirit, and in the Fourth month, 1727, she spread before her Monthly Meeting, a concern which she felt to pay a religious visit in Ireland, taking Barbadoes by the way. This weighty concern being freely united with by her friends, a certificate was prepared the following month, and having the approbation and certificate of the Yearly Meeting of Ministers in the Seventh Month, she sometime after sailed to Barbadoes. The Friends of her Monthly Meeting, after testifying in her certificate their unity with her ministry, and this prospect of labour, her orderly conversation and clearness of marriage engagement, conclude thus: "We sincerely desire her preservation and welfare by sea and land, and that she may, by the assistance of Divine grace, be enabled to perform her visit to the comfort of the faithful, and encouragement of the well inclined where it may be her lot to come." The certificate of the Yearly Meeting, after expressing full unity with her "ministry," "conversation," and "present undertaking," desires "the Lord may be with her, and support her by his Divine grace in all the exercises she may meet with in this her weighty undertaking."

She needed the sympathy of her Friends. After finishing her labours in Barbadoes, she took passage from thence for Belfast. Through the slow sailing powers of the vessel, or through an unusual amount of contrary winds, the voyage was a very long one. In addition to the length of the voyage, Elizabeth Whartnaby was very unwell, so that, on reaching Ireland, it seemed to the eye of reason doubtful if she could fulfil the prospect which had drawn her from her home. She arrived there some time in 1728, and through the merciful extension of strength vouchsafed, she, though in great weakness, was enabled to perform all her heavenly Father had laid upon her. When she was about returning homeward, she received some very affectionate and affecting testimonials of the love and unity of the brethren.

The Province Meeting, held at Lurgan on the 19th of Fifth month, 1729, says: "Our dear friend and sister, Elizabeth Whartnaby, after a tedious passage, landed at Belfast, and was brought by Friends to Lisburn. After some time of weakness and indisposition of body, she visited some meetings in this Province, and went from this place to the city of Dublin. She attended many meetings, and having returned to this Province, hath visited most of the meetings in these parts, although in much weakness of body, yet we may say, in great sweetness of spirit. Her visit hath been very acceptable, and she leaves us in true unity, humbly praying Almighty God to be with, and safely conduct her by the angel of his presence through this troublesome pilgrimage, and at last give her to inherit a crown of immortal glory."

The Friends at Dublin, after certifying that her labour and service had been acceptable and comfortable, add: "Her ministry being sound, attended with power and sweetness, to the edification of the churches." "Although she hath travelled in much weakness of body, yet, by the mercy and favour of God, she hath been preserved, cheerful and sweet in spirit." They add their fervent desires that through the gracious protection of Divine Providence she might have a comfortable voyage and safe return.

She reached Philadelphia, about the close of 1729, attending the Monthly Meeting in the Twelfth month. She was able to attend the Yearly Meeting of Ministers, in the Seventh month next year, and her account of her labours was acceptable and comfortable to the meeting. She appears to have never recovered her former health, and evidently was much confined at home, little trace of her being found after the Yearly Meeting this year. She kept a small shop in Market street, for a living, and the small legacy left her by Ralph Sandiford, may have added something to the outward comfort of her declining years.*

Her friends, after mentioning her labours in the gospel and service in America, and in Great Britain, Ireland, and the Island of Barbadoes, add: she "departed this life the 23d of the Second mo., 1734, in esteem and unity with Friends."

ELINOR DAVID.

Elinor David was the wife of Meredith David, of North Wales. She was a religiously concerned woman, and stood in the station of an elder, although for a short time before her decease, she had appeared in the ministry; her gospel labours, although in few words, were, her friends say, well received. They say: "She was concerned to evidence by her upright life and conversation, her regard for the promotion of the cause of Truth. She was a diligent attender of our meetings both of worship and discipline, and was of service therein. She had a religious concern on her mind for the education of her children in virtue and piety." "She departed this life well beloved and esteemed by us the —— day of Third month, 1734."

ROBERT FLETCHER.

Robert Fletcher, of the Falls Meeting, Bucks county, who deceased in the Third month, 1735, had been a very useful man in civil and religious society, filling the station of elder with acceptance. By his age and infirmities he appears to have been withdrawn from active life, some time before his heavenly Father saw meet to remove him from all the trials and vicissitudes of time.

MATTHEW CHAMPION.

Matthew Champion, of Burlington, who deceased Sixth mo. 12th, 1735, was an elder valued in his day, but of whose labours in civil or religious society we have little account.

MARTHA WOOD.

Martha Lloyd, daughter of John Lloyd, of Desart in Radnorshire, Wales, was born at that place about the year 1688. At what time she removed to America, we know not; but in the year 1717, we find her the wife of Thomas Wood, a valuable Friend and member of Abington Monthly and Particular Meeting. She was a woman of good parts, and having submitted to the cross of Christ, she became very useful in religious society. A gift of gospel ministry being dispensed to her, she endeavoured to exercise it in the fresh springing of life, and her labours met with the approbation of her Friends. She was first sent as a representative from the Meeting of Ministers at Abington, to the Quarterly Meeting of Ministers, in 1724.

From this time we have frequent trace of her, and of her labours, yet the only extensive religious service of which we find a record, is a visit to the meetings throughout New England, which she paid in 1729. Her diligence in attending to her appointments, was exemplary, and she seems to have been favoured with health until a week or two before her death, as appears by her presence at her Select Quarterly Meeting. Her decease took place on the 27th of the Sixth month, 1735.

ISAAC WILLIAMS.

Isaac Williams received a gift of gospel ministry, whilst a member of Gwynnedd Monthly Meeting, and was diligent in the performance of his religious duties. About the beginning of the year 1735, he removed to Middletown Meeting, Bucks county, taking with him a certificate of the full unity of Friends of Gwynnedd with his ministry. Middletown Friends say of him: "During his short residence amongst us, he approved himself a man of sobriety and orderly life and conversation, a diligent attender of meetings, and in the ministry lively and edifying." His decease took place about the close of the Seventh month, 1735.

(To be continued.)

Experiments with Cast Iron.—The interesting fact is developed by experiments of the U. S. Ordnance Department, that iron, by repeated fusion, up to a certain number of times, is thereby greatly improved in strength. Guns cast solidly, and those cast hollow, through which latter water was made to circulate after casting, showed an astonishing difference in their relative strength, the difference being in favour of the hollow-cast gun, which is attributed to the method of cooling, the solid gun, contracting from the outside, exerting a strain upon the arrangement of the particles of the metal in the same direction as the strain of the discharges. The experiments also showed that old castings are a great deal stronger than new. Eight-inch guns, proved thirty days after being cast solid, stood but 72 charges; thirty four days, 84 charges; one hundred days, 731 charges, and six years, 2,582 charges. This phenomenon is accounted for by supposing that the particles strained in the cooling readjust themselves in the course of time to their new position and become free or nearly so. These are important facts.

For "The Friend."

Christian Self-Denial.

The present and future happiness of individuals, as well as the welfare and comfort of society are greatly dependent upon the disinterested kindness of christian professors, by which they are led to "bear one another's burthens, and thus fulfil the law of Christ," who came into the world and took upon Him a body of flesh, in which he suffered and died, that we should not henceforth live unto ourselves, but unto Him who hath given himself a sacrifice for us, and both by example and precept taught us the salutary and necessary lesson of suffering for the brethren, as he hath suffered for us.

It is a sorrowful sight to behold in his professed disciples and followers, the disposition to seek their own in all their engagements, forgetting or disregarding the truth of the doctrine, that the members of Christ are one body, united in him as their only head; so that whether one member suffer all the members suffer with it, or whether one member rejoice, all the members rejoice therewith. In all our afflictions, He is afflicted, and he is partaker of all our rejoicings in Him, so that our interest as well as our duty, lies in the direction of the sacrifice of self for his sake, as well as for that of the brethren.

It is a wicked, though a very prevailing delusion, to believe that we are to consider ourselves before others, as a means of promoting our own happi while happiness is found, by christian experienc lie in the opposite direction; and the promi that he that watereth shall also be watered hi —that he that handeth even a cup of cold w to a disciple of the Lord, in the name of a disc shall receive a disciple's reward.

The world and its blessings were not mad serve the purposes of a favoured few, who m be able to grasp a superior share of earthly ric or who from undue parental indulgence, in the co of their home education, have been led to reg themselves as the first, if not the only objects wo of attention and favour, and, therefore, that t wants are at all times to be considered, how much others may be discomforted or inconvenie thereby.

It is a grievous mistake in parents to bring their children under the exercise of a false ten ness, whatever may be their relative circumstanc for selfishness of feeling and conduct are the alm inevitable and invariable result, by which wilfuln of disposition, and a disagreeable demeanour encouraged, to the discomfort of the child, wh every wish is indulged, and the annoyance of s ety wherever his or her lot may be cast. Child thus trained, under the influence of misplaced dulgence, are unfitted to bear the disappointme and trials of life with christian fortitude; and ev little cross to their wills and desires occasions fi fulness and murmurings, unpleasant and hurtful those around them.

It has appeared to me that no cross-bearin self-denying, and considerate parent, would guilty of thus unfitting a child to buffet with world, where crosses and disappointments are lot of all—of thus perverting the design of an wise Providence, whose will it is that we should taught in the school of suffering, patiently endure, cheerfully to submit, and quietly to until He may be pleased to deliver us from th trials and baptisms which are necessary to purification from all selfish desires, wayward positions, and wilful inclinations.

It is from no small measure of experience as w as observation and feeling in this matter, that I prompted thus to set forth the necessity of denial of *self*, which I deem the *greatest* enem of man's happiness inherent in him. It is indeed t root of all evil! and its influence over the mi should be guarded against with all the vigilance which we are made capable. It is an enemy christian love, joy and peace; and until it is root out of our hearts, we shall be hated and hatef the destroyers of our own, and others' peace; and u quiet and unhappy in every situation and relati of life. While this monster exists and is foster in our hearts, we shall find our hand to be again every man, and every man's hand against us. will make divisions in families, in the church, a in the world, for it is from our lusts that all co tention and strife, wars and fightings, do proceed. "If any man," said our blessed Redeemer, "w be my disciple, let him *deny himself*, take up t *daily cross* and follow me."

Seventh month 4th, 1856.

Christ was holy, humble, harmless, meek, merc ful, &c., when among men; to teach us what w should be, when he was gone; and yet he is among still, and in us, too, a living and perpetual preache of the same grace, by his Spirit in our conscience

Seek not to be rich, but happy; the one lies i bags, the other in content, which wealth can neve give.

* One of her advertisements in 1724, runs thus: "Elizabeth Whartnaby's right and genuine Spirit of Venice Treacle, truly and only prepared by her in Philadelphia, who was the original and first promoter of it in this city, is still sold by her at her shop in High street, near the market; as also the Spirit of Scurvy-grass."

le gratification;* he ascribes not good to any
re, but refers it entirely to God, from whom,
m its fountain, all good flows: in whom, as
centre, all saints will finally rest.

s an odd sight, but very evident, that families
nations, of cross religions and humours, unite
st those of their own, when they find an inte-
o do it.

THE FRIEND.

EIGHTH MONTH 2, 1856.

om different sections of our widely extended
ry, there are complaints heard of long continued dry weather. In some places the vegetation is said to be almost destroyed, and the farmers have abandoned the hope of having anything like an average yield of corn or potatoes. Culinary vegetables have stopped growing, and are withered and toughened by the heat, while the fruits which are usually in perfection at this season, are scarce and devoid of their native lusciousness.

It is common to speak of the independence of the farmer; but we think there are few avocations in which the helplessness of man and his entire dependence on an almighty Benefactor for the success of his labours, are more immediately and convincingly brought home, than in agriculture; and as it is the great secondary source of the sustenance and wealth of all other classes, so these latter are soon brought to sympathize with the farmer in his success or failure. All the discoveries of science, all the improvements or adaptations of mechanics, and all the increased facilities and appliances of art, valuable as they are in multiplying the powers of man, and in enabling him to lighten the labour with which he obtains his food by the sweat of his brow, all are vain unless the early and the latter rain are sent to refresh and water the earth, so that it may yield her increase. It is a great mercy that the drought is not universal, and that in many sections the crops of wheat, hay, &c., are reported to have been abundant, and the grass, corn, &c., to be kept vigorous and growing by timely soaking rains. The facility of transportation is now so great, and information of the state of the markets is so quickly transmitted from one State to another, that the deficiency in one part is not long in bringing a supply from another more favoured, so that the demand and supply are pretty nearly equalized, preventing famine prices cutting off the poor from the means of subsistence. This favourable condition of things would probably be destroyed, were the schemes of some of our politicians to dissever the Government, to be consummated. There is great cause to fear lest the evil passions of the people in the north and the south may be so excited as to precipitate them into measures that may result in dismembering the Union, and setting the two opposing sections in deadly strife with each other, a catastrophe, which, however flippantly spoken of by many, could hardly fail to prove the source of unnumbered evils, from which we are now exempt, and so far from hastening the downfal of slavery, would more probably fasten it on those now suffering from it, beyond the possibility of human wisdom or power to remove or ameliorate it.

The Christian, believing in the government of an almighty Superintending Providence, and the accountability of men collectively as well as individually, sees that the iniquities of the people are bringing correction upon them, and that amid the undeserved mercies showered upon us, the rod is to be discerned, held forth in rebuke, and threatening more severe chastisement unless the people are willing to learn wisdom, and cease from the evil of their ways. The great object which we should keep in constant remembrance, is the obligation we are under to show gratitude and obedience to Him, who "turneth the wilderness into a standing water, and dry grounds into water springs; and there He maketh the hungry to dwell that they may prepare a city for habitation; and sow the fields, and plant vineyards, which may yield fruits of increase. He blesseth them also, so that they are multiplied greatly, and suffereth not their cattle to decrease. Again they are minished and brought low through oppression, affliction and sorrow." "Whoso is wise and will observe these things, even they shall understand the loving-kindness of the Lord."

SUMMARY OF EVENTS.

EUROPE.—Liverpool dates to Seventh mo. 16th. The news is mostly unimportant. American affairs were discussed by the English papers in a milder tone than heretofore. A serious riot had occurred among the militia at Nenaugh, Ireland, on the 16th, and two or three succeeding days, caused by alleged bad faith on the part of the Government towards them. They had been ordered to disband and give up their clothing and arms, which they refused to do, but instead broke open the magazine, and seized ammunition. The regular troops were called in to suppress the riot, and disarm the militia, which was effected without much loss of life. In Parliament, Lord John Russell's motion, in relation to Italian affairs, was negatived. The spinning mills of Joseph Ainsworth, at Bolton, had been destroyed by fire. They contained 8000 spindles.

RUSSIA.—An imperial ukase extends the amnesty accorded to the refugees of the western governments of Russia, to individuals who took part in the events of 1830 and 1831. No judicial proceedings can be instituted against them, and on taking an oath of fidelity to the sovereign, their rights will be restored to them, with the capacity of holding government employment after three years' good conduct. A good harvest was expected in Russia.

SPAIN.—The cholera has appeared at Seville. The disturbances which prevailed in some parts of the kingdom, have been suppressed. Espartero has tendered his resignation.

FRANCE.—The regency bill was unanimously voted by the Senate on the 9th. The grape disease is said to be very serious in a part of the south of France. The Viceroy of Egypt has given 30,000f. for the sufferers by the late inundations in France.

ITALY.—Affairs are said to be critical in Parma. Lord Normanby had gone there from Florence, and had several interviews with the Minister of Foreign Affairs, with the Austrian General, and with the Duchess herself.

Liverpool Markets.—The cotton market was unchanged, with a moderate demand and firm prices. New Orleans fair was quoted at 7*d*. Upland, middling, 6 3-16*d*. The weather had been stormy, and breadstuffs were a shade higher, with moderate sales.

London.—The bullion in the Bank of England had decreased £450,000. American stocks were firm, with an upward tendency. Consols, 95¼.

MEXICO.—The latest news from Mexico state that the opponents of Comonfort's government at Puebla had attempted a revolution, but their plans being discovered, were frustrated, and a number of the offenders were arrested. With this exception, the country was quiet. Gold in large quantities is reported to have been discovered in the Province of Guerero.

NICARAGUA.—Walker was inaugurated as President on the 12th ult. Ex-President Rivas remained in possession of Leon. Many of the natives consider the inauguration of Walker as an act of usurpation, and have declared against him. There was much sickness among Walker's troops, and frequent desertions. An invasion from the Northern Central American States was looked for at the close of the rainy season.

UNITED STATES.—*Congress.* — Both Houses have agreed to adjourn on the 18th proximo. It was not expected that the Senate and House would agree on any plan for the pacification of Kansas, at this session. The Senate has passed several bills for the improvement of rivers and harbours in the South and West, and some of the appropriation bills; also a bill for the protection of citizens of the United States who may discover deposits of guano. The bill provides that whenever any citizen of the United States shall discover new guano islands, &c., not occupied by persons of any other government, and occupy the same, they shall be considered as appertaining to the United States. Discoverers are to be allowed the exclusive right of selling and delivering guano, and shall be allowed to receive $8 per ton when delivered at the vessel, and $4 at the place of deposit. The guano is only to be sold to citizens of the United States; any breach of these privileges to cause a forfeiture of rights; the land and naval forces of the United States to protect such islands, and the laws of the United States to be extended over them. The President has recommended an appropriation of $250,000 for the purchase of a building in Philadelphia for a post-office, and $50,000 for fitting up the same. The Pennsylvania Bank building on Second street has been contracted for. In the House but little business has been done, the time being occupied with party speeches, into which Kansas and the slavery question largely enter. An amendment to the army appropriation bill made in the House, declares that the President shall not employ any of the military in enforcing the laws of the present territorial government of Kansas.

This amendment will of course be rejected by the Senate, but the House may refuse to pass the bill without it.

Kansas.—It is stated that Col. Lane had entered the territory at the head of 600 free State men, fully armed, and had returned for another regiment. On the 8th ult. Gen. Stringfellow and others issued a handbill calling on the Missourians to go over to Kansas promptly, so as to be prepared to vote at the November election, under the Senate bill, the passage of which was then anticipated.

California.—An arrival at New York on the 27th ult., brought the California mails to the 5th, and $1,650,000 in treasure. The State authorities had apparently determined to make no further resistance to the Vigilance Committee, which had proceeded to still bolder acts of usurpation. They had seized the arms of the State, collected for the use of the law and order party, and had arrested one of the Judges of the Supreme Court, for resisting a process issued by this secret oligarchy. It would seem that the supremacy of the law cannot be restored without the interference of the Federal Government. The crops were said to be abundant, and the new wheat received at San Francisco was of excellent quality. A shipment of 20,000 barrels of flour was about being made to Australia.

Oregon.—The force under Col. Buchanan, had a battle with the Indians at the Big Meadows, in which ten whites and forty Indians, including several chiefs, were killed. The grasshoppers had been very destructive in the Willamette Valley.

New York.—Mortality last week, 631. The increased mortality is attributed to the great heat of the weather. No epidemic prevails.

Philadelphia.—Mortality last week, 426. More than three-fourths of the deaths were of children, 95 of whom died from cholera infantum. The interments also include a portion of the victims of the railroad disaster.

The Railroad Disaster.—To the 28th ult., the ascertained loss of life by the collision on the North Pennsylvania Railroad, amounted to 67 persons. It was expected the maimed and wounded, who were then living, would nearly all recover. The Coroner's inquest held in Montgomery county, on a portion of the victims, attributes the collision to the gross carelessness of the conductor of the excursion train, in running his train contrary to the instructions. The inquest in Philadelphia came to a similar conclusion, but they also consider the management of the road deficient in proper precautions for the safety of passengers, when excursion trains are sent upon it.

The Northern Indiana.—More bodies have been recovered from the wreck, and it is now believed that at least forty persons perished by the burning of the boat.

Unusual Drought.—During the present summer, much less than the usual quantity of rain has fallen in the Middle States and a portion of the west and north. As a consequence it is expected the late crops will be seriously curtailed in all that region. Last week there were but twenty-two inches of water in the channel of the Ohio at Fallsburg. In many places small springs but considerable running streams have been dried up. Fires were recently raging on the mountains west of Cumberland, Md., and the forests were burning, on the south side of the New York Central Railroad, between Buffalo and Batavia, for the distance of twelve miles.

Maine Law in Iowa.—A bill was introduced in the Iowa Legislature, now in session, to repeal the law prohibiting the sale and manufacture of liquor in that State. It passed the Senate by a strict party vote. Democrats all for, and Fremont men against. It was defeated in the House by a party vote, the Republicans all voting against it.

Mississinawa.—Russian Sympathy.—A subscription has been opened in St. Petersburg, on behalf of the sufferers by the late inundations in France.

Dredging the St. Lawrence.—The work of deepening the St. Lawrence between Quebec and Montreal, Canada, is making satisfactory progress. The principal field of operation is Lake St. Peter.

A Water Spout.—The brig Anna, Capt. Kimball, of Bucksport, from Aspinwall for Pedro Banks, where she was bound for a cargo of guano, was struck by a water spout, and capsized on the 25th of Sixth mo. The captain's son and three seamen who were below at the time, were drowned.

Losses of France in the War.—The official statement of the losses of the French army, during the war with Russia, makes the whole number amount to 62,500; though it is suspected that this is very much below the true mark.

The Populations of Cuba, is estimated at the present time at about 1,300,000. Of these 650,000 are white, 750,000 slave black, and about 200,000 free black.

Prohibition.—The Legislature of New Brunswick has repealed the Prohibitory Liquor Law, by a vote of 38 to 2, and revived the license law.

The Suez Canal.—The European Commission of Engineers, assembled in Paris to discuss the details of the plan for cutting across the Isthmus of Suez, have adopted the plan of a direct canal from Suez to the Mediterranean at Pelusium, across the Bitter Lakes. The canal will be fed with sea water.

American Machines in England.—The Illustrated News, of London, announces that it has contracted for one of Hoe & Co.'s great printing machines. The London Times has also ordered one larger than any yet made; it is to have ten printing cylinders. Two other printing establishments in London have also given orders for these machines.

Coal and Wood for Locomotives.—The Illinois Central Railroad Company have been trying an experiment in running their engines. In running 109 miles, the following result was obtained: Wood, 5 cords at $5.75, $28.75; coal, 52 bushels, at 15 cents, $7.80—saving with coal, $20.95.

South Carolina Law.—M. M. Chaney, convicted of negro stealing, was hanged at Lancasterville, S. C., on the 11th ult., and on the same day, Moses Gossett was executed for the same offence at Unionville, S. C.

EVENING SCHOOLS FOR ADULT COLOURED PERSONS.

Wanted, A Principal and three Assistant Teachers for the Men's School, and a Principal and four Assistants for the Women's School.

Application may be made to either of the undersigned.

JOHN C. ALLEN, No. 179 S. Fifth street.
SAMUEL ALLEN, No. 134 S. Front street.
WILLIAM L. EDWARDS, No. 37 Arch street.

WANTED.

A Suitable Female Teacher to take the place of Principal in the Select School for Girls, in this city.

Application may be made to Sidney Coates, No. 330 Arch street, or Elizabeth Allen, No. 146 Pine street.

WANTED.

A Female Teacher is wanted for Friends' School at Crosswicks, N. J. Early application may be made to

JOEL H. MIDDLETON, Crosswicks, N. J.,
Or, SAMUEL ALLINSON, Jr., Yardville, N. J.

DIED, at Hopkinton, R. I., on the 24th of Fifth month last, THOMAS FOSTER, an elder of South Kingstown Monthly Meeting, in the 53d year of his age. The character of this beloved Friend was marked by genuine piety and circumspection, and by strict integrity in his transactions with his fellow men; being concerned above all to do the will of his Heavenly Father, so as to stand accepted in the Beloved. As a husband and father he was most affectionate and kind, endeavouring to discharge his duty, not only in these relations, but also to stand clear of the blood of all men. A striking feature in his character was a forgiving disposition. For many years he occasionally appeared in public testimony to the satisfaction of Friends. He was troubled with a severe cough from early life, at times occasioning much suffering and loss of sleep, which he endured with exemplary patience. For a year previous to his death he was aware that his constitution was giving way, and often spoke of it. In the Second month, being exposed to rather severe weather, in going to attend the Quarterly Meeting, he was attacked by lung fever, which terminated in consumption. He was apprehensive that he should not recover, and did not appear anxious as to the result; but subsequently said: "At the commencement of my illness, in viewing death so near, I feared I should not be ready, and felt distressed in my mind, but was finally enabled to resign myself entirely up into the hands of my Saviour. Here I lay for two months, feeling peaceful and quiet, but had not that certain evidence of being accepted which I desired. At the end of this time my Saviour assured me that my sins were all blotted out, and a mansion prepared for me in his blessed kingdom—and that He would be with me and preserve me unto the end." He related this to his wife, in much brokenness of spirit, saying: "My heart overflows with gratitude, my Saviour has done so much for me; more than I could ask or think for such a poor creature as I am. It is all of His mercy: it is wonderful that He should, so at once, blot out all my sins and receive me into his arms—filling my mind with love and praise. I have not words to express the joy and happiness which I feel; it is *beyond human conception!* I now know my sins have all gone beforehand to judgment." He lived more than five weeks after this, continuing to feel the same blessed assurance to the end. His family being called together, he addressed his father-in-law, John Wilbur, saying: "I have great sympathy with thee from the first, in the trials connected with the troubles in our Society, a portion of which have fallen to thy lot. I believe thou hast been contending for the cause of Truth, and thou wilt not let in discouragement." To his wife and children he said: "I want you to give me up free! I not suffer any despondency to cover your minds, for is no cause for discouragement if you are only t I want you, dear children, to take up the cross in the morning of your day, and be watchful and the don't look too much upon the dark side of this; look steadily to Him who will support you and car through the deepest affliction, and enable you to in the light." He had much to impart that was tive, but most of his work was praise—saying mor once—"my heart is filled with praise from morni evening and from evening till morning,"—sometim pearing vocally in praise and thanksgiving to the His cough was so troublesome much of the time, could get little rest except in a sitting posture days and nights he sat up in a chair. He endured all with patience; not a murmur or co escaped him. He would often say that his suf were as nothing—that the Lord supported him in marvellous manner that all was made easy. you," said he, "to help me praise my Saviour goodness and mercy to the children of men. I washed away all my sins, and when my mess suffering is filled up, he will receive me into his kingdom, where I shall forever sing the song of and the Lamb, with the ransomed and redeemed generations. The enemy is not suffered to tempt I never had any conception of such happiness it cannot be conveyed by words; then what m fulness be?" He often requested to hear portion Psalms read, particularly where so much is said in the Lord, saying he never comprehended so well be feelings of the Psalmist. He recommended to his frequent inward retirement and reflection, adding, is plenty of time for it; I have had many good in the field, wherein my intercessions have often raised to the Father of mercies for you, my dear ch that you might be preserved in the Truth." respecting his outward affairs was taken away; times he would say, "I am prepared to go and the time to come;" but generally finished by "the Lord's will is my will, and his time is the time." He exhorted Friends to faithfulness in testimonies, speaking particularly of the import attending all their meetings, both for worship discipline, encouraging to greater diligence there referring to our ancient Friends, how much they for these precious testimonies, and how little we dured in comparison with them; saying, no fear of dread of suffering kept them from their although often taken from them and carried into some dungeons and prisons, where many ende lives. It was very instructive to witness the cal rance in the Saviour's promises, which constan vailed and sustained his spirit above all this. Not a doubt appeared to be permitted to distu At one time he said: "The enemy was around night, trying to look in; I applied to my Saviour fled away. He promised me when he appeared that the enemy should have no power over me, to rise to him, and he will fulfil his promises, for yea and amen forever." He then added: "Th may truly be called an unwearied adversary; he follows me to this late period." To his wife "Thou art the nearest to me of anything in thi thou and the dear children never felt so near bef my love so extends to the whole human family, th as if I could enclose all in my arms; but though you so much, there is One I love more and whos to be with." He then said, "I think I shall be from saying much more; my work is done; what I do now if it were not so?" The next day he quiet and still, apparently pretty comfortable. his nance bearing the impress of heavenly serenity. wife's saying to him, "Thou looks very happy," plied, "I am." He requested those about him to saying, "I want to pass quietly away." He la quiet and comfortable state until about 5 o'clo when he asked to have his pillows changed, fro time he breathed shorter and shorter for about minutes, when, without a struggle, he passed a have no doubt, to the heavenly mansion which seen prepared for him.

"Knowledge is Power."

(Continued from page 370.)

re is an old proverb, that "When two men n one horse, one man must ride behind." ll and Labour are, as we think, destined to n a journey together to the end of time. We hown how they proceed on this journey. We hown that, although Labour is the parent of alth, its struggles for the conversion of the upplies of nature into objects of utility are eeble in their effects till they are assisted by ulation. Before the joint interests of Labour apital were at all understood, they kept sepa- when they only began to be understood, as ill show, they were constantly pulling differ- ays, instead of giving "a long pull, a strong and a pull altogether;" and even now, when interests in many respects are still imperfectly stood, they occasionally quarrel about the tions upon which they will continue to travel mpany. In the very outset of the journey, ar, doubtless, took the lead. In the dim morn- society, Labour was up and stirring before al was awake. Labour did not then ride; he led slowly on foot through very dirty ways. al, at length, as slowly followed after, through me mire, but at an humble distance from his t. But when Capital grew into strength, he hat there were quicker and more agreeable s of travelling for both than Labour had t out. He procured that fleet and untiring Exchange; and when he proposed to Labour they should mount together, he claimed the , and kept it, for their mutual benefit, of taking irection of the horse. For this reason, as it ars to us, we are called upon to assign to one e companions, according to the practice of the Knights Templars, the privilege of sitting be- the other—holding the reins, indeed, but in all cts having a community of interests and an lity of duties, as well as rights, with his fel- traveller.

et us endeavour to advance another step, in the tration of these positions, by going back to the igal who had spent all his substance. Let us ey him at the moment when he had made the , and in many respects heroic, resolution to from the condition of a consumer into that of oducer. The story says, "The first thing that r his attention was a heap of coals shot out of a on the pavement before a house. He offered self to shovel or wheel them into the place re they were to be laid, and was employed."

Here, then, we see that the labour of this man was wholly and imperatively directed by accumulation. It was directed as absolutely by the accumulation of others as the labour of Dampier's Mosquito Indian was directed by his own accumulation. The Indian could not labour profitably—he could not obtain fish and goats for his food, instead of seal's flesh—till he had called into action the power which he possessed in his knife and his gun-barrel. The prodigal had no accumulation whatever of his own. He had not even the accumulation of peculiar skill in any mode of labour; for a continual process of waste enlarges neither the mental nor physical faculties, and generally leaves the wretched being who has to pass into the new condition of a producer as helpless as the weakest child. He had nothing but the lowest power, of labouring without peculiar knowledge or skill. He had, however, an intensity and consistency of purpose which raised this humble power into real strength. He was determined never to get backward, always to go on. He knew, too, his duties as well as his rights; and he saw that he must wholly accommodate his power to the greater power which was in action around him. When he passed into the condition of a producer, he saw that his powers and rights were wholly limited and directed by the principles necessary to advance production; and that his own share of what he assisted in producing must be measured by the laws which enabled him to produce at all. He found himself in a position where his labour was absolutely governed by the system of exchanges. No other system could operate around him, because he was in a civilized country. Had he been thrown upon a desert land without food and shelter, his labour must have been instantly and directly applied to procuring food and shelter. He was equally without food and shelter in a civilized country. But the system of exchanges being in action, he did not apply his labour directly to the production of food and lodging for himself. He added by his labour a new value to a heap of coals; he enabled another man more readily to acquire the means of warmth; and by this service, which he exchanged for "a few pence" and "a small gratuity of meat and drink," he indirectly obtained food and lodging. He conferred an additional value upon a heap of coals, and that additional value was represented by the "few pence" and "a small gratuity of meat and drink." Had the system of exchange been less advanced, that is, had society been less civilized, he would probably have exchanged his labour for some object of utility by another and a ruder mode. He would have received a portion of the coals as the price of the labour by which he gave an additional value to the whole heap. But mark the inconvenience of such a mode of exchange. His first want was food; his next, shelter. Had he earned the coals, he must have carried them about till he had found some other person ready to exchange food and lodging for coals. Such an occurrence might have happened, but it would have been a lucky accident. He could find all persons ready to exchange food and clothes for money, because money was ready again to exchange for other articles of utility which they might require, and which they would more readily obtain by the money than by the food and clothes which our labourer had received for them. During the course of the unprofitable labour of waiting till he had found an exchanger who wanted coals, he might have perished. What, then, gave him the means of profitable labour, and furnished him with an article which every one was ready to receive in exchange for articles of immediate necessity? Capital in two forms. The heap of coals was capital. The coals represented a very great and various accumulation of former labour that had been employed in giving them value. The coals were altogether valueless till labour had been employed to raise them from the pit, and to convey them to the door of the man who was about to consume them. But with what various helps had this labour worked! Mere manual labour could have done little or nothing with the coals in the pit. Machines had raised them from the pit. Machines had transported them from the pit to the door of the consumer. They would have remained buried in the earth but for large accumulations of knowledge, and large accumulations of pecuniary wealth to set that knowledge in action by exchanging with it. The heap of coals represented all this accumulation; and it more immediately represented the circulating capital of consumable articles of utility, which had been paid in the shape of wages at every stage of the labour exercised in raising the coals from the mine, and conveying them to the spot in which the prodigal found them laid. The coals had almost attained their highest value by a succession of labour, but one labour was still wanting to give them the highest value. They were at their lowest value when they remained unbroken in the coal-pit; they were at their highest value when they were deposited in the cellar of the consumer. For that last labour there was circulating capital ready to be exchanged. The man whose course of production we have been tracing imparted to them this last value, and for this labour he received a "few pence" and a "gratuity of meat and drink." These consumable commodities, and the money which might be exchanged for other consumable commodities, were circulating capital. They supplied his most pressing wants with incomparably more readiness and certainty than if he had been turned loose among the unappropriated productions of nature with unlimited freedom and absolute rights. In the state in which he was actually placed, his rights were limited by his duties; but this balance of rights and duties was the chief instrument in the satisfaction of his wants. Let us examine the principle a little more in detail.

An exchange was to be carried on between the owner of the coals and the man who was willing to shovel them into the owner's cellar. The labourer did not want any distinct portion of the coals, but he wanted some articles of more urgent necessity in exchange for the new value which he was ready to bestow upon the coals. The object of each exchanger was, that labour should be exchanged with capital. That object could not have been accomplished, or it would have been accomplished slowly, imperfectly, and therefore unprofitably, unless there had been interchangeable freedom and security for both exchangers—for the exchanger of capital and

the exchanger of labour. The first right of the labourer was, that his labour should be free; the first right of the capitalist was, that his capital should be free. The rights of each were built upon the security of property. Could this security have been violated, it might have happened, either that the labourer should have been compelled to shovel in the coals, or that the capitalist should have been compelled to employ the labourer to shovel them in. Had the lot of the unfortunate prodigal been cast in such a state of society as would have allowed this violation of the natural rights of the labourer and the capitalist, he would have found little accumulation to give a profitable direction to his labour. He would have found production suspended or languishing. There would probably have been no heap of coals wanting his labour to give them the last value; for the engines would have been idle that raised them from the pit, and the men would have been idle that directed the engines. The circulating capital that found wages for the men and fuel for the engines, would have been idle, because it could not have worked with security. Accumulation, therefore, would have been suspended; and all profitable labour would, in consequence, have been suspended. It was the unquestionable right of the labourer that his labour should be free; but it was balanced by the right of the capitalist that his accumulation should be secure. Could the labour have seized upon the capital, or the capital upon the labour, production would have been stopped altogether, or in part. The mutual freedom and security of labour and capital compel production to go forward; and labour and capital take their respective stations, and perform their respective duties, altogether with reference to the laws which govern production. These laws are founded upon the natural act of the system of exchange, carrying forward all its operations by the natural action of the great principle of demand and supply. When capital and labour know how to accommodate themselves to the direction of these natural laws, they are in a healthy state with respect to their individual rights, and the rights of industry generally. They are in that state in which each is working to the greatest profit in carrying forward the business of production.

The story of the prodigal goes on to say, "He then looked out for the next thing that might chance to offer; and went with indefatigable industry through a succession of servile employments in different places, of longer or shorter duration." Here we see the principle of Demand and Supply still in active operation. "He *looked out* for the next thing that might chance to offer." He was ready with his supply of labour immediately that he saw a demand for it. Doubtless the "indefatigable industry" with which he was ready with his supply created a demand, and thus he had in some degree a control over the demand. But in most cases the demand went before the supply, and he had thus to watch and wait upon the demand. In many instances demand and supply exercise a joint influence and control, each with regard to the other. Pliny, the Roman naturalist, relates that in the year 454 after the building of Rome (300 years before Christ) a number of barbers came over from Sicily to shave the Romans, who till that time had worn long beards. But the barbers came in consequence of being sent for by a man in authority. The demand here distinctly went before the supply; but the supply, doubtless, acted greatly upon the demand. During a time of wild financial speculation in Paris, created by what is called the Mississippi bubble, a hump-backed man went daily into the street where the stock-jobbers were accustomed to assemble, and earned money by allowing them to sign their contracts upon the natural desk with which he was encumbered. The hump-back was doubtless a shrewd fellow, and saw the difficulty under which the stock-jobbers laboured. He supplied what they appeared to want, and a demand was instantly created for his hump. He was well paid, says the story. That was because the supply was smaller than the demand. If other men with humps had been attracted by the demand, or if persons had come to the street with portable desks more convenient than the hump, the reward of his service would naturally have become less. He must have yielded to the inevitable law by which the amount of circulating capital, as compared with the number of labourers, prescribes the terms upon which capital and labour are united.

(To be continued.)

Epistle of George Fox.

Whilst I was kept in Lancaster jail, I was moved to give forth the following paper, "for staying the minds of any such as might be hurried or troubled about the change of government:"—

All Friends, let the dread and majesty of God fill you! And as concerning the changing of times and governments, let not that trouble any of you; for God hath a mighty work and hand therein. He will yet change again until that come up, which must reign; in vain shall powers and armies withstand the Lord, for his determined work shall come to pass. But it is just with the Lord that what is now come up should be so, and he will be served by it. Therefore, let none murmur, nor distrust God; for he will provoke many to zeal against unrighteousness, and for righteousness, through things which are suffered now to work for a season; yea, many whose zeal was even dead, shall revive again, shall see their backslidings, and bewail them bitterly. For God shall thunder from heaven, and break forth in a mighty noise, his enemies shall be astonished, the workers of iniquity confounded, and all that have not the garment of righteousness shall be amazed at the mighty and strange work of the Lord, which shall be certainly brought to pass. But my babes, look ye not out, but be still in the light of the Lamb; and he shall fight for you. The almighty Hand, which must break and divide your enemies, and take away peace from them, preserve and keep you whole, in unity and peace with itself, and one with another. Amen. 1660. G. F.

For "The Friend."

Daily Example.

It is peculiarly congenial with the spirit of universal love, to meet with evidences that true christians of different names, though they may not have been instructed so as to see alike in all points, have nevertheless similar desires for the extension of the Redeemer's kingdom, and to experience in themselves the renovating power of His grace. One says, "'except the Lord build the house, they labor in vain who build it.' What a privilege it is to be allowed to co-operate, in the least degree, in the great work of bringing this world to the love and service of our blessed Redeemer! As we advance in life, may we have a more single eye to the glory of God *in all we do, in all we desire*, and *in all we feel*. May we have deeper and more affecting views *of the value of the soul*, and of the unspeakable and incomprehensible value *of the price which has been paid for its ransom*. I often feel that my days are rapidly passing, and that I have but a few remaining. But these remaining days are precious days, if they should be spent for the cause of Christ. And what an unspeakable privilege is it to indulge a hope that when our work is done, through infinite
we may be admitted to dwell forever with the

years before the above was penned, the writer
"I believe I have never before realized the so
ty of living, so much as I do this summer.
think that if possible, it is more solemn to liv
to die. What important consequences may d
on a *single word*, or on the *most trifling*
With how much care and deliberation shou
regulate *all our conduct*, and even *our every tho*
This requires the most vigorous exertion of
faculties; nay, more, we need constant instr
from heaven, and *the daily guidance of the*
Spirit." This was an excellent beginning, an
doubtless followed by good fruits. Great wi
ness abounds in the earth, and calls for unrem
labour in the disciples of Christ. They ough
to forego their confidence in Him. "I will giv
the heathen for thine inheritance, and the uttr
parts of the earth for thy possession." The
is going on, and while many are resisting his
and power, others are brought to bow to Him
great changes have been and are being wrou
christendom, and in the nations afar off.

Idol Worship in San Francisco.

[It would hardly have been credited a few
ago, that Idol worship would have been introd
and practised in this country, but from the ac
given below, which is taken from "The Sp
Missions," it appears to have been imported to
with the Chinese into California, and to be
lished there with other abominations which
have introduced. What with Paganism and
monism we think the missionaries may find en
work without going far from home.]

In one of the streets of this city is a plain
building, bearing on its front a Chinese inscri
and under it, (probably the translation,) the w
"See Yup Asylum, 1853." It is not more
twenty feet wide, and seems to be the only ent
to a wide passage, which leads into the mo
tensive buildings, in the centre of the square
is the hospital and club-house of one of the
great companies which import emigrants fro
"Flowery Land," and where, I believe, they
a place of meeting and association while in the

sugar or milk. The Chinamen (for no
were present) were all in their holiday suits,
de every effort to be polite and attentive to
sitors.
he story above we were shown the temple
he worship is held. It is a room about forty
g, at one end of which the idol—a superbly
painted and gilded wooden figure, life-size
seated on an elevated throne, surrounded
ll the decorations which Chinese ingenuity
devise. Before him was a high altar, cov-
ith offerings, in the shape of provisions. On
e red wax candles, covered with emblems,
urning, and incense was fuming up from the
urns. Through the centre of the room was
table, covered, like the altar, with every con-
le delicacy in the Asiatic style: dried and
ruits of all kinds, cakes, wines and tea. The
ere cooked whole, their heads gilded, and
ns and tails painted gaudy colours. The birds
standing up in the attitudes of life. The
of the table was filled with a hog, some four
ng, roasted whole. The entire feast, indeed,
a beautiful appearance, and showed that a
e dinner-table, from the ingenuity of the
, must be a very picturesque affair.
temple was hung round with gorgeously
d and gilded wood; inscriptions in every
y of colour; flags and picturesque transpa-
naps. It was, indeed, superbly furnished:
s the decorations were entirely Oriental, they
nlike any thing we had seen before. They
d to have collected about their wooden god
paraphernalia of a prince. The articles on
ltar and table, we were told, were presents
wealthy Chinamen in this city.
ere were nine Chinese who seemed to act as
, and were distinguished by their elegant
s. Their robes of the richest blue silk, flowed
floor, while their caps were surmounted by
lls. Two of these seemed to have the supe-
y of rank. He who acted as high-priest
d himself at the end of the altar, two others
d themselves before it, while the remaining
ok their stand in the lower part of the hall,
the huge candles and incense vases burning
end of the long central table.
en commenced the service. The high-priest
d a few words in a kind of discordant, nasal,
tive way, to which the others responded;
the band in the next room, opening into the
temple, gave a flourish of their horrible music. Then, at every sentence, the second priest at the end of the hall prostrated himself till his forehead touched the floor. Then the whole six would bow their heads equally low. Then they would march in procession up and down the hall and round the table, chanting in a monotonous tone. At one time they knelt before the table, and various gifts were handed to the priest, which he elevated as if offering them, and then bowing to the floor, placed them on the table. It seemed a kind of consecration of them to the idol. Then the provisions on the altar, at the god's feet, were subjected to the same process, together with cups of rice, and tea, and wine. Then sandal-wood was thus offered, which was afterwards burned in the incense vase.

The large window at the lower end of the hall was open to the floor; and, at signals given during different parts of the service, a small cannon was discharged in the yard below, followed by a most deafening noise of fire-crackers. These last occupy an important place in all Chinese ceremonies; and, during their festivals, the part of the city where they most live, is resounding all day and night with the noise. Towards the close of the service they all knelt, and one of their number read aloud the contents of several sheets of red tissue paper, before the idol. These were prayers, which were immediately afterwards burned in a furnace outside the door of the room, this being the Chinese method of offering them. The whole service lasted almost an hour, and was thus made up of genuflections, bowings, prostrations, processions, and chants, to us, of course, utterly unintelligible. It was apparently confined to the priests; for the Chinese who were crowded around, filling the hall, seemed to look on just as the spectators did, and evinced no more interest in the proceedings. The whole affair concluded with repeated prostrations by all the nine priests, and we went home with splitting headaches from the heavy oppressive atmosphere of the temple, the air of which was loaded with incense.

There was one fact with which I was forcibly struck. It was the great resemblance in outward appearance to many services of the Romish Church, which I have seen. Take some grand service in St. Peter's, at Rome, and substitute the pope on his throne for the idol on his high seat, and except the prostrations were not *quite* so low as to bring the forehead to the floor, there were apparently the same bowings, and kneelings, and processions, and chantings. I believe that a Chinese, looking at a Romish service in the presence of the pope, would be struck with its resemblance to his own.

Yet, who would imagine that such a scene could be witnessed in this city! The worship of a god of wood in this nominally christian land, where, within a mile, twenty congregations who "profess and call themselves Christians," are accustomed to assemble for the worship of the One True God!—*Bishop Kipp.*

We Die Daily!—The bodies of animals are continually undergoing a series of invisible changes of substance, of which they are entirely unconscious We look at our hand to-day, as we write, and we fancy it is the same in substance as it was yesterday, or last year—as it was ten years ago. The form of each finger, of each nail, is the same. Scars made in our infancy are still there. Nothing is altered or obliterated; and yet it is not the same hand. It has been renewed over and over again since the days of our youth. The skin, and flesh, and bone, have been frequently removed and replaced. And so it is, more or less with our whole body. The arms and limbs that sustained us in our schoolboy struggles are long since consigned to the dust; have perhaps lived over again more than once in plant, or flower, or animal. In from three to five years the entire body is taken out and built in again with new materials. A continued activity prevails among the living agencies to which this hidden work is committed. Every day a small part is carried away; just as if a single brick were every day taken out of an old wall, or a single wheel out of a watch, and its place supplied by another. The body, therefore, requires constant supplies, at every period of its life, of those things of which its several parts are built up.

From the Journal of George Fox.

True religion is the true rule, and right way of serving God; a pure stream of righteousness flowing from the image of God, the life and power of God, planted in the heart and mind by the law of life, which bringeth the soul, mind, spirit and body to be conformable to God, the Father of spirits, and to Christ; so that they come to have fellowship with the Father and the Son, and with all His holy angels and saints. This religion is from above, pure and undefiled before God, leads to visit the fatherless, widows and strangers, and keeps from the spots of the world. This religion is above all the defiled, spotted religions in the world, that keep not their professors from defilements, but leave them impure, below, and spotted; whose fatherless, and widows, and strangers, beg up and down the streets.

1660. G. F.

The Philosophy of Sneezing.—A sneeze always indicates that there is something wrong. It does not occur in health unless some foreign agent irritates the membranes of the nasal passages, upon which the nervous filaments are distributed. In case of cold, or what is termed influenza, these are unduly excitable, and hence the repeated sneezing which then occurs. The nose receives three sets of nerves; the nerves of smell, those of feeling, and those of motion. The former communicate to the brain the odorous properties of substances with which they come into contact, in a diffused or concentrated state; the second communicate the impression of touch; the third move the muscles of the nose—but the power of these muscles is very limited. When a sneeze occurs, all these faculties are excited in a high degree. A grain of snuff excites the olfactory nerves, which despatch to the brain the intelligence that "snuff has attacked the nostril!" The brain instantly sends a mandate through the motor nerves to the muscles, saying "cast it out!" and the result is unmistakable. So offensive is the enemy besieging the nostril held to be, the nose is not left to its own defence. It were too feeble to accomplish this. An allied army of muscles join in the rescue; nearly one-half of the body arouses against the intruder; from the muscles of the lip to those of the abdomen, all unite in the effort for the expulsion of the grain of snuff. Let us consider what occurs in this instantaneous operation.

The lungs become fully inflated, the abdominal organs are pressed downwards, and the veil of the palate drops down to form a barrier to the escape of air through the mouth, and now all the muscles which have relaxed for the purpose, contract simultaneously, and force the compressed air from the lungs in a torrent out through the nasal passages, with the benevolent determination to sweep away the particle of snuff, which has been causing irritation thereon. Such, then, is the complicated action of a sneeze; and if the first effort does not succeed, then follows a second, third, and a fourth; and not until victory is achieved, do the army of defenders dissolve their compact, and settle down into the enjoyment of peace and quietude.

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 374.)

SARAH KNOWLES.

Sarah Lee, who was born in Great Britain, in 1684, came to Pennsylvania, early in 1713, and settled in Philadelphia. She was an acknowledged minister of the gospel, and soon became a very useful member of the meeting to which she was joined. She was married, on the 10th of First month, 1715, to Francis Knowles, an honest consistent Friend, who was a bookbinder by profession, and kept a shop to increase his income.

Although very diligent in attending meetings at and near home, we cannot find that she ever travelled abroad with a minute or certificate. Her labours with delinquent members were great, and she was frequently employed in visiting families, for which she had a peculiar gift. A testimony concerning her says, she "was of an innocent, exemplary life and conversation, and favoured with a gift in the ministry, which was lively and well accepted." "She was very serviceable in visiting the families of Friends, being well esteemed, and in good unity amongst us."

In the very midst of a career of great usefulness, and in apparent health, she was suddenly removed from works to rewards; being taken with a fit of apoplexy in an afternoon meeting, at the Bank Meeting-house, on the 8th of the Twelfth month, 1735. She was in the 53d year of her age.

SARAH LAY.

The memorial of this Friend, who deceased about Twelfth month, 1735, has recently appeared in "The Friend."

JANE GARRETT.

Jane Garrett was the wife of Samuel Garrett, of Darby. She was, a short memorial of her informs us, "a woman well beloved and esteemed; had a lively gift in the ministry, and thereby was often instrumental to the edifying of the church. She was religiously careful to bring up her children, in the way of Truth. She died the 27th of the Sixth month, 1736."

WILLIAM WALTON.

William Walton was born in Byberry, Gloucestershire, England, in the year 1661 or 1662. He removed to Pennsylvania, in company with three brothers, about 1682, and settled in the part of Philadelphia county, named after their native place, Byberry. Although the brothers were all in limited circumstances when they came to the province, yet by industry, frugality and good management, they became prosperous men, and apparently thriving also in spiritual things. William was the youngest of the brothers, and married, in 1689, Sarah Howell. He was soon called to the work of the ministry, and was for nearly half a century a faithful labourer therein. One of the first great trials he was called on to endure, appears to have arisen from the defection of George Keith, who, by his plausible pretences, had involved Nathaniel Walton in his controversy with Friends, and finally led him entirely away from that Truth, of which he had been convinced. Nathaniel was as an elder brother dear to William Walton, who felt himself under special obligations to him, for he had paid for his passage to this country, and had acted as a father towards him. But he did not flinch from the performance of his religious duty, and with his brothers Thomas and Daniel signed the testimony against Keith. This act separated them from fellowship with their brother, who continued, at least for many years, embittered against them.

In the year 1713, Nathaniel, remembering that he had paid five pound sterling for his brother William's passage to America, manifested the bitter feeling which rankled in his bosom, by writing him a letter, demanding the repayment of that sum with compound interest which for thirty years and upwards, he says, had almost come to two hundred pounds, old currency. He says, he had worked hard for the money in England at a great a day, and adds, he had made a man of William to that day, and that he most certainly expected him to pay him some way or other to his content. Not because he could not do without it, for he blessed God he had plenty of everything, but because it was his due, and William was able to pay it.

We know not how the affair terminated, but William was a prosperous man every way, and was in high esteem, particularly in religious society. He had known what it was to pass through public opposition in his ministry, which probably all arose from his faithfulness against Keith, but he lived it down. His travels in the ministry were not extensive, with the exception of a general visit throughout Virginia, Maryland and Carolina, performed in 1721 in company with Richard Busby. He visited at times the Yearly Meetings for worship held at different parts of his own Yearly Meeting, and was diligent in the attendance of his own and neighbouring meetings. He also was at times engaged in visiting in gospel love the families of Friends, and continued in unity with the faithful, esteemed and honoured as a father in the Truth to the end of his days. His death took place on the 8th day of the Twelfth month, 1736, he being about 75 years old.

RICHARD TOWNSEND.

Richard Townsend was born in Old England, about the year 1644. His parents appear to have resided in or near Cirencester, in Gloucestershire, and to have been convinced of the Truth as professed by Friends when this their son was quite a child. Richard Townsend, Senior, was imprisoned for his conscientious scruples, in 1660, 1662, and 1675, in the gaol at Cirencester. Richard, the son, settled in Martin's-le-grand, in London, where, in 1680 and in 1681, his goods were distrained for the maintenance of the priest, and in the latter year, for his refusing to bear arms.

By this time he had become a Quaker by convincement as well as education, and had married amongst them. Of his removal to Pennsylvania, we shall use his own words.

"Whereas, king Charles the Second, in the year 1681, was pleased to grant this province to William Penn and his heirs forever; which act seemed to be an act of Providence to many religious good people; and the proprietor, William Penn, being one of the people called Quakers, and in good esteem among them and others, many were inclined to embark along with him for the settlement of this place.

"To that end, in the year 1682, several ships being provided, I found a concern in my mind to embark with them, with my wife and child; and about the latter end of the Sixth month, having settled my affairs in London, where I dwelt, I went on board the ship 'Welcome,' Robert Greenaway, commander, in company with my worthy friend, William Penn, whose good conversation was very advantageous to all the company.

"At our arrival we found it a wilderness; the chief inhabitants were Indians and some Swedes, who received us in a friendly manner; and though there was a great number of us, the good ha Providence was seen in a particular mann that provisions were found for us by the S and Indians, at very reasonable rates, as w brought from divers other parts, that were i ited before.

"Our first concern was to keep up and ma our religious worship; and, in order thereunt had several meetings in the houses of the in ants, and one boarded meeting-house was c where the city was to be, near Delaware; an we had nothing but love and good will i hearts one to another, we had very comfo meetings from time to time; and after our ma was over, we assisted each other in building houses for our shelter.

"After some time I set up a mill on Ch Creek, which I brought, ready framed, from don, which served for grinding of corn and s of boards, and was of great use to us. Besid with Joshua Tettery, made a net, and caught quantities of fish, which supplied ourselves many others; so that, notwithstanding it thought near three thousand persons came first year, we were so providentially provide that we could buy a deer for about two shil and a large turkey for about one shilling, an dian corn for about two shillings and sixpenc bushel.

"As our worthy proprietor treated the In with extraordinary humanity, they became civil and loving to us, and brought in abun of venison. As, in other countries, the In were exasperated by hard treatment, which been the foundation of much bloodshed, so th trary treatment here, hath produced their lov affection."

(To be continued.)

The Non-Slaveholding Population of the S —Much misapprehension exists among us in r to the character of the population of the Sou States. We are too much accustomed to spe of the slaveholders as the "South." In th lowing table, compiled from the statistics of th census, the precise state of things will be seen the first column of this table will be found whole number of slaveholders in each of the S ern States, and in the last column is give aggregate white population of each State :—

States.	Slaveholders in each.	White Popu
Alabama,	29,295	426,514
Arkansas,	5,999	162,185
Dist. of Columbia,	1,477	37,941

A Name—The Woods, of Lancashire, En are a distinguished family for character, w and talent; the eldest son, John Wood, has returned member of Parliament for Preston ral times, and proved himself a steady suppor civil and religious liberty. A laughable ci stance once took place upon a trial in Lanca

the head of the family, —— Wood, senior, examined as a witness. Upon giving his name, Bill Wood, the judge, addressing the reverend gent, said, "Pray, —— Wood, how do you spell your name?" The old gentleman replied—

O double T
I double U
E double L
Double U
Double O D

which the astonished lawgiver laid down his pen, saying it was the most extraordinary name he had ever met with in his life, and after two or three attempts, declared he was unable to record it. The court was convulsed with laughter.—*Lady Paper.*

Selected.

"HID WITH CHRIST."

"For ye are dead, and your life is hid with Christ in God. When Christ, who is our life, shall appear, then shall ye also appear with him in glory."—Col. iii., 3, 4.

Our Life! 'tis not in living here,
'Mid griefs that chill, or joys that cheer;
'Tis not a tale of smile or tear—
Our life is hid with Christ!

Like nestling babe upon the breast
Of mother lulling it to rest,
Like bird that sleeps within its nest,
Our life is hid with Christ!

In God's deep bosom, where he bears,
For them who cast on him their cares,
Each weary load that weighs and wears,—
Our life is hid with Christ!

Earth sings her joys, and sighs her woës;
Men smile at these, and weep at those,—
But high o'er all, in sweet repose,
Our life is hid with Christ!

Here is our peaceful joy complete;
Here will we rest, where rest is sweet;
No lamb in Shepherd's Fold shall bleat;
Our life is hid with Christ!

No sunlight can our way illume;
No earth-born shadow cast a gloom;
We live not earthward of the tomb,—
Our life is hid with Christ!

Let buds have bloom or wintry blight;
Come smiling day or frowning night;
Alike the darkness and the light,—
Our life is hid with Christ!

The sun shall set to rise more fair!
Night here is dawn of glory there!
Life dies, to live again—its heir!
Our life is hid with Christ!

Till death's fair shadows g'er us steal,
Till loud the waking trump shall peal,
Till heaven its glory shall reveal,—
Our life is hid with Christ!

Soon shall the blessed day draw near,
And Christ, who is our life, appear!
Rejoice, then, while we tarry here:—
Our life is hid with Christ!

Theodore Tilton.

For "The Friend."

Divine Immediate Revelation.

Among the many favours bestowed upon us by the good and bountiful Giver, there is none that calls forth feelings of greater gratitude than that of having the measure and manifestation of the grace of God richsafed unto us, whereunto, if we give earnest heed, we shall be enabled to know the divine will concerning us; for "the things that are to be known of God are manifest within." We should esteem it a favour that we live in the days of the covenant spoken of by the Most High through His inspired prophet. "Behold the days come, saith the Lord, that I will make a new covenant with the house of Israel, and with the house of Judah; not according to the covenant that I made with their fathers, in the day that I took them by the hand to bring them out of the land of Egypt, which my covenant they brake, although I was an husband unto them, saith the Lord; but this shall be the covenant that I will make with the house of Israel; after those days, saith the Lord, I will put my law in their inward parts, and write it in their hearts, and will be their God, and they shall be my people; and they shall teach no more every man his neighbour, and every man his brother, saying, know the Lord, for they shall all know me, from the least of them even unto the greatest of them, saith the Lord; for I will forgive their iniquity, and I will remember their sin no more." The law under which the Church ought to live is an inward law written upon the heart, not an outward law similar to that under which the children of Israel dwelt and which our blessed Lord did fulfil and make an end of, for he himself says, "the law and the prophets were until John: since that time, the kingdom of God is preached, and every man presseth into it." Yet he came not to destroy the law nor the prophets, as he plainly declared, he came not to destroy but to fulfil. And having fulfilled the law, he set up a more glorious dispensation, under which dispensation we live. We have the more sure word of prophecy spoken of by Peter in his second general epistle, in this wise; "we have also a more sure word of prophecy; whereunto ye do well that ye take heed as unto a light that shineth in a dark place, until the day dawn, and the day-star arise in your hearts."

This more sure word of prophecy remains to be the same that it ever was; it is nothing less than the light of Christ which enlighteneth every man that cometh into the world, if they yield obedience to its manifestations; yet some of modern times have endeavoured to pervert this fundamental doctrine of the society of Friends. But the foundation of God stands sure, and ever will stand sure, having this seal, the Lord knoweth them that are his. Rightly exercised members of our religious Society have ever been concerned to wait upon Christ for counsel and direction, believing that he is able and willing to guide those who submit to his guidance, not only in their daily walk but also in managing the weighty affairs of the church. It accords with our high and holy profession to endeavour to decide matters of vital importance to the welfare of the Society agreeably to the will of the great Head of the Church, immediately revealed, and not by discussion and debate. It is written, "my house shall be called a house of prayer," and were all rightly exercised, our meetings for discipline, as well as those for worship, would be places of prayer; for where such is the happy condition, there is a striving to get to the place of true waiting (which of a truth is in the silence of all flesh) that the will of the great Head of the Church may be known by the inshining of his divine light, which is the more sure word of prophecy, unto which we do well if we take heed. It is sorrowful indeed that any under our name should suffer mere human reason or human policy to sway them in conducting the weighty affairs of the church, which is the Lord's work. "He that hath an ear to hear, let him hear what the spirit saith unto the churches."

It is sorrowfully evident to every rightly discerning spirit, that many under our name are gradually forsaking the heavenly unction, the divine anointing, by which our forefathers in the truth were led. Some may profess to see beyond our worthy predecessors, who suffered so deeply for those testimonies which many seem almost ready to let fall to the ground. Have any seen beyond the light of Christ, by which George Fox and our early Friends were led? If we walked faithfully in that light which is given to enlighten every man that is born into the world, it would lead out of all transgression into perfect holiness. This is known to be the doctrine of Christ and his apostles, which was revived by George Fox and our early Friends after a dark night of apostasy. Have any found a way more holy than this to walk in? Is there any other way to the kingdom of heaven but the way of the cross? Man may endeavour by his wisdom and learning to change the way, to make it easier for flesh and blood, but it remains to be a straight and narrow way; it has never been widened, it is the same that it ever was, though all men may forsake it. "I am the way, and the truth, and the life; no man cometh unto the Father but by me;" this declaration of our Lord and Saviour Jesus Christ applies with the same force at this day as it did when it was delivered; and He further declared, if any man would come after him, let him take up his cross and follow him. These are the only terms of discipleship; the conditions remain unchanged and unchangeable. With the Lord our God there is neither variableness nor shadow of turning, yet through the subtilities of our arch-enemy, some who have been led away from Christ and his inteaching word, into the ways and customs of the world, may try to persuade themselves and others that they have not deviated from the right path, but that the world is becoming more conformed to us, or that we ought in some degree to conform to the practices of other men, in order to draw them towards us: but did not Christ tell his disciples that he had chosen them out of the world, therefore the world hated them? And he declared his kingdom was not of this world. And that eminent apostle, Paul, in his epistle to the Galatians, writes on this wise: "God forbid that I should glory save in the cross of our Lord Jesus Christ, by whom the world is crucified unto me, and I unto the world." Let the world come to us, but we are called upon to keep ourselves unspotted therefrom. What was anti-Christ in George Fox's days is anti-Christ still. It was said of Israel of old, that they should dwell alone, that they should not mix themselves with the nations, and it was complained of Ephraim that he had mixed himself with the people; strangers had devoured his strength, and he knew it not. If the hedges that have been placed around our Society in the wisdom and ordering of Truth, are one by one to be broken down, the badge of the Quaker to be thrown off, and our members suffered to join themselves to strangers, without being considered as transgressors, where will we land? We will soon cease to be known as a separate people; our light will become darkness. But God forbid, that such a state of things should be brought about. There are those yet scattered up and down in the earth, whom the Lord has prepared and is preparing to stand for the law and the testimony. Yet it would seem as if the number of these were but few, or that they are kept down, if we judge from the fruits which appear in many places. It is by their fruits the false prophets are to be known. "Ye shall know them by their fruits. Do men gather grapes of thorns, or figs of thistles." There are many things at the present day to draw away the mind from Christ, and from an inward waiting upon him for counsel. Men have become wise in their own eyes, and many, it is to be feared, have been raised above the pure witness for Truth in their own hearts; their minds being fully stored with the wisdom of this world, they are tempted to conduct the affairs of the church by it, being able, through it, to make long speeches and dissertations calculated to draw away from an inward waiting for the revelations of the Divine will. But the

apostle in his epistle to the Corinthians, says, "Let no man deceive himself." If any man among you seemeth to be wise, let him become a fool, that he may be wise. For the wisdom of this world is foolishness with God, for it is written "he taketh the wise in their own craftiness." And again, "The Lord knoweth the thoughts of the wise, that they are vain." Oh, that we were more concerned to turn inward to the light of Christ, to the law written in the heart, which is able to make truly wise. If our minds were centred here, it would wean us from a dependence upon our own wisdom or the wisdom of others, and if those who have been anointed to preach the glad tidings of the gospel of life and salvation, kept to the anointing which they first received, and were willing to wait from time to time as at Jerusalem, to be endued with power from on high, they would then be enabled to speak as the oracles of God, and would be concerned to minister only in the ability which God gives; and their ministry would tend to turn the hearts of the hearers unto Christ, as their leader and guide, and to turn them from an undue dependence upon the poor instrument, though they might be as inspired prophets of the Lord.

It is the Lord alone that is able to keep and preserve to the very uttermost all those who put their trust in him. But it is declared by the prophet Jeremiah, that, "Cursed is the man that trusteth in man, and maketh flesh his arm, and whose heart departeth from the Lord. For he shall be like the heath in the desert, and shall not see when good cometh, but shall inhabit the parched places of the wilderness, in a salt land, and not inhabited." How different from the state of those whose trust is in the Lord, for it is said, "Blessed is the man that trusteth in the Lord, and whose hope the Lord is." "He shall be as a tree planted by the waters, and that spreadeth out her roots by the river, and shall not see when heat cometh, but her leaf shall be green: and shall not be careful in the year of drought, neither shall cease from yielding fruit."

We have many instances on record of the sorrowful consequences of bestowing undue praise upon man, instead of giving God the glory, and how little the inspired prophets and holy men of old esteemed themselves. They gave God all the glory, they displayed not their own power, but his and their trust was in him alone; and those who have kept his commandments, and put their trust in him, have never been confounded in any age. "They that trust in the Lord, shall be as Mount Zion, which cannot be removed, but abideth forever."

O, that we may be brought more and more to feel our own nothingness and inability to do the Lord's work, without his qualifying power from time to time; past favours and experiences are not a sufficient qualification for religious service; that which was gathered yesterday, will not do for today, but there must be a seeking the heavenly manna every day. If we were concerned daily to ask strength of him, who is strength in weakness, and a present help in every needful time, and kept to the revelations of his Spirit, there would be no strife amongst us, no rents and divisions. The sorrowful condition we as a people are in at this day, has been brought about by individuals not keeping to the pure seed of life in themselves. Men of great wealth and talents, and a large share of literary endowments, unless they are ever watchful unto prayer, will become raised above the cross and yoke of Christ. It is hard for the stubborn will of man to be brought under its discipline, yet when this will is subdued, "His yoke is found to be easy, and his burden light." When those whose gifts have never been sanctified by Divine grace, and who have never known the baptism of the Holy Ghost and of fire to cleanse the floor of their hearts, or having known it, have turned again to the beggarly elements, by which they have become defiled, are suffered to go forth as ministers of the gospel in our Society, or unsound publications, though richly fraught with a display of creaturely wisdom and parts, receive the sanction of a considerable part of the Society, they will be very likely to sow the seeds of dissension and division; for there are those who are willing to believe there is a way to the kingdom of heaven easier to flesh and blood, than the way of the cross; and there are yet those preserved who dare not for the sake of Him, who hath bought them with a price, forsake those testimonies, He has called upon them to bear. Hence divisions arise in the church, to the sorrow of every rightly exercised soul; and is it not to be feared that in some places a loss has been sustained from the watchmen not being found faithfully at their posts to warn the flock of the approach of the enemy? to warn against the reception of doctrines which if received would divide from Jacob, and scatter from Israel? We are all accountable beings, and O, that we may not be found wanting when weighed in the balance of the sanctuary. There is great need for us to rally once more to the standard which Christ hath raised in our hearts; no other standard can be raised to which we can rally and find safety. There is nothing else we can set up in the stead thereof. O, that all would turn with full purpose of heart unto Christ, and rely upon him for counsel and guidance. His power remains to be the same that it ever was, and he will keep those who put their trust in him, however much they may be oppressed and born down by those things which savour not of the things that be of God. Let such be willing to go down again and again into suffering with the suffering seed. The Lord will in his own time permit such to reign with him; he is able as ever he was to cause a little one to chase a thousand, and two to put ten thousand to flight.

Chester County, Seventh month, 1856.

From "Bell on the Hand."

(Continued from page 371.)

The muscle of the body is that fleshy part, with which every one is familiar. It consists of fibres which lie parallel to each other. This fibrous, or filamentous part, has a living endowment, a power of contraction and relaxation, termed irritability. A single muscle is formed of some millions of these fibres combined together, having the same point of attachment or origin, and concentrating in a rope or tendon, which is fixed to a movable part, called its insertion. We may demonstrate upwards of fifty muscles of the arm and hand, all of which must consent to the simplest action; but this gives an imperfect view of the extent of the relation of parts which is necessary to every act of volition. We are most sensible of this combination in the muscles, when inflammation has seized any of the great joints of the body: for even when in bed, every motion of an extremity gives pain, through the necessity of a corresponding movement in the trunk. When we stand, we cannot raise or extend the arm without a new position of the body, and a poising of it, through the action of a hundred muscles.

We shall consider the muscles of the arm, under two heads; in the first, we shall give examples of the living property of the muscles; and then of the mechanical contrivances, in their form and application. In all that regards the muscles, we see the most bountiful supply of power commensurate to the object, but never any thing in the least d superabundant. If the limb is to be move bringing a muscle, or a set of muscles into a the power is not given in that excess which v enable them to overcome their opponents; bu property of action is withdrawn from the oppon they become relaxed, and the muscles, whic in a state of contraction, perform their office comparative ease. A stationary condition o limb results from a balanced but regulated a of all the muscles; which condition may be e their tone. If in an experiment, a weight t tached to the tendon of an extensor muscle, it draw out that muscle to a certain degree, unt tone or permanent state resists the weight: t the flexor muscle be now excited, this being natural opponent of the extensor, the weight fall, by the relaxation of the extensor. So the motion of a limb implies an active state change in both classes of muscles, the one to tract, the other to relax; and the will influe both classes. Were it not so regulated, instea the natural, easy, and elegant motions of the fr the attempt at action would exhibit the body vulsed, or, as the physicians term it, in clonic spa When two men are sawing a log of wood, they alternately, and when the one is pulling, the o resigns all exertion. But this is not the cond of the muscles—the relaxing muscle does not up all effort, like a loose rope, but is controlle its yielding, with as fine a sense or adjustmen is the action of the contracting muscles. Not appears to us more simple than raising the arm pointing with the finger; yet in that single act only are innumerable muscles put into activity, as many thrown out of action, but both the laxing and the contracting muscles are contro or adjusted with the utmost precision though in posite states and under the same act of volitio

By such considerations, we are prepared to mire the faculty which shall combine a hun muscles so as to produce a change of postu action of the body; and we now perceive that power taken from one class of our muscles, ma considered as if it were bestowed on the other that the property of life, which we call the ir bility, or action of a muscle, is upon the whole exhausted than would be the case on any o supposition.

As to the second head, our demonstration an easier kind. We have said that nature bes abundantly, but not superfluously; a truth evi in the arrangement of the muscles. All the m cles of the limbs have their fibres running i oblique direction.

The fibre acting thus obliquely loses power, gains the property of pulling what is attache its further extremity through a greater space, w it contracts; and consequently the velocity i creased. This mechanical arrangement is in gible on the law, that velocity of motion thro space, is equal to power or weight. Here in muscle, there is a resignation of power to ob velocity of motion. The same effect is produ by the manner in which the tendons of the mu run over the joints. They would act more po fully, if they went in a straight line to the toe tips of the fingers; but by being laced down sheaths, they move the toes and fingers wit velocity proportioned to their loss of power.

There is, in the machinery of the animal bo in a lesser degree, the same interchange of velo and force. When a man strikes with a hamm the muscle near the shoulder acts upon the humer in raising the extended lever of the arm hammer, with every possible disadvantage, se that it is inserted or attached so near the centr

on in the shoulder joint. But the loss of
w is restored in another form. What the
se loses by the mode of its insertion, is made
the velocity communicated to the hammer;
descending through a large space, it accumu-
s velocity, and velocity is equal to force. The
vantage of the rapid descent of a heavy body is,
at smart blow is given, and an effect produced
the combined power of all the muscles, with-
his mechanical distribution of force, could not
o plish. This is, in truth, similar to the opera-
of the fly wheel, by which the gradual motion
engine is accumulated in a point of time, and
w is struck capable of crushing or of stamping
e of gold or silver.

e muscle raises the long lever of the arm at
dvantage, or very slowly; but the arm being
d, that motion is rapidly increased by each
ssive impulse from the muscle; and, of course,
elocity at the further extremity is more rapid
at the insertion of the tendon.

ain, if we consider the action of the muscle,
lling down the arm, as in giving a back stroke
the sword, we have the combination of two
rs,—weight and muscular effort. When the
ner descends, the rapidity is increased by the
effect of gravity; but when the action of the
le is conjoined, the two forces, progressively
asing, greatly augment the velocity of the de-
.

e same interchange of power for velocity, which
place in the arm, adapts a man's hand and
rs to a thousand arts, requiring quick or lively
ons. The fingers of a lady, playing on the
oforte, or of the compositor with his types, are
nces of the advantage gained by this sacrifice
rce for velocity of movement. The spring of
oot and toe is bestowed in the same manner,
ives elasticity and rapidity in running, dancing,
deaping.

(To be continued.)

For "The Friend."

is now 1856 years since the Christian Era, and
how few professing christians, and even of those
essing with Friends, understand in their *own*
rience that "what is to be known of God is
fest in man."

ester, 7th month 24th, 1856.

For "The Friend."

he following communication from the Life of
y Peasly, (afterward Neal) addressed to a
nd in Pennsylvania in the year 1756, might
ibly be of use to Friends in these trying times,
n it is to be feared that many are considering
organization of our Society to depend more on
ons than principles. "And although I have
the least design to derogate from the real worth
hose honourable sons of the morning who were
e instrumental in a great degree to break down
partition-wall which carnal, selfish man had
ted between the people and the Sun of Righteous-
, I am not afraid to say and give it under my
d, that it was and is the design of God that his
le in future ages should carry on the reforma-
even further than they did, and notwithstand-
a night of apostasy has come over us as a people,
ay and night succeed each other in their season,
God keeps his covenant with both. I am of
judgment that that day has begun to dawn, in
ch the Sun of Righteousness will rise higher and
e with greater lustre than heretofore; and if
se who are called of God to be the sons of this
rning, look back to the night, and to those who
e slept and been drunken in the night by sipping
the golden cup of abomination' as even to the
latter day, they may frustrate the design of Providence respecting themselves, though not respecting his own work, *for it is his sacred determination to be glorious in heaven and glorified on earth*, though those that would be called his Israel, be not gathered. And I am of the faith that when the Gospel has been preached to them as it is meet it should, that such as neglect to embrace it will be left, and the feet of the messengers turned another way, even to the highways and hedges, with a power of compulsive love which will prevail on the halt, the maimed, and the blind to come to the marriage of the King's son; and by coming they shall be made strong, beautiful and lively, and not look back to those things that are behind, but press forward towards the mark of the prize of the high calling of God in Christ Jesus, following no man's example further than they follow Him. And what if I say, in the faith which is given me, that He has designed to carry some of this generation in these parts of the world higher and further in righteousness than their forefathers were carried, even such as were honourable in their day; and therefore let them take heed that they limit not the Holy One of Israel, nor circumscribe the leadings of His blessed unerring spirit, by looking too much at the example of others; for this has been a means of stopping the gradual progression of many glorious, well-begun reformations; instead of going forward they have looked back, and even sunk below the standard of the first reformers. And such as will be the first happy instruments to labour for reformation in this degenerate age must differ in their trials from the sons of the former morning, and will find them to be of a more severe and piercing kind: theirs were from the world, and such as they might expect from them, although not exempt from false brethren; *ours will chiefly arise from those under the same profession* clothed with *the disguised spirit of the world*, and *from some of the foremost rank, so called, in society.* And what if I say (although my natural eyes may not see it) that God will divide in Jacob, and scatter in Israel before that reformation is wrought in His Church which He designs." Thus was this tribulated, exercised handmaid of the Lord given to foresee and forewarn: may we "ponder well these things as Mary did in her heart."

Canada, 7th month, 1856.

A Curious Fact.—The blubber on a fat whale is sometimes in its thickest parts from fifteen to twenty inches thick, though seldom more than a foot; it is of a coarse texture, and much harder than pork. So very full of oil is it, that a cask closely packed with the clear raw fat of the whale, will not contain the oil boiled from it, and the scraps are left besides; this has been frequently proved by experiments.

THE FRIEND.

EIGHTH MONTH 9, 1856.

It would seem incredible that men born and brought up in these United States, who had any opportunity for having their mental powers developed by education, let it have been in what part of the country it might, could be so lost to all just sense of the rights of man and the justice and benevolence of his Creator, as openly to advocate the opinion that slavery is a divine institution, and that it was and is in accordance with the divine economy for the poorer classes,—the classes which have to work,—to be in servile subjection to, or in other words, slaves to those who may be possessed of a little more of this world's goods then themselves. But when men give themselves up to the government of their sordid or vindictive passions, they lose sight of the requirements of truth and justice, and in their blindness are prepared to call evil good, and good, evil.

We think the following extracts, copied from a late paper, exhibit this in a striking manner.

[From the Richmond (Va.) Inquirer.]

"Until recently, the defence of slavery has laboured under great difficulties, because its apologists—for they were merely apologists—took half-way grounds. They confined the defence of slavery to mere negro slavery, thereby giving up the slavery principle, admitting other forms of slavery to be wrong, and yielding up the authority of the Bible, and of the history, practices and experience of mankind. Human experience showing the universal success of slave society, and the universal failure of free society, was unavailing to them, because they were precluded from employing it, by admitting slavery in the abstract to be wrong. The defence of mere negro slavery involved them in still greater difficulty. The laws of all the Southern States justified the holding white men in slavery, provided that through the mother they were descended, however remotely, from a negro slave. The bright mulattoes, according to their theory, were wrongfully held in slavery.

"The line of defence, however, is changed now, and the North is completely cornered, and dumb as an oyster. The South now maintains that slavery is right, natural and necessary. It shows that all divine, and almost all human, authority justifies it. The South further charges that the little experiment of free society in Western Europe has been, from the beginning, a cruel failure, and that symptoms of failure are abundant in our North. While it is far more obvious that negroes should be slaves than whites—for they are only fit to labour, not to direct—yet the principle of slavery is in itself right, and does not depend on difference of complexion. Difference of race, of lineage, of language, of habits and customs, all tend to render the institution more natural and durable; and although slaves have been generally white, still the masters and slaves have generally been of different national descent. Moses and Aristotle, the earliest historians, are both authorities in favour of the difference of race, but not of colour."

"Ponder well the following extracts from a work published in Virginia, entitled 'Sociology; or, Free Society a Failure,' by George Fitzhugh:"

"Make the labouring man the slave of one man, instead of the slave of society, and he would be far better off." "Two hundred years of liberty have made white labourers a pauper banditti." "Free society has failed, and that which is not free must be substituted."

"Say the Abolitionists:—'Man ought not to have property in man.' What a dreary, cold, bleak, inhospitable world this would be, with such a doctrine carried into practice! . . . . Slavery has been too universal not to be necessary to nature, and man struggles in vain against nature. . . . . Free society is a failure. We, slaveholders, say, you must recur to domestic slavery, the oldest, the best, and most common form of socialism.

"Free society is a monstrous abortion, and slavery the healthy, beautiful and natural being which they are trying unconsciously to adopt." . . . . "The slaves are governed far better than the free labourers at the North are governed. Our negroes are not only better off as to physical comfort than free labourers, but their moral condition is better."

"We do not adopt the theory that Ham was the ancestor of the negro race. The Jewish slaves were not negroes; and to confine the justification of slavery to that race would be to weaken its Scriptural authority, and to lose the whole weight of profane authority, for we read of no negro slavery in ancient times." . . . . .

"Slavery, black or white, is right and necessary."

"Nature has made the weak in mind or body slaves." . . . . "The wise and virtuous, the brave, the strong in mind and body, are born to command." "Men are not born entitled to equal rights. It would be far nearer the truth to say, that some were born with saddles on their backs, and others booted and spurred to ride them—and the riding does them good. They need the reins, the bit and the spur." . . . . "Life and liberty are not inalienable." . . . . "The Declaration of Independence is exuberantly false, and aboriscently fallacious." *

—*Ledger.*

It will be seen by a short article in another column of this journal, headed "The Non-slaveholding population of the South," that in a white population of between six and seven millions, there are not quite three hundred and fifty thousand slave-

holders. By far the greater portion of these whites, not holding slaves, is, according to the representation of Southern authors, uneducated, thriftless, and degraded, and agreeable to the doctrine advocated in the extracts given, ought to become the slaves of the masters who are tyrannizing over the poor blacks, and determinedly contending and labouring to extend their crushing system over other parts of the Union. Is it to be wondered at, that where this system is triumphant, and labour and labourers are so degraded by it, ignorance, servility and destitution should prevail among the working classes, while cupidity, arrogance and love of power are the characteristics of the few who consider themselves so far superior to their fellow men whom they have reduced to the condition of chattels, and hold in intermingable bondage? The indications are strong and unmistakable, that there is a design on the part of many of the slaveholders, connived at and assisted by many of the politicians in the free states, not only to extend this degrading system into the territories not yet settled, but to extort from the free states a recognition of its unrighteous claims and pretensions, by sanctioning the presence of slaves with their masters, within their limits, and removing all restriction to their transmitting their bondmen and women over their highways, whether the masters are in search of their own pleasure, or a market for their human merchandize. Should this be obtained, another encroachment on the rights of the North will be made, and the same state of things may finally be brought about here as now exists in the South: we may have a large portion of the population debauched and degraded by the abominations of slavery, one sixteenth of them holding slaves, and claiming to have their supposed interests alone consulted, while the mechanics and working classes are treated as beings whose happiness consists in being subjected to the unchecked government of their lordly masters, who may provide for them such food and clothing as they may think sufficient, and therewith they must be content. Will the North continue "dumb" under this kind of "defence" of slavery?

SUMMARY OF EVENTS.

EUROPE.—News from Liverpool to 19th ult. The allied troops have all evacuated the Crimea. The Morning Herald states, on authority, that, at the commencement of the late war, Austria offered to join the Allies, on condition that they would assist her in rendering Poland independent. Austria feared Russia. The Emperor of Austria has celebrated the birth of a daughter, by granting an amnesty. Many persons convicted of political offences, have been pardoned, and the term of imprisonment for others shortened. The confiscated estates in Hungary are restored, and other boons granted. The first railway in the Roman States, which goes from Rome to Frascati, was opened on the 7th. The news from Italy continued unsatisfactory; a rupture between Austria and Sardinia seemed probable. The resignation of the Spanish Minister, Espartero, is said not to have been voluntary, but to have been brought about by the intrigues of the Queen-mother Christina, and others. A new cabinet was formed with Gen. O'Donnell at its head. The change gave great offence to the liberal party, and occasioned insurrections in Madrid and other cities. In the capital, the National Guard, assisted by the citizens, engaged in a sanguinary contest with the regular troops, in which the latter were successful. There was much loss of life on both sides. The outbreak had been suppressed in Madrid, but it was reported that the insurrection had been successful at Saragossa, Arragon and Catalonia, the garrisons in each place having sided with the people. On the 15th, an explosion occurred in a colliery near Cardiff, Wales, by which 110 persons were killed.

Liverpool Markets.—The quotations for cotton were unchanged, with moderate sales. There had been stormy weather, which affected the market for breadstuffs. Prices had advanced slightly, and the demand was better. Ohio flour, 35s. 6d. a 37s. There was an active speculative demand for corn, white, at 32s.; yellow, at 30s. per quarter.

Three Days Later.—Havre dates to the 22d ult., have been received. There is no later intelligence with regard to the insurrection in Spain. Serious disturbances had broken out in the Papal States, and also at Naples. At the latter place, numerous arrests were made. A republican conspiracy had been detected at Tarentum, and many arrests of suspected persons had been made. The London Times intimates that the propositions submitted by G. M. Dallas, for the settlement of the Central American question, are likely to prove satisfactory to the British government. It is said that negotiations are in progress between the Governments of Rome, Naples, Florence and Modena, for the purpose of forming a federation under the patronage of Austria. Consols were quoted at London at 95¾.

INDIA AND CHINA.—Bombay dates are to Sixth month 10th. The monsoon had commenced, and rain was abundant. The Indian government meditate a new five per cent. loan. Another insurrection of the Santalls was feared, in consequence of famine. Cholera raged at Patna. Hong Kong papers, of Fifth mo. 22d, report the Chinese insurrection over, around Canton, but broken out again at Honan, and the insurgents held most of the cities.

UNITED STATES.—*Congress.*—The Senate has passed by more than a two-thirds vote a large number of bills from the House, appropriating money for the improvement of rivers and harbours. The House of Representatives has passed, by a vote of 88 to 74, a bill for the reorganization of Kansas, and providing the usual territorial machinery. The bill makes provision for the freedom of speech and of the press; test oaths of whatever kinds are prohibited, nor shall cruel or unusual punishments be allowed; all criminal prosecutions pending in any of the courts of Kansas, imputing to any persons the crime of treason, and all criminal prosecutions for alleged violation or disregard whatever of what are usually known as the laws of the Legislature of Kansas, shall be forthwith dismissed, and every person restrained of his liberty released. It restores the Missouri restriction, and provides for the encouragement of settlement and education. The bill repeals all parts of the Kansas Nebraska, or other acts in conflict with this bill. The Fortification bill, as finally passed by the House, appropriates $1,703,000 for various works of defence. The heaviest items are for the defence of San Francisco Bay, Cal. After long discussion, the House, on the 1st inst., adopted a resolution declaring that Whitfield was not entitled to a seat as a delegate from Kansas. The vote stood yeas, 110; nays, 92. A resolution that Reeder be admitted as a delegate, was rejected—yeas, 88; nays, 113. The special elections in the districts of South Carolina, lately represented by Brooks and Keitt, resulted in the unanimous re-election of both.

Military Land Warrants.—The whole number of land warrants issued under the act of 1855, is so far 158,475, embracing more than nineteen millions of acres. During the last month, 9055 warrants were issued.

State of the Treasury.—On the 1st inst., there was a balance in the U. S. Treasury, subject to draft, of nearly $23,000,000, after paying upwards of $7,000,000, on account of the Texas debt.

The Western Rivers.—At the close of this month, there were only eighteen inches in the channel of the Ohio, at Pittsburg. The weather warm and showery. At Cincinnati, the river was at a stand, with thirty-four inches in the channel to Louisville.

The Drought.—Copious rains have fallen over a large part of the region, which was suffering for lack of moisture.

Kansas.—The President has removed Gov. Shannon, and appointed John W. Geary, of Pennsylvania, in his stead. The nomination of the latter was confirmed by the Senate without opposition. A letter in the Mobile Tribune, from Kansas, says, of the 350 Southern emigrants who went with Col. Buford into that territory, only about 50 remain. The writer laments this desertion of the territory by Southern men.

Utah.—A letter from Fort Laramie, of Sixth month 14th, says, "We have met with several parties of the Saints, returning from Salt Lake to the States. All we met gave a terrible picture of the state of affairs there now. The poorer class had to subsist for months on roots—such as thistle, seco, &c., which the Indians gather and sell to them for one dollar per bushel. The grasshoppers, which caused the famine last year, have commenced again this season, and bid fair to destroy the present crop of wheat and vegetables. Many of them appeared very much dissatisfied with the Mormon faith, and stated that they had been deceived."

New Orleans.—The domestic exports to foreign and coastwise ports, for the fiscal year just closed, amounted to $110,353,436, which is an increase over the year ending Sixth mo. 30th, 1855, of more than twenty-six millions. The export trade of New Orleans during last year, is stated to have exceeded that of New for the same period.

The War in Oregon.—A recent letter from Joel Pa superintendent of Indian affairs for Oregon Terri represents the war in Southern Oregon as closed. N all the hostile bands had unconditionally surrend They were to be provided with homes on reserva provided for them.

Commerce.—The statistics of navigation of the U States, for 1855, show an aggregate tonnage of 5,18 tons. Of this amount, 4,321,951 is owned in the States, and 859,032 in the slave States. The lake merce is rapidly increasing; the tonnage for 1855 345,000 tons, valued at nearly $15,000,000. The trade is stated to amount yearly to more than 600 lions.

Philadelphia.—Mortality last week, 95 adults, 284 dren—total, 379.

New York.—Mortality last week, 746. Of the de 544 were children under five years of age. On the sales of wheat were made at $1.70 a $1.75 for new Southern; corn at 70 cts. a 75 cts.

Extraordinary Yield.—During the late season, a of wheat was raised by George W. Dillard, of F Va., from six acres of land, which netted three hun and forty-six bushels, weighing 62 lbs. to the bu The crop was sold a few days since, in Baltimore, brought one dollar and eighty-five cents to the bus

Horseflesh as Food.—The Austrian Gazette states for the last three years in which horseflesh has sold at Vienna, 4925 horses have been slaughte which have furnished 1,093,000 pounds of meat, di buted to the poor in 3,804,000 portions of half a p each.

Submarine Telegraph.—The sinking of the cable complete the telegraphic communication between Fr and Algeria, was to commence on the 20th ult.

The British Navy.—The force now in commission sists of 338 ships and 59,000 men; of these, thirty-s ships and 10,000 men are ordered home to be paid

The Slave Trade.—In a correspondence with the Br Minister at Rio, the Emperor of Brazil announce fixed intention to suppress the slave trade on the w of his empire.

The Russian Navy.—The Russian Black Sea fleet manned by 38,400 picked men, all of whom had se least ten years' service. These men took a very ac part in the defence of Sebastopol, and out of the nu mentioned 23,000 were either killed or died of disea

RECEIPTS.

Received from Thos. Williamson, jr., Eng., pe Dirkin, 10 shillings, vol. 29; from Z. Hampton, agt for Jona. Bundy, $2, to 23, vol. 30, for S. Todd, $ 17, vol. 30, for Samuel Steven, $2, to 14, vol. 30; S. Hobson, agt., O., for Jos. Penrose, $2, vol. 29.

HAVERFORD COLLEGE.

The winter term will commence on the 4th day of T month. Terms, $250 per annum, including Tui Board and Washing. Applications for admission sh be made early.

Address, Jonathan Richards, Superintendent, Haverford, P. O., Pa.; Thomas Kimber, 50 North Fo street, Philadelphia; or Robert Pearsall Smith, 17 M street, Philadelphia.

"Knowledge is Power."

(Continued from page 378.)

xchange among rude nations, or in the early ements of any country, must necessarily be ed, on account of the obstacles which restrict communication among individuals, and oppose ge of place among objects. A wide and rapid , an arm of the sea, a desert, or a wilderness, often proved a complete barrier, cutting off all course between two contiguous tribes or nations. ussia, at this present time, and the same was in Western Europe during the middle ages, g to the lack of facilities for intercommunica- the bulk of all exchanges for particular sec- s of country are made altogether and at one e, by means of fairs held at considerable inter- of time. During the time between the occur- e of these fairs, comparatively few exchanges effected. In the early settlement of the United es, the roads were mere Indian trails, or bridle s, and all transport of merchandise was made backs, borne upon the shoulders of men, or ed upon horses. When —— Hooker and his company journeyed from Massachusetts Bay he valley of the Connecticut to found the settle- t of Hartford, several weeks were consumed in ersing a section of country, which can now be ed over in half a day. When the settlement been established and the culture of the earth menced, it is obvious that but few exchanges d have taken place between the new colony of necticut and the people of Boston; since the e and labour expended in transporting the ar- es to be exchanged, would nearly equal, or ex- d their value. If the people of Hartford pro- ed to exchange corn for axes, or nails, with the rchant at Boston, the owner of the grain would eive but a very small proportion of the value d by the merchant, while the latter would re- ve but a small proportion of the value of the in paid by the agriculturalists: the transporter both instances coming between the producer and sumer to absorb the largest proportion of the ue of the articles exchanged. In the fourteenth, eenth, and sixteenth centuries, the Venetians, the prentines, the Genoese, and the Dutch, were the mmon carriers of the produce and merchandise all the nations of Western Europe, and thereby ined immense wealth. We nowhere read, how- er, that the other nations, whose merchandise d productions were thus transported, attained to y high degree of prosperity during this period. n the contraty, they were poor, and so continued until the producers and consumers perceived the necessity of so perfecting the machinery of exchange that the bulk of the profit should not accrue to the intermediate agents—the transporters. When progress has once commenced in this direction, the Indian trail is converted into a road, the ford-way gives place to a bridge, and the frail canoe to a commodious and gallant vessel. Goods are no longer transported upon the shoulders of men, or the backs of horses, but in wagons, and these in turn, at a later day, are succeeded by railroads and canals. With every facility thus afforded, the cost of transportation is diminished, the producer and consumer are brought nearer to each other; and the profits of both being increased, the amount of their exchanges increase; production is everywhere stimulated, population becomes concentrated, accumulation becomes easy, and labour is in demand.

Equally necessary is it for the perfection of the great system of exchange, that the machinery by which change of form in matter is effected should be as complete as possible. It is immaterial to the consumer whether the high price he pays for his article of consumption results from costliness of manufacture, or costliness of transportation. In either case, an undue enhancement of value, limits demand, and consequently exchange and production are restricted. In those countries where the application of machinery to effect changes in form is rude and imperfect, or no machinery is used at all, the amount of labour that intervenes between the production of the raw material and the consumption of the manufactured product, is frequently immense. The price of labour, equally with the price of transportation in the former instance, is chargeable upon the value of the article when in the market, and nearly equals that value. India formerly supplied the world with cotton-cloth, but the labour of producing the fabric from the fibre was so enormous and expensive, even in a country where wages are merely nominal, that *comparatively* little cloth was used or consumed. Exchange consequently with India for this article was limited.

Now, by the perfection of machinery, an operative at Lowell can spin more cotton in a single day than three thousand Hindoo artisans can accomplish in the same time. And it has been calculated that the machinery of Great Britain alone produces more cloth each week than the whole population of the globe could by their unassisted labour produce in the same time, working night and day. This perfection of machinery has been followed by a very great reduction of price, and a better article of cloth may now be purchased for six or eight cents per yard than could formerly have been obtained for thirty or forty cents. Reduction of price has increased the demand for the manufactured product beyond all precedent, and this, in turn, has been followed by an increased demand for labour, and for the supply of raw material. Thus the labour of many persons has been brought into use, which would otherwise have been wasted or misapplied, and many natural productions are rendered available, which would otherwise have been worthless. The former producer finds that his time is better occupied in increasing the quantity of cotton rather than in manufacturing it, and he thereby increases his exchanges. The three thousand Indians whose labour is performed by one person now find it more profitable to impart value to other substances which they can exchange for cloth rather than manufacture for themselves; and thus an immense addition of industrial capital is added to the aggregate before existing. Every improvement in machinery perfects the product manufactured or decreases the cost—results invariably attended with increased exchanges, increased production and consumption, and a rapid increase of the power of accumulation. So long as India, with imperfect machinery for effecting the change of cotton into cloth, continued to supply the world, the production, consumption, accumulation, and exchange involved were comparatively unimportant; but now, when by the aid of machinery one man is enabled to accomplish the work of three thousand in the same business, the production, manufacture, and exchange of cotton and its products require the skill, labour, and capital of millions, while the accumulation consequent involves the profit and wealth of nations.

Take another example as given by —— Carey. In the early stages of society, the quantity of labour that intervenes between the production of grain and the consumption of bread is very great. The producer has to grind his rye or his wheat between stones, and a considerable portion of the time is thus occupied, when it could be better employed in increasing the quantity of grain. By degrees the grist-mill comes nearer to him, and he saves much time by going to it, although far distant. Population and wealth increases. A new mill is established in his immediate neighbourhood, and he now exchanges directly with the miller, saving nearly all the time he had before wasted on the road; and the consumers of food by whom he is surrounded now obtain nearly all the wheat given for cloth, while its producer obtains nearly all the cloth given for the wheat.

The intimate relation existing between commerce, or the machinery used for effecting change in place and manufactures, or the machinery employed for effecting changes in form, is strikingly shown by the manner in which anything that increases the facilities of transit acts as a stimulus upon manufactures; and, on the other hand, every great improvement in manufactures necessarily leads to an increased development of commerce. More horses are now employed in the city of New York, in connection with the various railroads, than were formerly used upon all the stage routes leading directly to New York. As a consequence of this increased number of horses within the city, increased amounts of hay are required from the country for their support. This hay must be transported, and increased facilities of transportation have therefore been created. But hay is an article too bulky to be sent for any considerable distance as it comes from the field or the barn. It must be pressed and made into bales; and this new requirement has been so great, that within a few years several large establishments have been built for a new business—the manufacture of hay-presses—employing directly the services of a large number of carpenters, blacksmiths, and labourers, and indirectly all concerned in pre-

paring or transporting the wood and iron from which the presses are constructed.

An immense traffic in eggs, fruit, fish, and fresh provisions is continually carried on between the great cities of our Atlantic seaboard and the distant States of the West by means of the facilities afforded by railway conveyance, all of which business, with nothing but the old wagons to depend on, would be obviously impossible.

Notwithstanding the perfection attained to in the construction of machinery for effecting changes in the place and form of material objects, but few exchanges could be made, unless some standard were adopted, known and recognized by all, by which all other values might be compared and measured, and through which exchange in ownership might be accomplished. The difficulty and inconvenience which, as we have before shown, the prodigal would have experienced had he received a remuneration for his labour, either in coal, in food, or in drink, would be experienced in a greater or less degree by every other person who is obliged to effect his exchanges in kind, as salt for wheat, sugar for iron, etc. The farmer may not require iron utensils of the blacksmith or shoes of the shoemaker, and yet the latter may have nothing else to offer him for his wheat. Again, if the blacksmith or the shoemaker desire clothing, it is by no means certain that the cloth-maker requires iron or shoes, although he would gladly exchange cloth for cotton or wool. In short, so insuperable are the difficulties of effecting any system of exchanges in kind, that some machinery for facilitating these transactions has always been devised, even by the rudest nations. We designate such machinery employed for facilitating exchanges as a circulating medium—money.

Among the North American Indians, the circulating medium was wampum and beaver-skins; among the natives of West Africa, it consists of small shells, called cowries. Our Anglo-Saxon ancestors used slaves and cattle as the mediums of exchange; and going back to remote periods, we find in the time of Homer, that while the price of the armor of Diomede was nine oxen, that of Glaucus cost him one hundred head of cattle. In the early history of the American colonies, codfish and tobacco were not unfrequently used as a circulating medium.

Among all civilized or commercial nations, however, as wants have multiplied, and the number of exchanges have increased, the various articles used as circulating mediums have given place to pieces of coined or stamped metal, which we designate as money. Different metals have been used at different times for this purpose. Iron was established as money among the Spartans by Lycurgus; brass was used by the Romans; and in modern times platinum has been coined by the Russians. The metals, however, which most perfectly effect the desired object of facilitating exchanges, are gold and silver, and these two, by almost universal consent, have now been established as the standards by which all other values are to be compared or measured.

(To be continued.)

Epistle of George Fox.

About this time I received some lines from a high professor concerning the way of Christ, to which I returned the following answer:—

Friend,—It is not circumstances we contend about, but the way of Christ and his light, which are but one; though the world hath imagined many ways, and all out of the light; which by the light are condemned. He who preached this light, said, "He that knoweth God, heareth us; he that is not of God, heareth us not; hereby know we the Spirit of Truth and the spirit of error." It is the same now, with them that know the truth; though the whole world lies in wickedness. All dispensations and differences, that are not one in the light, we deny; and by the light, that was before separation, do we see them to be self separations in the sensual, having not the Spirit. Their fruits and end are weighed in the even balance, and found to be in the dark, the lo-here, and lo-there thou tellest of. The presence of Christ is not with them, though the blind see it not; who see not with the pure eye, which is single; but with the many eyes, which lead into the many ways. Nor are any the people of God, but they who are baptized into this principle of light, by which all the faithful servants of the Lord were ever guided in all ages, since the apostasy, and before. For the apostasy was and is from the light; and all that oppose the light, are apostates. They who contest against the truth, are enemies to it, and are not actuated by the Spirit; but have another way than the light. All such are in the world, its words, fashions, and customs, though of several forms, as to their worship; yet all under the god of this world, opposing the light and appearance of Christ, which should lead out from under his power, of what form soever they are; yet are they all joined against the light. All these are of the world; and fighting against them who are not of the world, but are gathered and gathering out of it; and so it ever was against the people of God, under what name soever. They only are saints by calling, who are called into the light; and sons of Sion, who vary not from the light, to which the Spirit is promised, which is not tied to any forms out of the light; wherein all inherit who are coheirs with Christ; which many talk of, who inherit the earthly instead of the heavenly. And whereas thou speakest of Christ and his apostles clothing themselves with the sayings and words of the prophets; and of their being your example in so doing; I say, wolves will take the sheep's clothing; but the light and life finds them out and judges (not by their stolen words, but) by their works. Nor did Christ cover himself with any words, but what were fulfilled in him; nor do any of Christ's boast in other men's lines, made ready without them; to which rule if ye be obedient, fewer words and more life will be seen among you. Then ye will not count it straitness to silence the flesh, and hear what he saith, who speaks peace, "that his people turn no more to folly." If ye once know that what is stolen must be restored fourfold, the mouth of the prophet will be stopped, which builds up in deceit, but not in righteousness. And whereas thou sayest, "The Spirit of Truth affords nothing but endless varieties; I say the Spirit of Truth thou knowest not: for the Spirit of Truth said, there is but one thing needful; and to speak the same thing again, is safe for the hearers. But that Spirit which affords nothing but endless varietics, is not the Spirit of Truth; but is gone out into curious notions; and the number of his names and colours is read nowhere, but in the unity of the Spirit of Truth. All others call truth deceit, and deceit truth, as the blind, that opposed the light, ever did; who are ever learning endless varieties, but never able to come to the knowledge of the truth, nor to an end of their labours: but when they are out of one form, get into another; so long as they can find a green tree without. Thus ye are kept at work all your life; and to the grave in sorrow, as the dumb priests thou tellest of, have been before you; only ye have got a finer image, but less life. And thou, whose teaching hath no end, art in the horse-mill, thou speakest of. I have read the epistles to Timothy and to the Hebrews; and there I find the duty of all believers is, to see the law of th covenant written in the heart, whereby all know God, from the least to the greatest. I the Holy Scriptures are profitable for the m God; but what is that to the man of sin, t first born, who is out of the light, and being ble and unlearned, wrests them to his own de tion, but to the light cannot come. And for two ordinances thou speakest of, I say, upo same account ye deny the priests of the therein, we deny you, being both of you not out of the life, but out of the form, too. That mand, Matt. xxviii. 19, ye never had, nor it er; which was "to baptize into the name o Father, Son, and Holy Ghost." What Pa ceived of the Lord, that body, and that brea know as little, but what ye have found in the t ter; nor the coming of Christ neither, who ca believe his light. And whereas thou speake preaching Christ of envy, and pleadest for say, such preachers we have enough of in days. What else art thou doing, who sayest was sent to baptize; though Paul says he was and so thou wouldst prove him a liar, if any w believe thee before him. Thou sayest, also, aught thou knowest, he might baptize thousan Thou mightest as easily have said millions, an soon have proved it. Thou mayest say the s of circumcision also, and on the same ground, for the signs that followed those that belie which thou sayest are ceased; I say, they who not receive the light, cannot see the signs, nor c believe them if they should see them to carp no more than formerly, they could do, who opp the light in former ages. They cannot properl said to cease to such, who never had them; have only heard or read, that others long ago them. But that the power, and signs, and sence of God is not the same that ever it wa the measure wherein he is received in the light, I deny; and declare it to be false, and fro spirit that knows not God, nor his power. An for the gospel foundation thou speakest of, I it is to be laid again in all the world. Ye n were on it, since the man of sin set up his fo without power. Till ye can own the light of Ch which the saints preached, and their life and p tice, for shame cease to talk of their foundat or glorious work, or quakings and trembli which are the saints' experiences, which the wo knows not, nor can own; though ye cannot that ever any came aright to declare how knew God, or received his word, without them. thy exhortation thou biddest me "love Ch wheresoever I see him:" but hadst thou told where one might come to see him, or how one m know him, thou hadst showed more of a christ in that, than in all thou hast spoken. But, it see ye are not all of one mind; some of you say, " is gone and will be no more seen, till doomsday but if ever ye come to see Christ to your comf while ye oppose his light, then God hath not spol by me. This thou shalt remember, when they t thou hast spent. 1656. G. F.

British and American Contributions.—T voluntary contributions to religious and benevol institutions are among the most gratifying evidenc of modern enlightenment. We find in one of exchanges a statement of the receipts of the vari benevolent societies and institutions of Great B tain during the last fiscal year, from which learn that the gross amount was $5,812,609, which sum $627,752 was received by Bible So eties, $2,133,891 by foreign and colonial missio $960,003 by home missions and church and cha building societies, $201,948 by tract and b

ies, $572,059 by benevolent societies, $296,028
phan asylums, $91,690 by reformatories and
utiaries, $491,334 by hospitals and medical
ies, $65,068 by hospitals for social amelioraand $292,128 by educational societies. The
ts of nineteen of the American Christian
izations for the year ending in April last
$1,849,823, being an increase of $207,948
the receipts of the previous year.—*Late*

From "Bell on the Hand."

(Continued from page 383.)

t there is another use for certain small mus-
in the hand. The combined strength of all
uscles, in grasping, must be very great: in-
the power is exhibited when we see a sailor
ing by a rope, and raising his whole body
one arm. What then must be the pressure
the hand? It would be too much for the tex-
even of bones and tendons, and certainly, for
lood vessels and nerves, were not the palms
e hands, the inside of the fingers, and their
guarded by cushions. The elastic pad in the
of the horse and camel is not a whit more ap-
riate than the fine elastic texture of the hand.
dd to this purely passive defence there is a
le, which runs across the palm, and more es-
lly supports the cushion on the inner or ulnar
: it acts powerfully as we grasp; and it is
muscle which, raising the edge of the palm,
ws it, and adapts it to lave water, forming the
of Diogenes.

hilst the cushions on the ends of the fingers
d them in the powerful actions of the hand,
hall presently see that they are useful in sub-
ence to the nerves of touch; conferring a power
ceiving impressions, which the utmost delicacy
e nerves themselves could not bestow.

om what the reader already understands of
onformity which subsists among all the parts
n animal body, he will readily comprehend
there is a perfect relation between the bones
the muscles: that as the bones change, and
it a variety in their size, relative position, and
ulations, so there is an adaptation of the mus-

Accordingly, we sometimes find the muscles
rated into smaller, and sometimes consolidated
more powerful masses.

'e have just stated that the power of contrac-
is a vital property. The continued action of a
le, therefore, exhausts the vitality; and to
ort that action, when it is inordinate, there
be a more than usual provision for the supply
is living power, viz:—a means of increasing
aintaining the circulation of the blood, which
e source of all vital power.

very muscle of the body has its prescribed
e of action, from the unwearied irritability of
eart to the effort of the muscle which guides
pen. Some are ever in action with but short
rvals; others act in regular succession: some are
r the will, others withdrawn from it; some
quickly, as the heart, others act slowly, as the
ach; but these are original endowments, and
ot result from the force or languor of the circu-
n of the part.

a speaking of the arteries which go to the hand,
ay be expected that we should touch on a sub-
which has been formerly a good deal discussed,
ther the properties of the right hand, in com-
son with those of the left, depend on the course
he arteries to it: for it is affirmed that the
k of the artery going to the right arm, passes
rom the heart so as to admit the blood directly
more forcibly into the small vessels of the arm.
is assigning a cause which is unequal to the effect, and presenting, altogether, too confined a view of the subject: it is a participation in the common error of seeking in the mechanism the cause of phenomena which have a deeper source.

For the conveniences of life, and to make us prompt and dexterous, it is pretty evident that there ought to be no hesitation which hand is to be used, or which foot is to be put forward; nor is there, in fact, any such indecision. Is this taught, or have we this readiness given to us by nature? It must be observed, at the same time, that there is a distinction in the whole right side of the body, and that the left side is not only the weaker, in regard to muscular strength, but also in its vital or constitutional properties. The developement of the organs of action and motion is greatest upon the right side, as may at any time be ascertained by measurement, or the testimony of the tailor or shoemaker; certainly, this superiority may be said to result from the more frequent exertion of the right hand; but the peculiarity extends to the constitution also; and disease attacks the left extremities more frequently than the right. In walking behind a person, it is very seldom that we see an equalized motion of the body; and if we look to the left foot, we shall that the tread is not so firm upon it, that the toe is not so much turned out as in the right, and that a greater push is made with it. From the peculiar form of woman, and the elasticity of her step, resulting more from the motion of the ankle than of the haunches, the defect of the left foot, when it exists, is more apparent in her gait. No boy hops upon his left foot, unless he be left-handed. The horseman puts the left foot in the stirrup and springs from the right. We think we may conclude, that every thing being adapted, in the conveniences of life, to the right hand, as for example, the direction of the worm of the screw or of the cutting end of the augur, is not arbitrary, but is related to a natural endowment of the body.

He who is left-handed is most sensible to the advantages of this adaptation, from the opening of the parlour door to the opening of a pen-knife. On the whole, the preference of the right hand is not the effect of habit, but is a natural provision, and is bestowed for a very obvious purpose. And the property does not depend on the peculiar distribution of the arteries of the arm—but the preference is given to the right foot, as well as to the right hand.

(To be continued.)

Old Times.

At a late meeting of the Pennsylvania Historical Society, Rowland E. Evans presented the following ancient testimony of "Woman Friends (Quakers) of Burlington," against the vanities and follies which, it would appear, had already begun to prevail over the simplicity of that primitive time.

From Woman ffriends at the yearly meeting held at Burlington the 21st of the 7th month, 1726.
To Woman ffriends at the several quarterly and monthly meetings belonging to the same,
Greeting:

Dear and Well-Beloved Sisters: A weighty concern coming upon many ffaithful ffriends at this meeting in relation to divers undue liberties that are too frequently taken by some that walk among us and are accounted of us; we are willing, in the pure love of Truth which hath mercifully visited our souls, tenderly to caution and advise our ffriends against those things when we think inconsistent with our ancient Christian testimony of plainnes, in apparel, &c., some of which we think proper to particularize.

As first, that immodest fashion of hooped petticoats, or the imitation of them, either by something put into their petticoats to make them set full, or wearing more than is necessary, or any other imitation whatsoever, which we take to be but a branch springing from the same corrupt root of pride. And also that none of our ffriends accustom themselves to wear the gowns with superfluous folds behind, but plain and decent; nor to go without aprons, nor to wear superfluous gathers or plaits in their caps or pinners, nor to wear their heads dressed high behind; neither to cut or lay their hair on their forehead or temples.

And that ffriends be careful to avoid wearing striped shoes, or red or white heeled shoes or clogs; or shoes trimmed with gaudy colours.

Likewise that all ffriends be careful to avoid all superfluity of furniture in their houses, and as much as may be to refrain using gaudy flowers or striped calicoes and stuffs.

And also that no ffriends use that irreverent practice of taking snuff, or handing snuff-boxes one to the other in meetings.

Also that ffriends avoid the unnecessary use of fans in meetings, lest it divert the mind from the more inward and spiritual exercise which all ought to be concerned in.

And also that ffriends do not accustom themselves to go with bare breasts or bare necks.

There is likewise a tender concern upon our minds to recommend unto all ffriends the constant use of the plain language, &c., being a branch of our ancient Christian testimony, for which many of our worthy Elders underwent deep sufferings in their day, as they likewise did because they could not give the common salutations by bowing and cringing of the body, which we earnestly desire ffriends may be careful to avoid.

And we further tenderly advise and exhort that all ffriends be careful to maintain love and unity and to watch against whisperings and evil surmisings one against another; and to keep in humility, that nothing be done through strife or vain glory; and that those who are concerned to take an oversight over the flock, do it not as lords over God's heritage, but as servants to the churches.

Dear Sisters, these things we solemnly recommend to your careful notice, in a degree of that divine love which hath graciously manifested itself for the redemption of a remnant from the vain conversation, custom and ffashions that are in the world, that we might be unto the Lord a chosen generation, a royal priesthood, an holy nation, a peculiar people, showing forth the praises of Him who hath called us out of darkness into his marvellous light: that we may all walk as children of the light and of the day, is the earnest desire of our souls.

We conclude with the salutation of unfeigned love, your ffriends and sisters.

Signed on behalf and by order of the said meeting, by

HANNAH HILL.

Opium Smoking in China.

Everybody is aware of the unfortunate passion of the Chinese for opium, and of the war this fatal drug occasioned in 1840, between China and England. Its importance in the Celestial Empire is of rather recent date, but there is no trade in the world the progress of which has been so rapid. Two agents of the East India Company were the first who, in the beginning of the eighteenth century, conceived the deplorable thought of sending to China the opium of Bengal. Colonel Watson and Vice-President Wheeler are the persons to whom the Chinese are indebted for this new system of poisoning.

At present China purchases annually of the English opium of the amount of seven millions ster-

ling; the traffic is contraband, but it is carried on along the whole coast of the Empire, and especially in the neighbourhood of the five ports which have been opened to Europeans. Large fine vessels, armed like ships of war, serve as depots to the English merchants, and the trade is protected, not only by the English government, but also by the Mandarins of the Empire. The law which forbids the smoking of opium under pain of death, has indeed never been repealed, but everybody smokes away quite at his ease notwithstanding. Pipes, lamps, and all the apparatus for smoking opium are sold publicly in every town, and the Mandarins themselves are the first to violate the law and give this bad example to the people, even in the courts of justice. During the whole of our long journey through China, we met with but one tribunal where opium was not smoked openly, and with impunity.

Opium is not smoked in the same manner as tobacco. The pipe is a tube of nearly the length and thickness of an ordinary flute. Toward one end of it is fitted a bowl of baked clay or some other material, more or less precious, which is pierced with a hole communicating with the interior of the tube. The opium, which before smoking is in the form of a blackish viscous paste, is prepared in the following manner: A portion of the size of a pea is put on a needle, and heated over a lamp until it swells and acquires the requisite consistence. It is then placed over the hole in the bowl of the pipe, in the form of a little cone that has been previously pierced with a needle so as to communicate with the interior of the tube. The opium is then brought to the flame of the lamp, and after three or four inspirations the little cone is entirely burned, and all the smoke passes into the mouth of the smoker, who then rejects it again through his nostrils. Afterward the same operation is repeated; so that this mode of smoking is extremely tedious. The Chinese prepare and smoke their opium lying down, sometimes on one side, sometimes on the other, saying that this is the most favourable position; and the smokers of distinction do not give themselves all the trouble of the operation, but have their pipes prepared for them.

At Canton, at Macao, and at other ports open to European commerce, we have heard people attempt to justify the trade in opium, by the assertion that its effects were not so bad as was supposed; and that, as with fermented liquors and many other substances, the abuse only was injurious. A moderate use of opium, it was said, was rather beneficial to the feeble and lymphatic Chinese. Those who speak thus, however, are commonly dealers in opium, and it is easy to suppose that they seek by all possible arguments to quiet their consciences, which can hardly fail to tell them they are committing a bad action. But the spirit of trade and the thirst of gold completely blind these men, who, with this exception, are generous in their conduct, keep their purses always open to the unfortunate, and are prompt in every good work. These rich speculators live habitually in the midst of gayety and splendor, and think little of the frightful consequences of their detestable traffic. When from their superb, palace-like mansions on the sea shore, they see their beautiful vessels returning from the Indies, gliding majestically over the waves, and entering with all their sails spread into the port, they do not reflect that the cargoes borne in these superb clippers, are bringing ruin and desolation to numbers of families.

With the exception of some rare smokers who—thanks to a quite exceptional organization—are able to restrain themselves within the bounds of moderation, all others advance rapidly toward death, after having passed through the successive stages of idleness, debauchery, poverty, the ruin of their physical strength, and the complete prostration of their intellectual and moral faculties. Nothing can stop a smoker who has made much progress in this habit; incapable of attending to any kind of business, insensible to every event, the most hideous poverty, and the sight of a family plunged into despair and misery, cannot rouse him to the smallest exertion, so complete is the disgusting apathy in which he is sunk.

For several years past, some of the southern provinces of China have been actively engaged in the cultivation of the poppy and the fabrication of opium; and it is probable that the Chinese will soon cultivate the poppy on a large scale, and make at home all the opium necessary for their consumption.

It is said that the people of London, and many of the great manufacturing towns of England, have been for some time addicted to the use of opium, both in its liquid and solid form, but the circumstance has attracted little attention, though the progress of the habit is alarming. Curious and instructive would it be, indeed, if we should one day see the English going to buy opium in the ports of China, and their ships bringing back from the Celestial Empire, this deleterious stuff to poison England. Well might we exclaim in such a case, "leave judgment to God."—*Huc's China.*

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

RICHARD TOWNSEND.

(Continued from page 380.)

It appears from his own account, which we have given, that Richard Townsend erected a mill, and resided for a time on Chester Creek, where the house he then occupied is still standing. He soon, however, removed into Philadelphia county, where he erected another mill near Germantown. His removal probably took place towards the close of 1683, as we find him and Ann his wife signing a certificate "at our Monthly Meeting at John Hart's house, on Portquesin Creek, in ye county of Philadelphia, ye 2d of ye Fourth mo., 1684.*

He says, "About a year after our arrival, there came in about twenty families from high and low Germany, of religious, good people; who settled about six miles from Philadelphia, and called the place Germantown." "About the time in which Germantown was laid out, I settled upon my tract of land, which I had purchased of the Proprietor in England, about a mile from thence; where I set up a house and a corn-mill, which was very useful to the country, for several miles round. But there not being plenty of horses, people generally brought their corn on their backs many miles; I remember one man had a bull so gentle, that he used to bring his corn on him, instead of a horse.

"Being now settled about six or seven miles from Philadelphia, where, leaving the principal body of Friends, together with the chief place of provisions, as before mentioned, flesh meat was very scarce with me, for some time; of which I found the want. I remember I was once supplied by a particular instance of Providence, in the following manner:—

"As I was in my meadow, mowing grass, a young deer came and looked on me; I continued mowing, and the deer in the same attention to upon which I laid down my scythe, and wen wards him; upon which he ran off a small tance; I went to my work again, and the deer tinued looking on me; so that several times I my work, to go towards him; but he still kept self at a distance. At last, as I was going tow him, he, looking on me, did not mind his steps, ran forcibly against the trunk of a tree, and himself so much, that he fell; upon whi ran forward, and, getting upon him, held hi the legs. After a great struggle, in which I almost tired him out, I threw him on my sh ders, and with some difficulty carried him h about a quarter of a mile, to my house." proved very serviceable to my family."

Richard Townsend was a religious man, serviceable in various ways amongst his friends neighbours. He was a faithful defender of ancient doctrines of the Society of Friends, ag the sophistry, underhand insinuations and attacks of George Keith, and was one of those signed the Yearly Meeting's testimony against apostate, as well as that issued by the Quart Meeting of Philadelphia. About this time or after he came forth in the ministry, to the com and edification of the church. His dedicatic heart to the Lord's service did not save him temporal losses, although doubtless he felt blessed Saviour near to sustain him in the ho trouble, and to strengthen him to hold fast his fidence that all things would work together good. In the summer of 1701, a great fr destroyed his mill, and stripped him, according report made to the Quarterly Meeting, of most he was possessed of. His friends were activ raising funds for the support of himself and family, until he should once more be in a condi by his own industry to supply their wants.

From this time we have abundant evidenc his dedication to the work which his Lord Saviour had assigned him in his militant ch The meetings within ten or twelve miles of hi sidence, were frequently attended by him. Of at Germantown attended by him in the First mo 1702, we find this account: "hard at first, mu be overcome; but at the close, Truth over all," returning from a visit to Maryland, paid during summer of 1702, he informed his friends that " Lord had helped him in his exercises and labo He had had large meetings, and there was openness manifested. During the year 1703 paid an extensive visit throughout New Engl from the meetings in which certificates of unity his services were produced. After this he wa ligently engaged in labours near home until e in 1706, when, with the unity of his Friends sailed for England to visit the churches throug that land. He laboured there faithfully and gently for about two years, returning home the middle of the year 1708, bringing a certifi of unity from Friends at London with his comp and religious service.

After the Yearly Meeting of 1709, he acc panied Joshua Fielding, a Friend in the minis on a religious visit to some of the meetings to south. In 1713, he, with Ann his wife, remo into the city of Philadelphia, where he contin to reside until his death. About the close of 17 he received a certificate to visit Maryland and ginia, which service appears to have been perfor during the first three months in the year 17 We find it recorded under date, Third mo. 7t that year, that he "was abroad on service Truth." At the time of the Select Yearly Meet Seventh month of the same year, he had the probation of his friends to accompany John Fa

* Richard's friend, Joshua Tittery, who had assisted him at Chester, in making a net and fishing, was a glass-blower by profession, and was employed in that line by the Society of Free Traders, at Philadelphia. He found some difficulty in getting his claims on the society liquidated, and appears to have changed his profession, adopting that of a carpenter.

on his religious visit, and was absent on rvice nearly three months. He was now g old, and although still very diligent in the nce of neighbouring meetings, we do not n engaged in extensive travels.

ne early part of the year 1728, he appears e prepared a statement from which we have y made some extracts. It was entitled "The ny of Richard Townsend, showing the pro- al hand of God, to him and others, from the tlement of Pennsylvania, to this day." We ow add the conclusion of the testimony.

people began to spread, and improve their the country became more fruitful; so that who came after us, were plentifully supplied; ith what we abounded we began a small abroad. And as Philadelphia increased, s were built, and many employed. Both y and trade have been wonderfully increasing day; so that, from a wilderness, the Lord, good hand of Providence, hath made it a ll field: on which to look back, and observe e steps, would exceed my present purpose; eing now in the eighty-fourth year of my age, aving been in this country nearly forty-six and my memory pretty clear, concerning the ad progress of the Province, I can do no less eturn praises to the Almighty, when I look nd consider his bountiful hand, not only in tem- , but in the great increase of our meetings; in he hath many times manifested his great kindness, in reaching to, and convincing persons of the principles of Truth; and those, were already convinced and continued faithful, not only blessed with plenty of the fruits of arth, but also with the dew of heaven. I am ged, in my spirit, to supplicate the continuance of to the present rising generation, that as God blessed their parents, the same blessing may in on their offspring to the end of time; that y be so, is the hearty desire and prayer of ancient and loving friend,

RICHARD TOWNSEND."

ichard Townsend was often employed in visit- the families of Friends, under appointment of eeting, and continued bright in his intellect, faithful in religious engagements until towards close, Tenth month, 1729, he being then about y-five years old. After this we can trace him nger at meetings of any kind, although his h did not take place until the 30th of Third th, 1737, when he was in the ninety-third year is age. His friends say of him, "He was a s and humble man, sincerely concerned for the notion of piety and virtue; his ministry being d, living, and tending to edification, was well pted. He visited Friends in the service of th in Great Britain, and continued faithful to end of his days."

(To be continued.)

For "The Friend."

The following extracts are taken from an article lished in "Household Words," which, though ten rather too flippantly, contains some interest- information. Speaking of the inducements to dy Entomology, the author says:

"There is no employment for leisure hours more bcent in itself, or more productive of benefit than study of insects. Their number (ten thousand cies in Great Britain only,) their beauty, accessi- ty, and at the same time their mysteriousness, ecially adapt them to become the subjects of ular recreation. Without any desire to under- ue literature or art, it may still be believed that n and his doings, his follies and his crimes, en- ge too much of our attention. The acquaintance of insects once made, ennui and the want of some- thing to do will vanish, every step will be on enchanted ground, and on all sides the prospect will become more and more enticing. The inducement to go out of doors—the walk with a purpose in view, so different to that most dreary of employ- ments, walking for the sake of exercise—is itself no mean advantage. Then, the collector will want to know something about the nature of the specimens he has acquired, and will begin to study their habits, forms, and relationships. This calls into exercise the practice of patience, of minuteness and accuracy of observation, and, eventually, of cautiousness in induction and generalization; all of which, besides their value as elements of mental discipline, are qualities serviceable in an eminent degree in the business of life. Well reasoned, insects, by the mouth of your plenipotentiary."

The writer then continues:

"What is an insect? Their interpreter answers:—The popular notion includes under that term spi- ders, crabs, and lobsters, which have some resem- blance to insects; but they may be separated at once by the fact that they have more than six legs. The flea, however, is so anomalous in its structure, that its proper place in the scale of insects is dispu- ted, some authors contending that it belongs to one order, and some to another. A true insect has six legs, four wings, an external skeleton, and undergoes certain metamorphoses. In the class Diptera, the perfect insect has two fully-developed wings; but has also two merely rudimentary ones, which are distinguished by the names of halteres, or poisers. The breeze-fly, and all two-winged flies, are ex- amples. In Coleoptera, the perfect insect has two fully-developed wings, and two wing-cases which cover the wings. The sexton-beetle and all other beetles are examples. So that the complement of four wings is still in existence, although one pair may be leathery and of little use in flight, as with crickets and grasshoppers, or even very minute and scarcely apparent. All insects proceed from eggs laid by the female parent, except in some cases where the eggs are hatched within the body of the mother; and in a few others, as the aphides, where the ordinary method is supplied for a certain num- ber of generations by a process which has had various interpretations, but which is quite anomalous. For the various phases of metamorphosis amongst in- sects—which is the grand law of insect life—you must make an intimate acquaintance with the crea- tures themselves.

"One of the greatest misfortunes in this world is to lie under a wrongful imputation. Many are the victims whose success has been paralyzed by calum- ny, misunderstanding, or even by accidental mal-a propos. Give a dog a bad name, and hang him. The same thing happens to the world of moths. The human public reasons thus: Some moths eat clothes, therefore all moths are to be exterminated. The minor proposition is made to contain the major. I have seen people assassinate the gamma-moth (so called because its wings bear the mark of a Greek letter γ,) and the great goat-moth, whose caterpillar lives in decayed willow-trees, in revenge for an im- agined attack on a Sunday coat. "O! what a big moth!" shout the anti-lepidopterous rioters. "Down with him! Kill him! No moth! No moth! If little moths make holes in my pantaloons, this one is capable of eating them up." Whereas, he may be as innocent of devouring cloth as a cod-fish is of swallowing iced champagne. He may even be a dress producer, a veritable working silk-worm moth, who has already done his duty in his time, for what his furious persecutors know. Moreover, it is not in the shape of moths, but of caterpillars, that clothes-moths commit their ravages. An actual offender (Tinea pellionella,) a very Jew of moths, to be found throughout all the stages of his existence amongst "old clo," is a brown-complexioned fellow, once a caterpillar with a moveable case, who nour- ished himself then in some dark closet, where he made a living out of unused garments, and a house which he carried about with him. Unlike many a Christian, he provides well for his children, by de- positing his eggs in the land of plenty, and thus taking forethought for their maintenance and bring- ing-up. Another guilty culprit is Tinea bisselliella, a sleek, yellow-plush gentleman, who sidles away as you look at him. He spends his time, from youth to maturity, if not under the ermine, yet in as near an approach to it as circumstances permit. He has a dear liking for furs of all sorts; and when he comes out at last in his robes of state, no one would believe how much dirty work had been necessary to procure him all this finery.

"After drawing the line between innocent and malefactor moths, let us add a word of extenuation in favour of cockroaches. As people keep cats to clear their houses of mice; as hedgehogs are con- verted into domestic pets, that they may munch up the black-beetles that swarm by night; so, some- times, it may be expedient to keep cockroaches, that they may indulge their instinct of exterminating a still greater nuisance than themselves; namely, bugs. Webster's Voyage of the Chanticleer informs us that cockroaches are plentiful at Saint Helena. Previous to the ship's arrival there, the crew had suffered great inconvenience from bugs; but the cockroaches no sooner made their appearance, than the bugs entirely disappeared. The cockroach preys upon them, leaving no sign or vestige where they have been; and is, so far, a most valuable and praiseworthy insect. Mr. Newman also acquaints the Entomological Society with the same fact (dis- covered in a London boarding-house,) that the cockroach seeks with diligence, and devours with great gusto, the common bed-bug. He is confident of his informer's veracity, but discreetly refrains from mentioning names or places.

"Although we may fancy butterflies and sphinx- moths to be the gayest creatures in existence, it is nevertheless true, that the private lives of certain lepidoptera are troubled by secret sorrows which a casual looker-on would hardly suspect. One of their insidious enemies is a plant! Herbivorous animals are well known, and are supposed to fall in conveniently with the natural order of things; a less obvious idea is, that there exists, in revenge, carnivorous vegetables. The larvæ of a hawk-moth, Hepialus virescens, is preyed on by the caterpillar- fungus, Sphæria Robertsii. The caterpillar buries itself in the earth, to undergo transformation into the perfect insect; while it is lying dormant there, the fungus inserts a root into the nape of its neck, feeds and flourishes on the animal matter, and, without destroying the form of the victim, at last converts it into a mummy. A similar slaughter of larvæ is performed in Van Diemen's Land by a representative fungus, the Sphæria Gunnii; and another, Sphæria Sinensis, carries on the same work in China; while the S. entomorhiza tries it even in these parts, so far removed from cannibalism. Living wasps have been taken in the West Indies with a fungus growing from their bodies. Still, animal- feeders are not common among plants. In unfavoura- ble seasons, silk-worm caterpillars are destroyed by myriads from the ravages of a minute cryptogamic plant, or mould-fungus, which takes a fancy to grow on their outer integument."

(To be concluded.)

Zeal dropt in charity is good; without it, good for nothing; for it devours all it comes near.

For "The Friend."

William Dewsbury.

(Continued from page 373.)

In a few days the examination of W. Dewsbury was renewed, in which Judge Windham asked, whether he denied all popish tenets. He replied, Popish tenets I deny; and all tenets contrary to the pure doctrine of faith in the Lord Jesus Christ. *Judge W.*—Dost thou own the Scriptures to be a rule to walk by? *W. D.*—The Scriptures I own, and the pure light and power of Christ Jesus that gave them forth, to guide in an holy conversation according to the Scripture; and he that walks contrary to it, is condemned by it. The Judge charged him and G. Fox with the disposition to imbrue their hands in blood, if they had it in their power. W. D. said, It is not so. The Spirit of Truth which we witness in us, is peaceable, and neither doth violence nor sheds blood; and the hands of all that are guided by the Spirit of Truth, the light and power of Christ, are bound from offering violence, or shedding blood. Another Judge said, Their sufferings and stonings are well known in this nation—and they never lift up a hand against any. The judges again strove to induce them to give bond for their appearance at the next assizes; but he and his companions firmly resisted it, as interfering with their religious duties, and implying that they had broken the law, which they denied. They were therefore conducted back to prison, and there confined eleven weeks in the nasty, low jail, among felons, until another assize. Why they were not brought to an immediate trial, instead of being asked questions, irrelevant to their commitment, does not appear; but it was surely great injustice, to deprive innocent men of their liberty without any legal pretext. It seems that often their persecutors found that they had wronged these oppressed people, but how to deliver themselves of their prey, and their own characters too, was sometimes not an easy matter. Friends feared the face of no man, and could make neither unrighteous concessions, nor mean compromises, nor enter into recognizances, nor pay fines nor fees for doing their duty, but were ever willing to suffer cheerfully for what nothing short of their sense of duty could have induced them to do. The jailer and the person who officiated as preacher to the prisoners, avoided him when they could. Dewsbury protested against his doctrine, upon which the justices declared in court, that the minister "durst not come to preach any more, unless some course were taken with these Quakers;" and an order was given to lock them down in the dungeon, which was done always after, during the hour of preaching. W. D. adds, "The dread of our God is upon them, their heart fails them; and their torment is daily increased, to see the Lord's work prosper, which goes on in mighty power all over these parts, and the nation over. Friends grow in the power of our God. They come from many places to visit us, though they hear that they cannot be suffered to come at us—and the wisdom of our God is much in it, who keeps them in patience, with boldness to sit at the jail door, for a testimony against them; which adds to their torment." "We have all things we need in the outward. I have not been free to receive any money of Friends here towards my necessities, which hath much confounded my adversaries, that my life should be given up for their souls' good, and not receive money of them to supply my wants; but in some places I paid for what I needed, when they were not able. As to some that had wealth, but had parents, who said they would be destroyed by receiving me, and that their trading would fail in the world; contrary to their minds, I was ordered of the Lord to pay them in full for what I had, that the gospel might not be burdensome." "Two *young men*, who are in bonds, were brought before the men that sat in the sessions, and *the Lord manifested his power in them*, that the justices were confounded before all the people, but the time of their freedom out of bonds was not yet come. Here are certain precious hearts that have lived in great *pleasures and honours in the world*, who are *now laying them down willingly at the feet of Jesus*."

During W. Dewsbury's confinement in Northampton jail, besides several pieces he wrote to promote the cause of Truth, he addressed epistles and letters to Friends for their instruction and encouragement. In one of them, he says, "Dear Friends, servants, and children of God, whom he hath called and chosen out of the world, be faithful all of you in his counsel. Wait for his power to guide you in all your thoughts, words, and works, in his pure fear, and in obedience to his will. I charge you, in his presence, be valiant for your freedom, dwelling in the power of the living God; that he may arm you against the fiery darts of the devil, to resist him in all his wiles, who goes about like a roaring lion to draw you away, seeking to get your minds from that which is pure, into visible things, then to captivate your affections, to satisfy your wills in created and perishing objects, or in the knowledge of the truth in fleshly wisdom." "You are beloved, who hunger and thirst after righteousness; for you are the children of the kingdom of my Father. With you my life is bound up; and to you this is the word of the Lord—fear not, lift up your heads, and wait in the light with boldness. In it, look up to Christ, your King; he will appear as the lightning from the east unto the west, and you shall behold him, subjecting your wild nature to himself. He will heal your infirmities, satisfy your thirsty souls, and give you the end of your hope, the salvation of your souls. You shall sit down with him in the kingdom of the Father, to rejoice in the power of eternal love and life, which is in his presence forever and ever; this is the children's bread that comes down from heaven." "God Almighty keep you all faithful in his eternal power, to bear his name in righteousness; that his name may be written in your foreheads, and all that see you, may witness you to be the righteous seed whom the Lord hath blessed. His power and presence keep you in the unity of the spirit and bond of peace, where I am with you in the unchangeable love and life."

In the Fifth month assizes, he was again brought to the bar, and underwent a similar inquisition as before, in which the judge charged him with breaking the law, in wandering through the country without a certificate from some justice. William replied, If there be any such law, read it to us. And if there be such a law, thou knowest in thy conscience it is contrary to the Scriptures. For the apostles and ministers of Christ went to and fro in the country, preaching the word of eternal life, and there were added to the church daily such as should be saved; and the number of saints and brethren was daily increased. And the law which is in force in this nation, doth allow all who profess faith in Jesus Christ, to have free liberty to walk in the faith, which is according to the Scriptures. Without any accuser appearing against him and the friends arraigned with him, and without proof of the breach of any law, they were again required to enter into bonds for their good behaviour, but which, refusing to do, they were returned to prison, and detained until the Eleventh month, 1655, a period of nearly six months. As they were leaving the court, William Dewsbury, turning to the judge, spoke as follows:—"With what measure thou metest to us, it will be measured to again. The Lord God of heaven and earth judge between thee and us, and will give unto and every one of us, according to the works have done, and in that day you shall know wh now declared to be the truth; the Lord spoken it, in whom we trust, and he will de us."

The state of the prisons in which so many Fr passed a large portion of their time, was not to be conceived, some for filth and pestilential someness, and others for exposure to the inclem of the elements. Indeed, the condition of prisons, previous to the latter years of the last tury, was a disgrace to any civilized commu not only on account of their filthy, unwholes and neglected condition, but equally so becaus the indiscriminate association to which all cl of prisoners were subjected. It was common Friends, mostly men of the better order, ofte reputable or wealthy families, to be cast into dismal dungeons, one of which is now preserve Warwick jail, and is shown as a relic of for times. The biographer says: "I remember visi it in 1810, and the impression I then received never be effaced." Howard, in his description this jail, says: "The night-room of the felons octagonal dungeon, about twenty-one feet in dia ter, down thirty-one steps, damp and offensive, jailer, on going down, took a preservative." B Montagu, in his account of a visit he paid to same prison in 1815, says: "The offensive va which may now be seen in the prison, is eigh feet ten inches under ground. In the middle cess-pool; on the side is a stream for the priso to slake their thirst. There is a heavy chain in the dungeon, that passed through a link in chains of each of the felons, which was then can up the steps, and secured to the outer door of vault. The *only light and air admitted is thro an iron grate on the top, and nearly even with surface of the ground*." These are the dismal c in which Friends were often made to suffer in co pany with the most abandoned characters. It in Warwick jail that William Dewsbury was prisoned nineteen years of his life, four of which was a close prisoner, whether in the pit, is stated. Nor should we have known that this the fact respecting his confinement in Northamp jail, from any statement of his own; for he suffe too cheerfully to lay much stress on the vile d ance he underwent. But it was, as stated others, in a dungeon, twelve steps under grou among the worst of felons, that he was then prisoned.

The weight of suffering which they patiently dured in those dark, filthy pits, it is difficult for to conceive. They were doubtless sustained by omnipotent hand, and yet we may suppose th health and strength were often greatly impair and the lives of many shortened by disease and untimely death. Are the testimonies for which th so heavily suffered, to be cast away as a thing little worth? At one day it will be a burthenso stone on those who have attempted to lay the waste, disregarding the blood of those marty and the clear spiritual views of the gospel dispe sation which they promulgated.

(To be continued.)

Never assent merely to please others. For th is besides flattery, oftentimes untruth, and dis vers a mind liable to be servile and base; contradict to vex others, for that shows an temper and provokes, but profits nobody.

They that sow in tears, shall reap in joy.

Cincinnati and Washington City.—The colour- population of Cincinnati, as appears from the of that city, number 5,000, of both sexes, and rs says, "they are, as a general thing, sober, and industrious." Of their occupations and it is stated—there are five physicians, one m has a very large practice among both whites acks; twelve grocers; thirty music and school rs; five daguerreotypists; one patent roofer; ocklayers and stonemasons; two trunkmakers; dealers in market; five or six boot and shoe- s, a number of excellent tailors, blacksmiths rpenters; and one hundred milliners, dress- s, shirt-makers and tailoresses. Among them ry Boyd, one of the largest and best cabinet nufacturers in the city, who is worth at least 00; J. P. Ball, R. G. Ball, and J. C. Ball, ke as fine daguerreotypes as are taken in the and who are worth $30,000 at least. names of thirteen of these coloured people en, whose property is valued at $10,000; 6,000; five $5,000; one $4,000; one $3,000; ,000; one $8,000; one $12,000; one $14, six $16,000; four $20,000; five $30,000; 0,000. The names of twenty-five others are and it is stated that these and many others, names are not mentioned, have property g in value from three to twenty thousand s.

writer in the "National Era," published in ngton City, states that there is a good degree ft and industry among the coloured people in ty, notwithstanding the discouragements position. Their number is ten thousand, which t one-fourth of the number of whites. They eleven places of worship, the aggregate value ch is nearly $40,000. Ten of the coloured egations pay their pastors on an average $650 besides marriage fees and other perquisites; g a total of $6,500 yearly over and above the se of keeping the houses, fuel, repairs, etc. are above 1,000 children in the Sabbath s, who are mostly taught by members of the l congregations.

English and American Railroads.—The com- ve security from accident, which English ads enjoy, is the result, not only of the greater r of money there, but also of the more pru- disposition of the people. Never was a truer k, than that an English hostler, when he the coach door, and cries "all right," repre- a trait of national character, just as the Ame- who, under the same circumstances, calls out head," typifies the restless haste of our country-

rain in England never stops, even for a mi- or two, without one set of employees carefully every part of the machinery and running while another set, with hammers, goes from to wheel, knocking to see if there is any flaw akness in the iron. It is still fresh in the ory of all, that the British prime-minister, when to the great naval review, and about to step a train just as it was starting, was immediate- ked back by a policeman. In every way in- and without any distinction as to persons, nglish railroad companies enforce caution and ght.

t it is in the more liberal outlay of means, in constructing and running their roads, that British companies exceed our own in insuring y. An English railroad is fenced in on either and has a gateway at every crossing, with a inary watchmen at each gate, who shuts it a train is due, and would not open even for ueen herself. There are also double tracks, telegraphs and lights along the road for night trains. Accidents from defects in the construction of roads, or even from laches in their management, at least so far as the directors are concerned, are almost unknown in England. The conductors are carefully selected, and are generally perfectly reliable men. Instructions, carefully prepared for every emergency, are issued to them; and as all adhere strictly to these instructions, misconceptions are rendered practically impossible. Analogous cases to a conductor having it left to his option when behind time, to wait at a station, or to run on at the risk of a collision, are unknown in England; for in England human life is too sacredly respected, and too large an amount of capital employed in working railroads, to permit either of such an option on the part of a conductor, or of a conductor sufficiently incapable to create a risk.

The English public, moreover, sustains English companies in this free use of money. The fare, in a first-class car, in England, is nearly three times what the fare is here; and it is paid without a murmur, because travellers there know that safety and speed are costly. A man may go from Philadelphia to Pittsburg for about nine dollars. To go from London to Glasgow, which is but little further, involves an expense of twenty-five dollars. It is true that a first-class car in England is somewhat more luxurious than a car in America, but the difference is not greater than the difference between the interest of money, so that what is saved here in the car and its appointments, is saved there on the capital invested in the road. Moreover, England, as compared with the United States, is both a small and a densely-populated country, so that fewer railroads supply the demands of a larger number of people.

When Americans become as thorough, and careful as the English, and are as able to build good roads regardless of expense, railroad casualties will become as rare here as they do there. It is not by vague newspaper clamor, when a serious calamity occurs on our railroads, but, in a word, by imitating the English in these respects—by reforming the evils of our railroad system—that we will lessen the number and fatality of our railroad accidents.—*Led.*

Benefits of Benevolence.—Where God is forgotten, it is pitiful to see how riches harden the heart of him who gains them. Sometimes the man who was liberal while he was poor, becomes niggardly as he becomes wealthy. The tendency of gain is to nourish selfishness, if the hand that bestows it is overlooked; and the thirst of selfishness can never be slaked. The reservoir of the covetous never overflows. Recognizing no obligation, he yields to no claim. A man of this sort once said: "Others never gave to me, why should I give to others?" Infatuated man! is there none that ever gives to thee? What hast thou not received? Has God given thee nothing? Who gave thee reason, life, success? Who prospered thy plans? Who gave thee power to get wealth? Who has kept thy dwelling safe? Who has warded off from thee a thousand calamities which have overtaken thy fellows? And art thou, then, indebted to none? has none a right to thy bounty? Wilt thou rob God? Shall he have no share of what is his own?

The Emperor Nicholas as an Author.—It is stated on good authority that the Emperor Nicholas, in the last ten years of his life, prepared a work on the administrative policy and military operations of his reign. This work, which the imperial family and some eminent personages alone have seen, is remarkable, it is said, for the great intelligence which it displays. It is not to be published until five years after his death.

Terra Del Fuego.

An officer in the United States Navy, in a letter, gives the following description of that almost unknown people, the inhabitants of Terra del Fuego, the Island at the southern extremity of South America.

The Terra del Fuegians, so called from the country they inhabit, (which in turn derived its name from the number of fires seen along the shore by the first navigators,) made their appearance while we were at anchor at Borja Bay. Shortly after we had reached this place, a small singular looking canoe was seen to leave the shore and make its way towards our ship, and in a few minutes we were honoured by a visit from two of the Indians, with their numerous wives, children and dogs. Upon coming on board the vessel they proved the most inveterate beggars I ever met with. There was nothing they saw for which they did not ask; they begged for themselves, and, if unsuccessful in their application, for their wives and children. Their usual demand is for tobacco and biscuit, and, in endeavouring to purchase some of their weapons as curiosities, we found that the former article was the most prized; and next in value were the bright buttons from our uniforms, (and probably they congratulated themselves on finding people simple enough to give away such splendid ornaments,) and then biscuit, old clothes and empty bottles.

The Indians are by far the most degraded and miserable of all the aboriginal inhabitants of South America. They are low in stature and of a copper colour; their clothing, consisting of a sealskin, worn with the hair outwards and tied around their person by means of sinews, is of the very scantiest description; their food is revolting. They live chiefly upon muscles and limpets, and, whenever they can procure them, eagerly devour seals, sea otters, porpoises and whale's flesh, preparing none by fire, but eating as they cut it from the prey. In their voracity they bear a greater resemblance to some wild animals than to human beings. Their arms seem to consist solely of bows and arrows and spears, pointed sometimes with glass and sometimes with bone; of these they willingly dispose in exchange for their favorite weed. The most noticeable things about them are their baskets and their canoes, both of which manifest some labour and ingenuity in construction. The former are formed of bark or platted grass; the latter are of bark, and put together without a particle of metal. The sides and bottoms are sewed together by means of sinews; small bars of wood are placed athwartships to preserve the shape, and the seams are caulked with some gummy preparation. They are small and light, so as to be easily paddled about by two women. But their skill in making the canoes may be compared to the instinct of animals, for it is not improved by experience. We know from Drake that this, their most ingenious work, has remained the same for the last two hundred and fifty years.

The faces of the men generally seem devoid of any intellectual expression, and, as they belong to the *nil admirari* school, they expressed astonishment at nothing. The women are better looking, and did not hesitate to exhibit their surprise or amusement. I shall never forget the wonder of one of them at first seeing a looking-glass. She first looked at herself, then laughed and sought behind for the reflection; then looked again, and laying it down on the deck, endeavoured to seize the image. The hair of both sexes is worn long, and is almost as coarse as the mane of a horse; the

men have no beards. Captain Cook has compared their language to the sound made by a man clearing his throat; but says Darwin, "certainly no European ever cleared his throat with so many hoarse, guttural, and clicking sounds." One word is made to assume a great many different significations; the same one, for instance, meaning the Deity, the sun, a ship, a child, a dog, and an amulet, or charm, generally consisting of a bit of glass suspended from the neck. Notwithstanding this singular paucity of sounds in their language, they very readily catch the pronunciation of words, and repeat with perfect correctness any sentence uttered in their hearing, although they cannot attach any meaning to the words.

Of their domestic arrangements we could learn but very little. Previously we had found along the shores their wigwams, or rather harbours, consisting of broken branches of trees stuck in the ground and covered with leaves and grass. In these miserable huts, around a small fire built in the middle, they sleep, coiled upon the wet ground like animals. All their property they seem to carry about with them in their canoes. Every man has at least *two* wives, some of them more; probably each as many as he requires to take care of him, to paddle his canoe and collect his food, for the whole labour devolves upon the female portion of the community.

We were informed that these savages are never cannibals unless when driven to it by absolute starvation, and then they *only* eat their *old women*. Upon being asked upon one occasion why they did not kill and eat their dogs, of which animals they have great numbers, in preference to their own people, one of them is said to have given the answer that dogs were useful in catching otters, but that old women were good for nothing.—*Ledger*.

THE FRIEND.

EIGHTH MONTH 16, 1856.

SUMMARY OF EVENTS.

EUROPE.—News from England to Seventh mo. 26th. It is stated that the Central American question may be regarded as virtually settled. Great Britain has consented to give up the Bay Islands to Honduras, that Republic pledging itself never to cede them to any other power, or to allow interference in their affairs. The Summer's Assize in Ireland, shows a gratifying decrease of crime in that country, there being very few cases on the calendar. Heavy failures have occurred in Liverpool, Stockport, and Manchester, the liabilities of the parties being large, and their assets mostly small. The Liverpool cotton market was unchanged, with a limited business. Breadstuffs were lower and in little demand. Western Canal flour, 29*s.* a 33*s.*; Southern 34*s.* a 35*s.* per barrel; yellow corn, 29*s.* a 30*s.*; white, 30*s.* a 31*s.* 6*d.* per 480 lbs. Accounts from Spain represent the insurrection as effectually crushed in Madrid. The National Guard has been almost entirely disarmed. Domiciliary visits were made to secure all the arms in the hands of the citizens, and numerous arrests had been made. The insurrection had been put down at Barcelona, after a severe contest, in which 1200 persons were killed and wounded on both sides. There was still a strong opposition at Saragossa, where it was reported 85 members of the Cortes had assembled, and determined to resist the new ministry. Its head, O'Donnell, has no great party in the country, as he is disliked by both conservatives and liberals, the former being for Narvaez, and the latter for Espartero. The harvest had commenced in France, and it was hoped the crops would prove above an average. The Emperor has dispatched a circular to the Prefects, ordering them, in positive and peremptory terms, to allow to all the Protestants within their respective districts the free and undisturbed exercise of their religion. He desires that he may hear of no more persecution of the Protestants, and that they may never again be disturbed in their worship. The Emperor Napoleon has ordered a canal to be formed in the plain of Plaisance (Haut Garonne) for the benefit of the crops which suffer severely for the want of water during the summer season. The King of Naples has made his answer to the remonstrances of France and England. He "thanks those governments for their counsels. He wishes to act with clemency, and to introduce reforms, but in such matters believes himself the competent judge of the time and proper mode of so doing. At this moment they would not be suitable to his dignity and independence, still less would it be fitting to recall those who are banished, and liberate those who are imprisoned."

Four Days Later.—The British Parliament was prorogued by the Queen on the 29th ult., until the 7th of Tenth month next. In her speech she expressed the hope, that the differences with the United States would be satisfactorily adjusted. The Liverpool cotton market was firm at previous rates. Breadstuffs continued to decline. The reports in regard to the growing crops, were favourable. From Spain, it is reported that the whole of the important province of Arragon continued in successful revolt. The Royal troops had commenced to bombard the city of Saragossa, whereupon the insurgents within demanded five days' cessation of hostilities, which was granted.

UNITED STATES.—The Governor of California having applied to the President for the aid of the military and naval forces of the United States, and for a loan of arms and ammunition to enable him to suppress the revolutionary movement in San Francisco, the President has declined according to his request; deeming the interference of the United States government not authorized by existing circumstances. The President is only to be moved to action by the Legislature of the State in which the insurrection exists, or if by the Executive, only when such Legislature cannot be convened, and when imminent or extreme public disaster can be averted only by such interposition of the General Government.

Congress.—The Senate has passed the Army appropriation bill, with an amendment striking out the House proviso for the protection of Kansas; also, the bill from the House granting a million and a half of acres of land to the State to Mississippi, for railroad purposes; and one for running the boundary line between Washington Territory and the British possessions. A petition was presented on the 5th from Charles Robinson and others, now confined in Kansas, under the charge of treason, praying for relief. Referred to the Committee on the Judiciary. This committee made a report on the necessity for additional legislation in case of the death or disability of the President or Vice-President. The House has been engaged in discussing the details of several appropriation bills; one item appropriating $20,000 for the expenses of the Legislative Assembly of Kansas, was stricken out,—yeas, 90; nays, 58. A proviso was annexed to the appropriation for the Judiciary of Kansas, that the money shall not be drawn from the Treasury till the criminal prosecutions pending in the territory against persons charged with treason or alleged violation of the laws passed by a body of men at Shawnee Mission, claiming to be the Legislature, shall be dismissed by the Court, and every person who has been or may be restrained of liberty by reason of such prosecution be released from confinement—it was agreed to—yeas, 84; nays, 69. A resolution was adopted by the House, authorizing the payment to Reeder of per diem and mileage to the time his claim to a seat as delegate from Kansas, was decided.

New York.—Mortality last week, 624.

Philadelphia.—Mortality last week, 405.

The Creek Indians, by a late treaty, have agreed to relinquish their lands in Alabama, for a million of dollars, $200,000 of which is to be applied to agricultural purposes, and the balance divided per capita.

Miscellaneous.—Travel by Atlantic Steamers.—A statement of the number of passengers conveyed from New York and Boston in the Atlantic steamers to Europe, during the last four months, shows it to amount to 6273 passengers, or about four hundred a week. This is the passage of persons in pursuit of business and pleasure, not emigration, and it proves how greatly travel increases with the facilities for enjoying it.

The Project of Exploring Central Africa, is in progress in New York. The territory proposed to be explored lies between the fifth and fifteenth parallels of north latitude, commencing at the Atlantic ocean, and extending eastward eighteen degrees to the valley of the Niger, comprising an area of about 700,000 square miles.

Great Undertaking.—The Canadian government has granted four millions acres of land to aid in constructing a railroad from Quebec to Montreal, along the north shore of the St. Lawrence to the city of Ottawa, and thence to Sant Ste. Marie. This road is to be completed within five years.

French Manufactures.—Professor Mapes says that nine-tenths of the olive oil in this country is manufactured in France from American lard oil. It is purified by sal soda, and is about equal to olive oil for the table other purposes.

The Canadian Senate.—The Canadian Legislative cil (Senate) elective bill having received the sanc Queen Victoria, forty-eight members will be adde upper house of the Canadian Parliament. Of thi ber 12 are to be elected every two years, and w their seats for eight years. The present membe hold their seats by virtue of a warrant, are pe to retain them for life.

The Coolie Trade.—This inhuman traffic conti be carried on by American and English vessels bring large numbers of Chinese to Cuba. An captain has a contract for delivering 8000. This d tion of labourers are treated on the plantations n than the slaves, and the emigration of these does not diminish the trade in African slaves.

The African Slave Trade.—A correspondent of t York Daily Times, writing from Havana, under Seventh mo. 25th, says that nearly every steame from that place to New York, persons who are c interested in the African slave trade, and who ma tracts at the north for vessels and their outfit traffic. Within the last seven months, not far fr teen thousand Africans have been landed illegall the Cuban coast, from Africa, in nearly equal p tions upon the north and south sides, and no cap any consequence have been made. During this s extensive arrangements have been made in all the able shipbuilding ports of the Union for the requir of the trade for the next twelve months.

From the Isle of France.—Advices from Port Mauritius, of Fifth mo. 12th, say that the choler carrying off nearly 1500 victims, may be said t left the town; but meanwhile continues its rav other parts of the island.

Yellow Fever.—This disease has appeared at C ton, S. C., and up to the 10th, several deaths h curred. The latest advices from Havana state t fever was very prevalent there, and that many Am shipmasters had died of it. A number of cas occurred at the New York quarantine ground as Island, many of which have resulted fatally.

RECEIPTS.

Received from J. Fawcett, agt., O., for David Co Sl. Hollingsworth, Thos. Wickersham, Sl. Baloes French, $2 each, vol. 29, for S. Allison, Jos. W $2 each, vol. 30, for Jona. Edmonson, $2, to 26, for Ruth Stanley, $2, to 19, vol. 30; from Jess agt., O., for Peter Thomas, Senr., $2, to 44, vol. Lydia Miller, $2, to 27, vol. 30; from David N. C., $1, to 10, vol. 30; from E. Shotwell, Ind., 6, vol. 30.

WANTED.

A Female Teacher is wanted for Friends' Schoo mington, Del. Application may be made to

AMY Y. TATUM, } Wilmington
MARY GIBBONS, }

HAVERFORD COLLEGE.

The winter term will commence on Fourth-day, Tenth month. Terms, $250 per annum, includin tion, Board and Washing. Applications for adm should be made early.

Address, Jonathan Richards, Superintendent, Haverford, P. O., Pa.; Thomas Kimber, 50 North street, Philadelphia; or Robert Pearsall Smith, 17 street, Philadelphia.

EVENING SCHOOLS FOR ADULT COLOUR PERSONS.

Wanted, A Principal and two Assistant Teach the Men's School, and a Principal and three Ass for the Women's School.

Application may be made to either of the unders
JOHN C. ALLEN, No. 179 S. Fifth st
SAMUEL ALLEN, No. 134 S. Front st

"Knowledge is Power."

(Continued from page 386.)

t whatever difference of opinion may be en-
ned in respect to the relation which money
ns to the various productive forces of every
ed society, we think our readers will willingly
their assent to the conclusion which we have
voured to illustrate, namely, that accumula-
or capital, is absolutely essential to the pro-
e employment of labour; and that the greater
cumulation the greater the extent of that pro-
e employment. This truth, however, has been
d altogether by some speculative writers; and,
is more important, has been practically denied
ne conduct of nations and individuals in the
r stages of society; and is still denied by ex-
prejudices, derived from the current maxims
rmer days of ignorance and half-knowledge.
the speculative writers we have little to do.
n Rousseau, for instance, advises governments
o secure property to its possessors, but to de-
them of all means of accumulating, it is suffi-
to know that the same writer advocated the
e state, in which there should be no property,
eference to the social, which is founded on ap-
riation. Knowing this, and being convinced
the savage state, even with imperfect appro-
ion, is one of extreme wretchedness, we may
y leave such opinions to work their own cure.
it is not likely that any individual, however
osed to think that accumulation is an evil, would
e, by destroying accumulation, to pass into the
ition described by John Tanner, of a constant
unter with hunger in its most terrific forms:
seeing, therefore, the fallacy of such an opinion,
ill also see that, if he partially destroys accu-
ation, he equally impedes production, and
lly destroys his share in the productive power
apital and labour working together for a com-
good in the social state.

ut, without going the length of wishing to de-
y capital, there are many who think that accu-
ation is a positive evil, and that consumption is
sitive benefit; and, therefore, that economy is
vil, and waste a benefit. The course of a pro-
l man is by many still viewed with considera-
admiration. He sits up all night in frantic riot;
consumes whatever can stimulate his satiated
etite; he is waited upon by a crowd of unpro-
tive and equally riotous retainers; he breaks
destroys everything around him with an un-
ring hand; he rides his horses to death in the
t extravagant attempts to wrestle with time and space; and when he has spent all his substance in these excesses, and dies an outcast and a beggar, he is said to have been a hearty fellow, and to have "made good for trade." When, on the contrary, a man of fortune economizes his revenue—lives like a virtuous and reasonable being, whose first duty is the cultivation of his understanding—eats and drinks with regard to his health—keeps no more retainers than are sufficient for his proper comfort and decency—breaks and destroys nothing—has respect to the inferior animals, as well from motives of prudence as of mercy—and dies without a mortgage on his lands; *he* is said to have been a stingy fellow who did not know how to "circulate his money." To "circulate money," to "make good for trade," in the once common meaning of the terms, is for *one* to consume unprofitably what, if economized, would have stimulated production in a way that would have enabled *hundreds*, instead of one, to consume profitably. Let us offer two historical examples of these two opposite modes of making good for trade, and circulating money. The English Duke of Buckingham, having been possessed of an income of about two hundred and fifty thousand dollars a-year, died in 1687, in a remote inn in Yorkshire, reduced to the utmost misery. After a life of the most wanton riot, which exhausted all his princely resources, he was left at the last hour, under circumstances which are well described in the following lines by Pope:

"In the worst inn's worst room, with mat half hung,
The floors of plaster, and the walls of dung,
On once a flock-bed, but repair'd with straw,
With tape-tied curtains never meant to draw,
The George and Garter dangling from that bed
Where tawdry yellow strove with dirty red,
Great Villiers lies. * * *
No wit to flatter, left of all his store,
No fool to laugh at, which he valued more,
There, victor of his health, of fortune, friends,
And fame, this lord of useless thousands ends."

Contrast the course of this unhappy man with that of the Duke of Bridgewater, who devoted his property to really "making good for trade," by constructing the great canals which connect Manchester with the coal countries and with Liverpool. The Duke of Buckingham lived in a round of sensual folly: the Duke of Bridgewater limited his personal expenditure to two thousand dollars a-year, and devoted all the remaining portion of his revenues to the construction of a magnificent work of the highest public utility. The one supported a train of cooks and valets and horse-jockeys; the other called into action the labour of thousands, and employed in the direction of that labour the skill of Brindley, one of the greatest engineers that any country has produced. The one died without a penny, loaded with debt, leaving no trace behind him but the ruin which his waste had produced: the other bequeathed almost the largest property in Europe to his descendants, and opened a channel for industry which afforded, and still affords, employment to thousands.

When a mob amused themselves by breaking windows, as was once a common recreation in England on an illumination night, by way of showing the amount of popular intelligence, some were apt to say they have "made good for trade."

Is it not evident that the capital which was represented by the unbroken windows was really so much destroyed of the national riches when the windows were broken? for if the windows had remained unbroken, the capital would have remained to stimulate the production of some new object of utility. The glaziers, indeed, replaced the windows; but there having been a destruction of windows, there must have been a necessary retrenchment in some other outlay that would have afforded benefit to the consumer. Doubtless, when the glazier is called into activity by a mob breaking windows, some other trade suffers; for the man who has to pay for the broken windows must retrench somewhere; and if he has less to lay out, some other person has also less to lay out. The glass-maker, probably, makes more glass at the moment, but he does so to exchange with the capital that would otherwise have gone to the maker of clothes or of furniture; and there being an absolute destruction of the funds for the maintenance of labour by an unnecessary destruction of what former labour has produced, trade generally is injured to the extent of the destruction. Some now say that a fire makes good for trade. The only difference of evil between the fire which destroys a house and the mob which breaks the windows is, that the fire absorbs capital for the maintenance of trade or labour in the proportion of a hundred to one when compared with the mob. Some say that war makes good for trade. The only difference of pecuniary evil (the moral evils admit of no comparison) between the fire and the war is, that the war absorbs capital for the maintenance of trade or labour in the proportion of a million to a hundred, when compared with the fire. If the incessant energy of production were constantly repressed by mobs, and fires, and wars, the end would be that consumption would altogether exceed production; and finally the producers and the consumers would both be starved into wiser courses, and perceive that nothing makes good for trade but profitable industry and judicious expenditure. Prodigality devotes itself too much to the satisfaction of present wants; avarice postpones too much the present wants to the possible wants of the future. Real economy is the happy measure between the two extremes; and that only "makes good for trade," because, while it carries on a steady demand for industry, it accumulates a portion of the production of a country to stimulate new production. That judicious expenditure consists in

"The sense to value riches, with the art
T' enjoy them."

Lessing, in one of his Eastern fables, thus pleasantly illustrates the folly of continued accumulation, without properly enjoying it. "It was a sultry day, and an avaricious old man who had hoarded a large amount was toiling away and wasting his little remaining strength, when a heavenly apparition stood before him; 'I am Solomon,' it said, with a friendly voice; 'what are you doing?' 'If you are Solomon,' answered the old man, 'how can you ask? When I was young, you sent me to the ant, and told me to consider her ways; and from her I learned to be industrious and gather

stores.' 'You have only half learned your lesson,' said the spirit; 'go once more to the ant, and learn to rest the winter of your years, and enjoy your collected treasures.'"

(To be continued.)

Holy Scriptures.

Because we assert the Holy Spirit to be the first, great, and general rule, and guide of true Christians, as that by which God is worshipped, sin detected, conscience convicted, duty manifested, Scripture unfolded and explained, and consequently the rule for understanding the Scriptures themselves, since by it they were at first given forth; from hence our adversaries are pleased to make us blasphemers of the Holy Scriptures, undervaluing their authority, and preferring our own books before them, with more to that purpose. Whereas, we in truth and sincerity believe them to be of Divine authority, given by the inspiration of God, through holy men: they speaking or writing them as they were moved by the Holy Ghost—that they are a declaration of those things most surely believed by the primitive Christians, and that as they contain the mind and will of God, and are his commands to us, so they in that respect are his declaratory word, and therefore are obligatory on us, and are profitable for doctrine, for reproof, for correction and instruction in righteousness, that the man of God may be perfect, thoroughly furnished to every good work. Nay, after all, so unjust is the charge, and so remote from our belief concerning the Holy Scriptures, that we love, honour and prefer them, before all books in the world; ever choosing to express our belief of the Christian faith and doctrine, in the terms thereof, and rejecting all principles and doctrines whatsoever, that are repugnant thereunto.

Nevertheless we are well persuaded, that notwithstanding there is such an excellency in the Holy Scriptures, as we have above declared, yet the unstable and unlearned in Christ's school often wrest them to their own destruction; and upon our reflection on their carnal constructions of them, we are made undervaluers of Scripture itself. But certain it is, that as the Lord has been pleased to give us the experience of the fulfilling of them in measure, so it is altogether contrary to our faith and practice, to put any manner of slight and contempt upon them, much more to be guilty of what maliciously is suggested against us; since no society of Christians in the world can have a more reverend and honourable esteem of them than we have.—*William Penn.*

The British Post-Office.—One of the first recorded facts concerning the establishment of the post in England is that of Edward IV., in 1481, being then at war with Scotland, establishing relays of horses, so that dispatches were conveyed to London in three days—a feat which was no doubt considered quite remarkable at the time. Letter posts were first established in the times of James I., for the conveyance of letters to foreign countries, suggested, apparently, by private enterprise, which had adopted the expedient in order to gain advantages in the markets. Not until 1635 was a post for inland letters established, when, by running night and day, the post went from London to Edinburg and back in six days. The time now occupied is fifteen hours. The carriage of letters was assumed by the government for the formation of a profitable monopoly, rather than to accommodate the public, and was unsuccessfully remonstrated against at the time as a usurpation of the rights of private enterprise. A penny post established in London in 1683, was likewise seized by the government, which granted the author a compensation. At first the mails were carried on horseback, then in coaches, an improvement suggested by a theatrical manager. Another, and the greatest improvement of all—the system of penny postages for all distances—was also suggested by a person having at the time no connection with the post-office—Rowland Hill. The money order office was originally the speculation of some clerks, and was not adopted as a branch of the establishment until 1838.

The increased importance of the Post-Office during the last few years is well illustrated by a comparison of its present with its former business. In 1763 the secretary of the department had one clerk and two supernumeraries; in 1854 there were 67 clerks in his office. At the same period the receiver general had two clerks, and the accountant general a deputy and one clerk; and their duties now united require 51 clerks. Two clerks sufficed to open all the dead letters in 1763; now 35 are employed. The packet service then consisted of four Harwich, six Dover, and five New York packets, at a cost of £10,000 a year; now the mail packets are 110, and $800,000 a year is paid for their service. The whole number of officers, postmasters, letter-carriers and clerks employed in the establishment at the present time, exclusive of those in the colonies, is 21,574. The number of post-offices in the United Kingdom in 1854, was 9973; in 1840 there were only 4028; and the mails are carried nearly 57,000 miles per day, at an average charge by rail of 8½d., and by coach of 2½d., per mile.

In 1839 the number of letters passing through the post-office was seventy-six millions, and in 1854, four hundred and forty-three millions—an increase of nearly six fold. Of these, nearly one half pass through the London Post-Office, and one hundred and three millions are delivered in London and the suburbs. About eighty-five per cent are enclosed in envelopes. Fifty-three millions of newspapers and three hundred and seventy-five thousand books passed through the London office in 1854. The money order offices now constitute a very important branch of the establishment, and number eighteen hundred and seventy-two. In 1854, 5,466,244 orders were issued, to the amount of £10,462,040, yielding, after paying all expenses, £16,538. The increase during the last five years has ranged from three to seven per cent.; in 1854 it was four and three quarters. Remittances of nearly ten millions and a half of pounds, present a striking picture of the active circulation of the capital of the country. The gross revenue of 1854 was £2,689,000—an increase of £98,000, or four per cent. over 1853. The expenditures were £1,413,000, an increase of three per cent. Total net revenue £1,276,000. During the late war the average number of letters sent to the army was 45,250, and the number received from it 43,125. These facts exhibit in a strong light the blessings which flow to the people from the establishment of cheap postage, and also afford a good index of the progress of education among the masses. A cheap press and cheap postage are two of the mightiest instrumentalities of modern civilization.

Epistle of George Fox.

After a little time I wrote a letter to the council, to lay before them their unchristian dealing in banishing me, an innocent man, that sought their salvation and eternal good; a copy of which letter here follows:—

To the Council of Edinburgh.

Ye that sit in council, and bring before your judgment-seat the innocent, the just, without showing the least cause what evil I have done, or victing me of any breach of law, and after banish me out of your nation and country, wi telling me why, or what evil I had done; thou told you, when ye asked me how long I would st the nation, that my time was not long, (I spo innocently,) and yet ye banish me. Will nc think ye, that fear God, judge this to be wi ness? Consider, did not they sit in council Stephen, when they stoned him to death? Di they sit in council about Peter and John, they haled them out of the temple, and put out of their council for a little season, and council together, and then brought them in and threatened them, and charged them to no more in that name? Was not this to sto truth from spreading in that time? And ha the priests a hand in these things with the m trates? and in examining Stephen, when he stoned to death; was not the council gath together against Jesus Christ to put him to de and had not the chief priests a hand in it? W they go to persecute the just, and crucify the do they not then neglect judgment, and mercy justice, and the weighty matters of the law, w is just? Was not the apostle Paul tossed up down by the priests and the rulers? Was John the Baptist cast into prison? Are ne doing the same work, showing what spirit y of? Now do ye show the end of your pr sion, the end of your prayers, the end of your gion, and the end of your teaching, who are come to banish the truth, and him that is cor declare it unto you? Doth not this show tha are but in the words, out of the life, of the phets, Christ, and his apostles? for they did use such practice as to banish any. How d receive strangers, which is a command of among the prophets, Christ, and the apos Some by that means have entertained ange unawares; but ye banish one that comes to the Seed of God, and is not chargeable to a you? Will not all that fear God, look upon to be spite and wickedness against the truth? are ye like to love enemies, that banish friend? How are ye like to do good to them hate you, when ye do evil to them that love How are ye like to heap coals of fire on heads, that hate you, and to overcome evil good, when ye banish thus? Do ye not mar to all that are in the truth, that ye have not christian spirit? How did ye do justice to when ye could not convict me of any evil banish me? This shows that truth is banished of your hearts, and ye have taken part against truth with evil doers; with the wicked, en priests, and stoners, strikers, and mockers in streets: with these, ye that banish, have taken Whereas ye should have been a terror to t and a praise to them that do well, and succ of them that are in the truth; then might ye been a blessing to the nation; ye would not banished him that was moved of the Lord to the Seed of God, and thereby have brought names on record, and made them to stink in to come among them that fear God. Were no magistrates stirred up in former ages to pers or banish, by the corrupt priests? and did no corrupt priests stir up the rude multitude ag the just in other ages? Therefore, are your st like Sodom and Gomorrah. Did not the and the priests make the Gentiles' minds en against the apostles? Who were they that w not have the prophet Amos to prophesy at king's chapel; but bid him fly his way? when Jeremiah was put in the prison, in the geon, and in the stocks, had not the priests a

the princes in doing it? Now see all that in this work of banishing, prisoning, persecut- whether they were not all out of the life of t, the prophets and apostles? To the witness od in you all I speak. Consider whether were not always the blind magistrates, who d their sword backward, that knew not their ls from their foes, and so hit their friends? magistrates were deceived by flattery.

1657. G. F.

"For The Friend."

From Household Words.

(Concluded from page 389.)

's everything that crawls a VERMIN, deserving to be crushed under foot? Mr. Douglas's report sects-doing would lead us to respite many le victims, and at least amuse ourselves for le with their drolleries, before carrying the nce of death into execution. The larvæ of the y little Exapata gelatella are internal feeders, g principally IN the decayed branches of white- , and, in a great many instances, under the of the living stem. The apple-moth, a beau- little creature, whose wings are studded with y-shining specks, as though they were inlaid precious gems, is hatched from an egg laid, in middle of June, in the crown of an infant apple. oon as the egg hatches, the young grub gnaws y hole, and soon buries itself in the substance e future fruit. He takes care to make himself ntilator and dust-hole, and then progresses to centre of the apple, where he feeds at his ease. n within a few days of being full-fed, he, for irst time, enters the core through a round hole ved in the hard, horny substance, which always rates the pips from the pulp of the fruit, and destroyer now finds himself in that spacious nber which codlings in particular always have eir centre. From this time he eats only the never again tasting the more common pulp, h hitherto had satisfied his unsophisticated pal- now, nothing less than the highly-flavoured natic kernels will suit his tooth, and on these, a few days, he feasts in luxury, till it is time for to eat his way out again. The larvæ of many hs and butterflies, when tired of their present tence, hang themselves; but the act is anything suicidal. They step out of their coffins as neat ew pins, smartly dressed in a fresh suit of clothes. at do you think of eggs that grow, and of eggs have eyes? It would certainly be convenient e could introduce a race of poultry whose oval duce should possess the former qualification of easing in size as they lay in the egg-basket, ugh inexperienced house-keepers might feel a e trepidation at the angry glances shot by eggs eatened with a higher temperature than that re- red for hatching. In the insect world such facts occur. The abominable though glossy and zy-winged fly, which is the development of the ous gooseberry-grub, lays very soft and half- nsparent white eggs. After the first day, these s begin to grow, and before the end of a week, y have grown to three times their original size. e head of the egg always lies towards the tip of gooseberry-leaf, for the convenience of looking for squalls, and is remarkable for having two ck eyes, placed very far apart and quite on the es.

"The humming-bird sphinx does not sit down to e its meals, but feeds, as the lark sings, on the ng, which most people would fancy to be very comfortable as well as difficult. But insect ec- ntricities are endless. Aphides think fit, during e whole of summer, to increase, like tiger-lilies, buds; just as Sir Thomas Browne wished that mankind could be increased, like willow-trees, by cuttings. A late intelligent orang outang was fond of taking a lady's shawl, politely and with permis- sion, from her back, and of strutting up and down with it displayed on his own hairy shoulders; in like manner, the larvæ of the Coleophora gryphi- peanella moth borrows the loan of a coat from a rose-leaf. Not content with eating the parenchyma, or fleshy substance between the upper and under skins of the leaf, it makes a covering for its body from the upper skin only, using as much as it wants for its wrapper, which it folds round itself in the most becoming style, leaving one end open, through which it protrudes the head and segments bearing the legs; thus attired, it walks about, always carry- ing its clothing with it, which, as the tenant grows, is increased from time to time by additions of more leaf. Comical things are these moving cones; like tipsy men, they seem always to be in danger of toppling over. But this mishap rarely occurs; and if by accident the caterpillar do lose its hold, it does not fall, but swings down gently by a silken thread kept in readiness for such accidents. One of the beautiful metallic Adelæ, or long-horned moths, Nemotois cupriacellus, is a sort of Amazon, having sent the gentlemen of their community so completely to Coventry, that the male insect is unknown to collectors; none but females have ever been cap- tured. Our only hope of getting at the masculine gender lies in the astuteness of Mr. Doubleday. That gentleman, a very Ulysses in his dealings with things that fly by night, discovered the attractive powers of sallow blossoms, and about the same time found out that a mixture of sugar and beer, mixed to a consistence somewhat thinner than treacle, is a most attractive bait to the Noctuinæ. The revo- lution wrought in our collections, and our knowledge of species since its use, is wonderful. Species that used to be so rare, that it seemed hopeless to think of possessing them, and others not then known at all, have become so plentiful by the use of sugar in different localities, that they are a drug in the hands of collectors and dealers. The mixture is taken to the woods, and put upon the trunks of the trees, in patches or stripes, just at dusk. Before it is dark some moths arrive, and a succession of comers con- tinues all night through, until the first dawn of day warns the revellers to depart. The collector goes soon after dark, with a bull's-eye lantern, a ring- net, and a lot of large pill-boxes. He turns his light full on the wetted place, at the same time placing his net underneath it, in order to catch any moth that may fall. Some species are very fond of this trick; others sit very unconcerned; and others, fly off at the very first glance of the bull's-eye. Once in the net a moth is easily transferred to a pill-box, where it will remain quiet until the next morning. There are some sorts, however, that will not put up with solitary confinement so easily, and fret themselves, that is, their plumage; so it is bet- ter to pin and kill them at once. It is of no avail to use sugar in the vicinity of attractive flowers, such as those of sallow, lime, or ivy. Wasps and bats also come, but not to the collector's assistance. The former are attracted by the sweets, the latter by the moths; and you may see them go in before you, and pick off a beauty that you would not have lost for half-a-dozen sugar-loaves.

"In July you may see the females of the Thecla quercus walking about on the leaves of the oak trees, sunning themselves, while the males are flut- tering in attendance, or are pertinaciously holding a tournament in honour of their dames. In these pugnacious encounters they maul each other severe- ly, and you can hardly capture a male whose wings are free from scratches and tears. It is a pity that some sort of entomological police cannot compel such quarrelsome butterflies to keep the peace. The Tineinæ, not so named because they are tiny, have also their characteristic peculiarities. When basking on palings, Argyresthia sits with her head down- wards, as in a posture of reverence. Gracillaria and Ornix, on the contrary, hold up their heads, bold and pert; Elachista looks as if it tried to squeeze itself into the wood, and Nepticula hugs a corner or crevice, and then, as if not satisfied with its station, hurries off to seek another, with a self important swagger truly ridiculous in such a little creature. Owing to the variety of economy amongst the larvæ of these tiny moths, there can be no general rules laid down for finding them; some are on the leaves, some roll up the leaves, others mine in their substance; some are in the flowers, others in the seeds; some are in the stems, others in the roots; some wander about naked as when they were born, others make garments neat and tidy, or rough and grotesque. There is only one rule to be observed.—Search a plant all over, and at different times of the year. You may not find the species of which you were in quest; but, then, you may discover another whose economy is unknown; or, as already more than once has happened, one not hitherto even seen in the per- fect state. Thus, if you collect the dry flower-heads of wild marjoram in spring, and put them in a box in-doors, you will soon see what appear to be some of the dry calyces of the flowers, separated from the mass and walking about. Each of these contains a living larvæ of Gelechia subocellea, which has made itself in the previous autumn a portable dwel- ling out of two or three of the flowers, in which it will remain until the following July, when the per- fect moth will emerge. In their habitat among the dry florets these cases can scarcely be distinguished from them.

"In addition to the obvious and unavoidable difficulties which entomologists have to encounter, they have to bear up against the martyrdom of con- tempt which the vulgar-minded public inflicts upon them. They are ignominiously nicknamed bug- hunters, and are regarded as a species of lunatic at large. But astronomers and chemists have been equally despised. Galileo, Tycho Brahe, Priestly, and even Davy, have been pitied in their time, es- pecially in the early part of their career, as foolish enthusiasts, whose proper place would be the mad- house, if they were not harmless. To this day, Newton, though looked up to as a philosopher by all, is looked down upon as a madman by many. What was the good, the crowd inquired, of star- gazing and pulling the elements to pieces? But great good, and profit, and safety, and lofty wisdom have been derived from studying the structure of the heavens—that is, of the universe—and from investigating the essential nature of the crude ma- terials which compose our globe. It is not during its infancy that a science displays its wealth and lavishes its benefits. Entomology may have results in store that we wot not of. Mr. Douglas is per- suaded that many things in the structure and phy- siology of man that are obscure may receive a light from the study of the anatomy and reproduction of insects.

"But how are you to fathom the mysteries of in- sect economy, if you do not pursue and familiarize yourself with insects? Notwithstanding which, it is quite true, as our secretary says, that society throws a wet blanket over entomology in all its branches. Take your water-net and go to a pond or stream in quest of water-beetles, and the passers- by, if they notice you at all, will invariably think you are fishing; or, if they see what you are taking, will ask you if your captures are for baits. If you say Yes, they will think yours a profitable employ- ment; if you say No, you may add as much more

in exculpation as you like, you will only pass for a fool. So much for the popular appreciation of natural history—and for your encouragement."

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 389.)

EDWARD BARTON.

Edward Barton was born in the year 1683. He early in life submitted to the cross of Christ, and became very serviceable in religious society. He was first employed as an overseer, then was appointed an elder, in each of which stations he was much esteemed by his friends. A gift of the ministry of the gospel being conferred upon him, he exercised it to the satisfaction of the church. He was in good repute in his own religious Society, and amongst his neighbours, closing a useful life in the Second month, 1737, much lamented. He was 54 years old. He resided at Mansfield, N. J.

WILLIAM BLAKEY.

This valuable Friend, and elder of Falls Monthly Meeting, deceased Twelfth mo. 4th, 1737.

EDWARD JONES.

This Friend was born in Wales, about the year 1645. He was among the first settlers of the "Welch Tract," and we find him a useful man in religious society, soon after his arrival in this country. He was for many years a member of the Meeting of Ministers and Elders, and was actively engaged in labour for the good of others until very advanced age. About the close of 1737, Thomas Chalkley writes: "The 26th of the Twelfth month, being the first day of the week, was buried at Merion, Edward Jones, aged about ninety-two years. He was one of the first settlers of Pennsylvania, a man much given to hospitality, a lover of good and virtuous people, and was beloved by them. There were many hundreds of people at his funeral. I had a concern to be at this meeting before I left my place at Frankford, and before I heard of this Friend's death."

JOSEPH KIRKBRIDE.

In one of three ships which arrived in the Delaware, in the year 1681, was a lad named Joseph Kirkbride. It would appear that he was not then a member of the religious Society of Friends, and probably was quite poor as to earthly treasure. He had had, however, a sufficient education to qualify him for an active business man, and through a timely surrender of his will to the cross of Christ, he was early prepared for religious usefulness. He settled in Bucks county, where he was soon found a member of the Society of Friends, and a minister of the gospel of Christ. Being a man of good natural parts, he speedily became noted, and was much looked up to by his neighbours. In respect to his importance in the Province, the historian Proud says: "He is an instance, among many others that might be given, in the early times of this country, of advancement from low beginning to rank of eminence and esteem, through industry, with a virtuous and prudent conduct. The difficulties, hardships, and trials of many of the well disposed early settlers, however low in the world, rather visibly tended to their promotion, and in some respects rendered them more useful and worthy members of society in this new country; while others, even possessed of handsome patrimonies, at first, but more improvident, and less accustomed to encounter with such difficulties, &c., more commonly went to ruin, or were reduced to indigence; besides, a dependence on such inheritances, even with otherwise prudent economy, in the early time of this country, where, and when, servants could scarcely be had, or kept, by any means, several worthy persons, who had not been used to labour, found, by sorrowful experience, did not answer here, as in Europe; so that for a series of years, those who came hither more wealthy, and had before been used to a different manner of life, sometimes lost much of what they had possessed, and were reduced to greater straits and trials, than the more poor and laborious part of the settlers, who were generally more numerous, and got estates; hence it became noted for being a good poor man's country. This Joseph Kirkbride was afterwards a preacher among the Quakers; and, for many years in the magistracy, and frequently in the Assembly."

Joseph Kirkbride joined with his friends in their testimonies against George Keith, signing that issued by the ministers, as well as that of the Yearly Meeting. Of his first marriage, we have no record, save that he was left with several children; but his second wife was Sarah Stacey, daughter of Mahlon Stacey, an exemplary, pious woman, who died in a few years. Of this pious, consistent christian, whose life was an example of dedication, and whose death was without fear or dismay, we have already given an account.

In the First month, 1699, he informed his friends of the General Meeting of Ministers of a concern that attended his mind to pay a religious visit to England. Finding he had not spread the concern before his own Monthly Meeting, he was recommended so to do. At the next General Meeting of Ministers, held in the Fourth month, he once more opened his concern, producing a certificate of the unity of his friends at home. After weighing the concern, he was set at liberty to fulfil his prospect.

Anthony Morris wrote a letter to a Friend in England, dated Fourth mo. 12th, 1699, in which he says: "I send this by my very good friend, Joseph Kirkbride, whom I hope the Lord will attend with his presence, and keep him near to himself, and within his own protection; and if it be his good pleasure, return him safe to his family." Samuel Carpenter, in a letter, says: "This is intended to be sent by our dear friend, Joseph Kirkbride, who is gone down towards the ship; they are to be at Salem to-morrow, and take their departure from Elsinborough."

Whilst in England, the warm attachment of his friends at home is manifested in various letters extant. He appears to have made a satisfactory visit, returning with his friend and fellow-labourer in the gospel, Walter Fawcett, early in 1701.

He was diligent in the prosecution of his religious duties, but it may be that his public civil appointments did in some measure restrain him in his travels abroad. He was often employed in the Yearly Meeting on important services, writing many of the epistles of that body, particularly those to London, during the latter part of his life. In the year 1710, he paid a religious visit to New England, which is the last gospel labour, out of the limits of his own Yearly Meeting, of which we find a record.

Proud says: "He is said to have been an exemplary and zealous promoter of the religion of his profession; and a very serviceable person in divers respects and capacities." Smith says: "He finished his course in the unity of his brethren, in which he had lived near fifty years."

His death took place, First mo. 1st, 1738.

ROBERT EVANS.

Robert Evans was born in Wales, about the year 1657. His mind was turned from a depend on forms and ceremonies, whilst in his native try, and he frequented the meetings of Fri although not considered as a member. In year 1698, he removed to Pennsylvania, and one of the first settlers at Gwynnedd. He soon entered into close fellowship and unity with Fri giving good evidence of his convincement o doctrine of Truth, by the consistency of his wa the church, and amongst men. His memorial s "He was a very diligent frequenter of our r ings, and we have reason to hope, from his and grave deportment therein, that he stro such times to withdraw his mind from the r intruding objects and cares of this life, to a that calmness of soul, which fits the heart for ception of the divine Teacher, and manifested his dwelling was in heavenly places."

After a time of faithful dedication in private he received a gift in the ministry, which was tended with divine life and sweetness." " private life was attended with innocence and plicity." His death took place in the First mo 1738.

Thomas Chalkley says: "The latter end of First month I was at the burial of Robert Ev of North Wales. He was upwards of fours years of age, and one of the first settlers there. man, who lived and died in the love of God his neighbours, of whom I believe it might be t said, as our Saviour said of Nathaniel: 'Behol Israelite, indeed, in whom is no guile.' He w minister of Christ, full of divine and religious ter."

(To be continued.)

For "The Friend

Guano.

The following remarks upon the subject of gu as a fertilizer are compiled from a recent Ger publication, entitled "A familiar exposition of Chemistry of Agriculture, addressed to farmers. Dr. Julius A. Stockhardt, Professor in the r Academy for Forrestry and Agriculture, at Thar Saxony."

The author states that the kingdom of Sax consumed more of this manure than all the rem ing states of the German Zoll-verein together; an experience of nine years had brought it very extensive use.

The objections against the use of guano from high price it commands, are removed by the that its fertilizing properties are offered in a centrated form; and with the presence of quate heat and moisture, are brought into mediate action. Its operation, if not lasting, is so vigorous, that even in the first year of its ap cation, the capital expended is restored with ab dant interest; hence its diminished activity af wards is not a valid objection to its use. Anot objection is the risk of getting a spurious arti But chemistry offers a means by which the far may protect himself against such a risk, if he take the trouble to apply a few simple tools, to afterwards mentioned.

1. SOURCES AND CONSTITUENTS OF GUANO.

Guano we know, is composed of the excreme of sea birds, which have accumulated upon inhabited islands and rocks. Good guano co to us from those zones of the earth in which never or seldom rains, and from islands sufficien elevated above the sea to protect it from the ov flowing of sea-water, by which its strength wo be greatly diminished; and hence the infer quality of that brought from Chili and Patagon since these countries are inundated with heavy ra

The best guano comes from the rainless region of Peru. Here it covers the rocky surfaces of the islands in layers like our clay strata, varying from one or two to twenty or thirty yards sometimes even more. In the first year in which a layer of guano is deposited it has a white color, and is called *guano blanco;* this is accounted the best, and is bought from the Peruvians at half the price which is given for the brown. It possesses nearly the same constituents and produces the same effects as our pigeon-manure; but the action is more energetic, because it is richer in the nitrogenous substances. The reason of this difference consists in difference of food. That of sea-fowl consisting of fishes, whilst our pigeons take a purely vegetable nourishment. An animal diet is always richer in nitrogen, and furnishes for this reason a manure that abounds more in this element than a vegetable diet. The layers which succeed the white have a light grayish brown colour, further down they become darker, and at the lowest rust-coloured.

The author think that those countries which are in want of availing themselves of the use of guano as a manure, will be the first to arrive at that state of cultivation in which they can do without its assistance. This high cultivation will be attained only, through the augmented produce of fodder and straw, produced by means of auxiliary manure, as much natural manure is produced as will be requisite to manure the whole farm.

Of the different kinds of guano the Peruvian is esteemed the best, all others are of little worth unless more or less washed out.*

The author then offers the following analysis of the different kinds of guano.

100 lbs. were contained:—

stituents	1. Peruvian.	2. Peruvian.	3. Saldacha Bay.	4. Chilian.	5. Patagonian.	6. African (more recently found).
	1850	1851	1847	1848	1850	1850
are	10	8	8	20	6	15 lbs
astible, or volatile) rogenous substances	59	65	22	11	15	13 "

gen contained in 1 lbs.	12¾	13½	13¼	¾	1¼	9-10
e of 100 lbs. com- ted in accordance h the constituents	$2.85	3.08	1.03	.82	1.05	.75
ent price in Germany 100 lbs. . . .	$3.25	3.25	2.25 to 2.75	2.25 to 2.75	2.25 to 2.75	2.25 to 2.75

Of the above mentioned constituents, nitrogen is the most valuable. It is this which imparts to guano that wonderfully strong forcing power for which it is so highly prized. In the fresh excrements of birds, nitrogen is contained principally in the form of uric acid, in precisely the same way as the urine of cows, sheep, &c., whereas, in the putrefied bird manure as found in guano, the uric acid has been already converted, as in putrid urine, into *ammonia*, or more properly into *ammoniacal salts*, which are readily soluble and digestible by plants. These are, therefore, to regard guano as a manure, that has undergone complete *putrefactive fermentation*,—as *putrid drainings in a solid form;* and this is owing to this circumstance that it attains its full so *quickly* and begins to act *instantaneously* when applied to moist lands.

In good guano, nearly one half consists of salts of ammonia, whereas inferior specimens contain much less of them. The author says that, notwithstanding its high price, guano offers the *cheapest source for procuring ammonia.*

At ordinary temperatures the ammoniacal salts contained in guano are not volatile, since the acids generated in the process of putrefaction (humous acid, oxalic acid, &c.,) operate in the same way as sulphuric acid in fixing the ammonia. Hence it need not be apprehended that guano will lose greatly in strength by long keeping. Upon being heated, however, the substances fly off.

Next to nitrogen or ammonia (which is formed by the union of nitrogen with hydrogen) *phosphoric acid* must be considered the most valuable constituent of bird manure. It is formed here in combination with lime, hence in anlayzing it is called *phosphate of lime.* When guano is subjected to heat, it is left as a residue in the ashes, since it is neither combustible nor volatile. The more phosphate of lime (ash) and the less ammoniacal salts (combustible substances) contained in guano, the less it is worth. Good Peruvian guano contains from one-fourth to one-third phosphate of lime; African, Patagonian &c., from three-fourths to four-fifths. It has been said that the remarkable efficacy of guano is chiefly due to the phosphate of lime it contains, but the assumption is refuted by the fact that the inferior guanos contain the most of it.*

The remaining constituents of guano, such as salts of potash or soda exist in such small amounts, as not to be worthy of appreciation.

2. OPERATION AND APPLICATION OF GUANO.

Under this head the author deems good guano as the *most forcing* and the *most rapidly efficacious* manure at the command of German agriculture; and this value is due to the nitrogen or ammonia it contains. From this property it is, that he considers it especially adapted for *auxiliary manuring.* In it the farmer possesses an excellent means of *improving common stable manure,* and increasing its effect. Stable manure is poor in nitrogen, for one load contains scarcely more of this element than half a hundred weight of guano. The nitrogen of the former is incapable of being taken immediately as food by plants, for it has not yet thoroughly undergone putrefaction; it becomes gradually fit for vegetable nutriment by lying in the earth. Hence, a small addition of guano will produce an extraordinary effect; affording immediate nourishment to young plants, (at a time when it is particularly needed) until a further supply is developed by the further putrefaction of the stable manure, and they can consequently take on, from the first, a more vigorous and rapid growth. In this way, then, the farmer rears a vigorous seed plant.

Another advantage is, that unfavourable weather is less injurious in its action upon such vigorous plants, for it is a natural inference that they should suffer less than those that are feeble. Saxon farmers, moreover, like the English, have observed that germinating seeds when manured with guano are less subject than others to injury from worms and insects. Potatoes so manured are seldom attacked by worms, and in like manner fields which were manured during the preceding autumn with guano, suffered but slightly from slugs, whilst other fields were devastated by these vermin.

Whether guano is introduced into the ground at the same time with the stall-manure, or at seed time, or again is scattered over the already germinating plant, is a matter of comparative indifference, provided only it arrives in sufficient time for plants to make free use of it, particularly, during their early growth.

The farmer should make use of guano as a universal strengthening remedy for sowings of all kinds that have suffered by a severe winter, or which from deficiencies in the soil and and other causes, are backward in their growth. If in the early spring such sowings are sprinkled over, according to their condition, with from 150 to 200 lbs. of guano per acre, an extraordinary result may be calculated upon, and more particularly in winter wheat, because its vegetation proceeds but slowly in the spring, &c. By "*reinforcements,*" plants which are particularly backward in certain portions of the field, may be so invigorated, that a very unequal condition of the crop may be converted into uniformity of growth.

Guano may thus be advantageously used even by the farmer who possesses an abundance of stable manure, for none can operate so speedily or be so conveniently applied. Old compost earth often sprinkled with urine, would approach the nearest to it.

Good guano, consisting of thoroughly decayed excrements, in which the combustible or organic and the incombustible or mineral constituents are all present, it can be just as properly applied as an *independent manure,* as rotten dung; and will have a decided preference over the latter whenever a brisk and vigorous action is required.

As a manure it is of the *greatest benefit* to *oil-bearing plants* of all kinds,—to rape, beet roots, rocket, &c.—as also to *potatoes;* next to these, to *wheat* and *rye;* then to *barley, tares* and *peas;* and finally, to *oats.* The descending scale of utility here intimated, is by no means so great, however, as to render the application of guano to the crops last mentioned otherwise than extremely advantageous.

Besides this, guano has proved exceedingly beneficial and profitable as a manure for *green crops, roots, grass and garden produce* of all kinds; for example, celery, parsnips, onions, asparagus, cabbages, the egg plant, lettuce, strawberries, currants, &c.

(To be concluded.)

Photography under Water.—In the Journal of the Society of Arts, W. Thompson, of Weymouth, Eng., gives an account of the means he adopted for taking a photograph of the bottom of the sea, in Weymouth Bay, at a depth of three fathoms. It appears that the camera was placed in a box, with a plate-glass front, and a movable shutter to be drawn up when the camera was sunk to the bottom. The camera being focused in this box on land for objects in the foreground, at about ten yards or other suitable distance, was let down from a boat to the bottom of the sea, carrying with it the collodion plate, prepared in the ordinary way. When at the bottom the shutter of the box was raised, and the plate was thus exposed for about ten minutes. The box was then drawn into the boat, and the image developed in the usual manner. A view was thus taken of the rocks and weeds lying at the bottom of the bay. W. Thompson anticipates that it will be a ready and inexpensive means of arriving at a knowledge of the condition of piers, bridges, piles, structures, and rocks under water.—*Scientific Amer.*

Nothing does reason more right, than the coolness of those that offer it; for truth often suffers more by the heat of its defenders, than from the arguments of its opposers.

* I know not whether what is known as Columbian guano may not be an exception.

* Such is the prevailing ignorance of the essential constituents of good guano, that in one of our daily papers there is an advertisement of a quantity for sale, from Pedro Keys, and as a proof of its superior value as guano, it is stated to contain 70.10 per cent. of "bone phosphate of lime," which at once designates it as an inferior article—and, if it really contains *bone* phosphate, an adulterated one.—M.

For "The Friend."

William Dewsbury.

(Continued from page 390.)

In the Twelfth month, 1655, William Dewsbury obtained his liberty, and in the Third month following, we find him at a meeting near Northampton, no mention being made of his having returned home in the interval. Here he narrowly escaped another imprisonment, being actually seized at the meeting, in company with several other Friends, who were sent to the very dungeon he had so lately occupied, and were confined there a considerable time. On this occasion his detention was only temporary, as he was soon dismissed. It appears that the downfall of James Nayler, who was a brother beloved by him, was peculiarly affecting to William Dewsbury, and led him to extend counsel to him to promote his recovery. He had watched over and yearned towards his offending brother, and had seen with clearness the steps by which he had fallen, and the subtle snares which Satan had laid for his feet, by which through unwatchfulness he became entangled. These he traced out to him, reminding him how it had been with him in the hour of his temptation, and telling him where it was the enemy had got entrance, so as to prevail over him and others—how they had given way to a spirit of self-exaltation, by not abiding in the Truth, nor in the light, nor in the grace by which we are saved, and by which alone the soul can be kept out of the reach of all delusion, deceits, and vain imaginations; and from an undue admiration of persons, and how they had proceeded to cry out against those who kept their habitations in the power of God. In a letter to him, he says, "Dear James, I beseech thee, in tender love in the Lord Jesus, wait singly in his counsel, to give thee an understanding to discover the working of this deceitful spirit. Notwithstanding all feignedness, that ground is to set up a master in the earth, and so make strife amongst brethren." "And what hath been done in the hour of temptation, let the light and life judge it out; that in the light and life of our God, the whole body may grow in the unity of the Spirit, to bear one another, to serve one another, build up one another, that amongst all there may not be any master but Christ, our Head." This affecting address closes with these pious ejaculations in prayer—"God Almighty! restore to a pure understanding all those that have been veiled; in thy life keep them in unity with all thy elect, to serve thee with faithfulness unto the end, Amen!" James Nayler's reply manifests a clear and becoming frame of mind, and the testimonies which he gave against the spirit of delusion with which he had been carried off the true foundation, show the deep humiliation he passed through, and the strong desires he felt to be restored to the unity and fellowship of his true friends.

Speaking of a journey to London, and of the dealings of the Lord with him in the course of it, William Dewsbury says: "Who hath restored many captives, and brought in many that were turned aside, in much brokenness of heart, in the sense of his mercy in their recovery." "I was led of the Lord," he continues, "into London, according to his will, in the services he had determined at that time, in that place. I was much filled with comfort, to behold his appearance amongst his people, who did mightily refresh his babes with his own presence. The Lord laid it upon me that G. F. and J. N. might meet together. My travail was great in spirit, until the Lord answered, which in the day he determined, was done. Mighty was his majesty amongst his people, in the day he healed up the breach, which had been *so long to the sadness of the hearts of many.* The Lord *clothed my dear brethren*, George Fox, Edward Burrough, and Francis Howgill, *with precious wisdom; his healing Spirit did abound within them*, with the rest of the Lord's people there that day, according to their measure; and the Lord was with J. N., and ordered him by his Spirit, so that the measure of the Lord's Spirit in all, reached to embrace it with gladness of heart." They mourned deeply over breaches in the Society, and fervently laboured for the restoration of those who lost their places in the Truth—and when these returned to the fellowship of the household of faith, it was cause of great joy.

After seeing the desire of his heart in London, he was set free to pass through Surrey to Bristol, to be there the next First-day, the 5th of the Twelfth month. On the first visits of Friends to this town, great disturbances were made by the rabble, incited by the priests, and encouraged by the magistrates, perhaps not more than two years before his coming there. It would appear from his account, that their evil conduct was continued. He says: "The Sixth and Seventh days before we came, the apprentices and other rude people were running with naked swords in their hands, up and down the streets, so thronged that it was hard to pass through them. On First-day, I was at the meeting; the Lord chained them all down with his almighty power, in which the meeting was precious, and his people, comforted with living refreshings in his presence, were preserved in peace, without the least disturbance. The next day they were more rude than formerly, some beating their masters, and not suffering the shops to be opened, threatening Friends who opened theirs, not regarding the mayor or any of his officers—many times running into Friends' houses, but had not power when they came, to do any harm. Hearing of a meeting to be on the 7th of the month, at Edward Pyotts', the rulers gave out that they would break it up. When we were met together in the name of the Lord, one swearing and blaspheming the name of the Lord God of heaven and earth, said he would cut the Quakers as small as herbs for the pot; and to perform his bloody intent, he went for the guard to take a halbert, that he might satisfy his blood-thirsty spirit. The God of our safety suffered it to be, that the guard would not let him have the halbert; so strife arose among them, and the pit he digged he fell into, for he was run through the body. The meeting was precious in the life of our God, in which Friends parted with joy in the Lord. The Lord bound the hands of those wicked men, though they called on one another to kill Friends as they went in at the gates, and were full of madness that they had missed the opportunity in which they intended to do such mischief. About eight o'clock in the evening, they came to Edward Pyotts', certain Friends being there, some out of New England, who had been banished from their wives and children, on pain of death. We were bowed down before our God, and prayer was made unto Him; when they knocked at the door, it came upon my spirit it was the rude people, and the life of God did mightily arise, and they had no power to come in, till we were clear before our God. Then they came in, setting the house about with muskets and lighted matches, and then into the room where A. Stoddart was with me. I looked upon them, on which they cried out, 'We will be civil; we will be civil.' I spake, 'See that you be so.' On this, they ran forth of the room, and came no more in, but ran up and down the house with their weapons in their hands. And the Lord God, who is the God of his seed, against whom no weapon that is formed shall prosper further than he sees shall be for his glory, and the comfort of his people, caused their hearts to fail, and they passed away, and not any harm was done to any of us; blessed be the God of our i After another precious time with Friends, I away with much clearness and freedom, fro city, Friends being very precious in the do of the life of God, in which they eyed his who had brought up John Audland and oth thren, to strengthen them to stand under trials."

He crossed over into Wales, and attended ings at Leominster, Worcester, and Tewkesb which the Lord satisfied the desires of his with his presence, and Friends did minister Lord moved. He went through Norfolk, S and Essex, and came to London, where he ap to have tarried something less than six week then moved forward into Kent, whence, in an e dated 22d of the Third month, 1657, he giv following counsel to ministers:—"I lay it upo wait for the Lord to seal unto you his mind in his movings you may answer his will in and works. The light will guide you to kno intent of every motion, that in it you may approved in the integrity of your hearts to And every one, in particular, be faithful i power of God, that in all the movings of the of life, the earthly wisdom, with all its reas and consultings be judged out; and all may the new man in Christ, and the new bottle tha serves the new wine, which is committed to y the kingdom of God, to refresh your souls, make them glad in his presence; and so mi in his living power and wisdom, to the refresh of the weary and oppressed soul, with the co of the Spirit of life, in which your souls are glad in God. So will you all come to the ministry in the life. And as you are mov God, be faithful; strangle not the birth, n quench the movings [of the Holy Spirit;] an the presence of the Lord, I warn you, wait f understanding in the life to lead you. Neithe to, nor diminish; so will death with all its form be kept out from amongst you." This coun as needful to be followed as at that day. A titude of words without the salt, and authori the kingdom of Christ, will bring death, and den the living members of the church. El without being quickened by the life, will n likely to discover the want of life, nor give r eous judgment, so as to support the true, and countenance the false ministry.

(To be continued.)

Scene in Japan.

After a march of ten miles along the picture shore, we reached one of the loveliest spots on island. It was a village perched on a bold montory, overgrown with the pine, banyan, sago palm, at the mouth of a charming valley w opened up between the hills to the base of the peak behind Barrow's Bay. A stream of s water threaded the valley, which was covered the freshest verdure, and overhung with beau groves of pine. It was a picture of pastoral lo ness such as is rarely found in any country. thing struck me more during the journey than great variety of scenery which the island encl in its narrow compass. We passed through different districts which bore but the slightest semblance to each other, either in feature or racter. We had both the groves of the tropics the woods of the north; the valleys of Germ and the warm shores of the Mediterranean.

The village was large, thriving, and as ne laid out and hedged in as an English garden. scrupulous neatness and regularity of the Lew C villages was doubly refreshing to one familiar the squalor and filth of China. The sight of

gua, (public house,) which occupied the place
bour at the top of the promontory, completed
ptures. Its roof of red tiles glittered in the
a row of feathery sago palms threw their
at leaves over the wall of the enclosure; the
t and softest of mats covered the floor; the
h blazed with a profusion of flowers; and
noasins, seated on pedestals, contained fresh
for our use. Its aspect of comfort and re-
gras a balm to travellers as weary as ourselves,
directed Terry at once to hoist the stars and
p upon the roof. I hastened back to make a
of the beautiful valley before sunset, while Mr.
occupied himself with a view of the *cung-qua*.
erable old man, with a snowy beard reach-
arly to his knees, approached the bank where
but upon noticing me, made a profound yet
ed reverence, and retired. The village was
il Un na. We had not yet reached the re-
f fowls, but the people sent us two small fresh
ith a pumpkin and some cucumbers. For
eakfast, there were sent two long eel-like fish,
bling the gar, a few young egg-plants, and a
lt of sweet potatoes.—*Narrative of the Japan
pition.*

he River Amoor.—This magnificent river,
runs through the lower part of the Russian
sions, and empties into the head of the Gulf
Tartary, is navigable seventeen hundred miles
its mouth to the city of Nerthink, the capital
uthern Siberia. The country is densely popu-
and great results are anticipated by the ad-
rers, who propose opening a communication
en our Pacific possessions and the Russian
ie territory. Two successful voyages from San
isco to this river have already been made, and
eamship America, the first of a line of steamers
n between these points, cleared port on the 10th
month last.

new kind of Wheat.—The Detroit (Mich.)
ine of 24th inst., says:—Jonathan Dayton of
d Blanc, Gen. county, has grown this year some
sian wheat from seed procured by the Patent
e from the Island of Ivica, in the Mediterra-
sea, east of the coast of Spain. The berry is
, weighing 70 lbs. to the bushel. The spikes
large, bearing an enormous beard. It is
from insects, and twenty-four ears exhibited
sample, weighed six ounces.

From "Bell on the Hand."

(Continued from page 387.)

fter having examined the manner in which one
ument, the hand, is modified and adapted to a
ety of purposes in different animals, there re-
ns only this mode of elucidation—that we con-
it with its imperfect substitutes in other crea-
s. I might, indeed, have shown in the insect
s the most curious examples of instruments for
lar purposes with the hand and fingers of man;
H have intentionally confined this inquiry to the
er classes of animals.

he habits of some fishes require that they should
g firmly to the rocks or to whatever presents to
n. Their locomotive powers are perfect; but
are they to become stationary in the tide or the
am? I have often thought it wonderful that
salmon or the trout, for example, should keep
place, night and day, in the rapid current. In
sea, there are some fishes especially provided
n means of clinging to the rocks. The lump-
, *cyclopterus lumpus*, fastens itself by an ap-
atus which is on the lower part of its body. The
king fish, *remora*, has a similar provision on its
k. It attaches itself to the surface of the shark and to whatever is afloat; and, of course, to the bottoms of ships. The ancients believed it capable of stopping a ship under sail, and Pliny, therefore, called it remora. We must admire the means by which these fishes retain their proper position in the water, without clinging by their fins or teeth, and while they are free for such efforts as may enable them to seize their food. The apparatus by which they attach themselves resembles a boy's sucker: the organ being pressed against the surface to which the creature is to be fixed, the centre is drawn by muscles in the same manner that the sucker is drawn with the cord, and thus a vacuum is made.

Dr. Shaw tells us, that on throwing a fish of the species cyclopterus lumpus into a pail of water, it fixed itself so firmly to the bottom, that by taking hold of the tail, he lifted up the pail, although it contained some gallons of water.

In the cuttle-fish we see a modification of this apparatus: the suckers are ranged along their feelers or arms, and become instruments of prehension and of locomotion. They are capable of being turned in all directions, either to fix the animal or to drag it from place to place. In the Indian seas, these creatures become truly terrific from the length of their arms, which extend to eight or nine fathoms, and from the firmness with which they cling.

There is another fish, which from its name we should expect to perform strange antics; it is called harlequin angler. Its appearance is grotesque and singular; the pectoral fins resemble short arms, and are palmated at their tips. M. Renau, in his history of fishes, affirms that he knew an individual of this species; and the expression is not so incorrect, since he saw it for three days out of the water, walking about the house in the manner of a dog. The circumstance of its walking out of the water has some interest, as showing relations between organs which are apparently the least connected. The fact of this fish living out of the water is doubted; but the form of its branchial organs, or organs for breathing, inclines me to believe it; and its habits require such a provision. In this genus, the operculum, which covers the gills, does not open to let the respired water pass off freely behind, as in most fishes; but the water is discharged by a small aperture which, in Mr. Owen's opinion, is capable of being closed by a sphincter muscle. The cavities in which the branchiæ lie are large, and this is, indeed, partly the reason of the monstrous head of this fish. Thus, it has not only its fins converted into feet, but its gill-covers into pouches, capable of containing water, and of permitting the function of the branchiæ to proceed when the water is retired; that is, when it lies in mud, or shallow pools; for in such situations does the lophius find its food; and it angles for it in a very curious manner.

But there are other fishes that move out of the water on dry land, and even ascend trees, without being carried there by floods. The *perca scandens*, by means of the spines of its gill-covers, and the spinous rays of its fins, climbs trees; so that Dr. Shaw calls it the climbing fish.

All creatures which have their skins protected, whether by feathers, or shells, or scales, have an exquisite sense of touch in their mouth, or in the appendages which hang from it. Fishes have *cirri* which hang from their mouth; and these are equivalent to the feelers or tentacula of insects and crustacea. The fishing lines of the *lophius piscatorius* are examples of these processes: and Pliny relates that this frog-like fish, hiding in the mud, leaves the extremities of these filaments visible; which, from their resemblance to worms, entice the smaller fishes, and they become the prey of their concealed enemy. It is surprising how varied the means are by which fishes obtain their food. The *chætodon* squirts water at flies as they pass, and brings them down. The *sciæna jaculatrix*, according to Pallas, has a similar power; and the *sparus insidiator* catches aquatic insects by the sudden projection of its snout. It is affirmed by some naturalists that the rays of the dorsal and anal fins, as in the cordonnier of Martinique (*zeus ciliaris*, le blepharis, Cuv.,) are employed to grapple or coil round the stems of plants and sustain the fish.

The several offices attributed to these processes in fishes imply that they possess sensibility, if not muscular power.

By anatomical investigation and experiment, I, some years ago, discovered that the sensibility of all the head, and of its various appendages, resulted from one nerve only of the ten which are enumerated as arising from the brain, and are distributed within and around the head; and, pursuing the subject by the aid of comparative anatomy, I found that a nerve corresponding to this, which is the fifth nerve in man, served a similar purpose in all the lower animals. In creatures which are covered with feathers or scales, or protected by shell, this nerve becomes almost the sole organ of sensibility. It is the development of this nerve which gives sensibility to the cirri, which hang about the mouths of fishes, and to the palpa of the crustacea and insects. It is the same nerve which supplies the tongue, and is the organ of its exquisite sensibility to touch, as well as of taste. In some animals, especially in the reptiles, the tongue, by its length and mobility, becomes a substitute for these external appendages. We might have noticed before, that the tongue is an organ of prehension as well as of touch. With it the ox gathers in the herbage; and in the giraffe, it is rather curious to observe that as the whole frame of the animal is calculated to raise the head to a great height, so is the tongue capable of projecting beyond the mouth to an extraordinary extent, to wrap round and pull down the extreme branches of trees. The whiskers of the feline quadrupeds possess a fine sensibility through branches of the fifth nerve, which enter their roots. Birds have a high degree of sensibility to touch in their mouths. In ducks, and all that quaffer with their bills under water, the sense is very fine, and we find, on dissection, that a branch of the fifth nerve, remarkably developed, is distributed on the upper mandible. Animals feel in the whole of their external surface; and we may say that serpents, by coiling themselves round a body, have the organ of touch all over them. Still the fifth pair of nerves in the head, or the nerve analogous to it, is the main instrument of touch in the greater number of animals where extremities are wanting. There are organs varying in their conformation, sometimes delicate palpa, sometimes horny rods, and these are often possessed of muscularity as well as sensibility; but to all, the sense of touch is bestowed through a nerve corresponding with the fifth pair, the nerve of the tongue and lips, and of the muscles of the jaws in man.

But we may repeat, that, necessary as these appendages and this sensibility are to the existence of these animals, their imperfections serve, by contrast, to show how happily the different properties are combined in the hand; in which we perceive the sensibilities to changes of temperature, to touch, and to motion, united with a facility in the joints of unfolding and moving in every possible degree and direction, without abruptness or angularity, and in a manner inimitable by any artifice of joints and levers.

(To be continued.)

The Progress of Life.—Men rejoice when the sun is risen; they rejoice also when it goes down while they are unconscious of the decay of their own lives. Men rejoice on seeing the face of a new season, as at the arrival of one greatly desired. Nevertheless the revolution of one season is the decay of human life. Fragments of driftwood meeting in the wide ocean continue together a little space; thus parents, wives, children, friends, and riches remain with us a short time, then separate, and the separation is inevitable. No mortal can escape the common lot; he who mourns for departed relatives has no power to cause them to return. One standing on the road would readily say to a number of persons passing by, I will follow you; why, then, should a person grieve, when journeying the same road which has been assuredly travelled by all our forefathers? Life resembles a cataract rushing down with irresistible impetuosity. Knowing that the end of life is death, every right-minded man ought to pursue that which is connected with happiness and ultimate bliss.—*Dublin University Mag.*

The Mormons in North America.—Theodore Olshausen, of St. Louis, Mo., has published in German a history of the Mormons, or Latter Day Saints, in North America; from which it appears that America contains 68,700 of that sect, of whom 38,000 are in Utah; 5000 in New York; 4000 in California; 5000 in Nova Scotia and Canada, and 9000 in South America and the Islands. Europe contains 39,000, of whom 32,900 are in Great Britain and Ireland; 5000 in Scandinavia; 1000 in Germany and Switzerland; 500 in France, and 500 in the rest of Europe. In Asia there are said to be 1000; In Australia and Polynesia 2400; in Africa 100; on travel 1800; there are, besides, 8,500 Schismatics, including Strangites, Rigdonites and Wightites. The numbers amount in the aggregate to 116,500, and it is supposed that the whole sect cannot exceed 126,000.

THE FRIEND.

EIGHTH MONTH 23, 1856.

SUMMARY OF EVENTS.

EUROPE.—News from Liverpool to Eighth mo. 6th. The opposition to the O'Donnell ministry had been put down throughout Spain. On the 1st instant, the Royal troops entered Saragossa without resistance, and disarmed the citizens. The policy of the new ministry is not yet known, but private letters from Madrid represent that O'Donnell is firm on two important points; that Queen Christina shall not return to Spain, and that the sale of church property shall be proceeded with, and consequently that there is increased probability of a reconciliation between the new government and the liberal party. The Paris Moniteur publishes the following: "Tranquillity having been restored in Spain, the Emperor has given orders for the suspension of all movements of troops towards the frontiers." The affairs of Italy continue the subject of discussion between France and Austria. The French government has communicated to the Cabinet of Vienna the last note addressed to the Western Powers by the Court of Naples, and has declared that the government of France was in the highest degree dissatisfied with the principles expressed in that document; and moreover that it was determined, with the co-operation of England, to constrain the Neapolitan government to give way to the legitimate demands of the Western Powers. The reply says, Austria could not remain indifferent to the communication of the French Cabinet, and she continues to represent to the Cabinet of Naples the necessity of giving way to the demands of France and England, adding that, in the event of resistance, it must not count on the moral or physical support of Austria. The vines, to a considerable distance around Paris, were in a satisfactory condition, but less so in the south of France. The silk crop of France has turned out so deficient, that large contracts have been made for foreign raw silk. Immense quantities of grain had arrived at Marseilles, from the Sea of Azof, the Adriatic and the Danube, and the price of cereals had largely declined. All apprehensions of a scarcity had vanished.

Denmark proposes to fortify the Sound, and, it is said, Russia advises it. The trade of the Baltic ports is active. There is a difficulty with regard to the new boundary between Russia and Turkey. The English, Austrian and French Commissioners are of opinion, that Belgrade should belong to Turkey, but Russia protests against this decision. The Porte opposes the union of Moldvavia and Wallachia under one government, and Russia objects to the amount of annual tribute demanded from the Principalities by Turkey. A terrible disaster had occurred at Salonica. By fire, and an explosion of gunpowder clandestinely secreted in the house of a French merchant, about seven hundred persons were killed or wounded, and property estimated at one hundred million piastres destroyed. The insurrection in Arabia had been subdued, and the chief of the insurgents captured and sent to Constantinople.

Liverpool Markets.—Cotton was firm, with an upward tendency. The advices respecting the grain crops, continuing favourable, breadstuffs had further declined; wheat was 6*d.* to 9*d.* lower, and flour, 2*s.* a 3*s.* a barrel. Corn was unchanged, but the sales small. Consols at London, 95¼ a 95⅜.

NICARAGUA.—The latest advices represent Walker as carrying forward the government with energy, in the face of great opposition and difficulty. His army of 1200 men was being rapidly diminished by sickness. Rivas had fortified himself at Leon, and had the support of the more influential portion of the inhabitants. It was expected Walker would soon march against him. An invasion from Guatemala, for the purpose of driving out the Americans, was reported to be at hand—also a renewal of hostilities on the part of Costa Rica. Walker's position is considered critical.

HAVANA.—The last vessels from Cuba report the yellow fever as prevailing at Havana, and in other parts of the Island. As there is no regular register of the deaths that occur, the progress or extent of the disease is not accurately known.

EGYPT.—The crops of this year have been abundant throughout Egypt, and the produce was being brought down the Nile to Alexandria, for shipment in large quantities. The electric telegraph is in the desert, between Cairo and Suez, has been completed.

CHINA.—Further successes of the insurgents are reported. In Kiansi, the Imperial troops had been defeated by the rebels, with a loss of 8000 men; among them seven Mandarins. In the north, also, the insurgents were making progress.

UNITED STATES.—*Congress.*—Previous to adjourning on the 18th inst., a bill was passed by both houses fixing the compensation of the members at $3000 annually. There is to be no more appropriation of books for members, and a deduction is to be made for absence, unless occasioned by sickness of themselves or families. In Executive session, the Senate ratified treaties with Austria and Baden for the extradition of criminals, and also commercial treaties with the Two Sicilies and Nicaragua. The Senate, by a vote of 35 to 12, rejected the House bill for the re-organization of Kansas. The Senate bill to protect citizens of the United States in the discovery of Guano islands, was passed by the House. Much business was crowded into the last few days of the session, the limits of which our limited space does not permit a notice. The House receded from most of its amendments to the appropriation bills designed for the protection of Kansas. The items of the Navy appropriation bill amount to $11,318,800. All the general appropriation bills have been passed, excepting that for the army, which appropriates about $14,000,000. The failure of this bill was caused by the provision inserted in it by the House, forbidding the employment of the army for the execution of the laws of the so-called Legislature of Kansas, to which the Senate refused to agree. Many private bills passed by both houses, failed to secure the signature of the President for want of time.

California.—San Francisco dates to Seventh mo. 21st, have been received. By the steamer which sailed on that day, $1,951,527 in gold was shipped to Panama, of which $1,471,360 was for New York, and $448,666 for England. The grain crops are said to be very good in all parts of the State, and fruits and vegetables abundant, and falling in price. Gold mining continued to pay well, and is now regarded as a permanent branch of the industry of the country. Men, who have not capital to work on their own account, get from $3 to $4 a day, from the companies. In the cities, mechanics get $5 a day, and labourers $3, with work, on the average, only about half the time. Board for these classes costs from $5 to $7 a week. The Vigilance Committee was still in power, and continued to make arrests of obnoxious sons. Judge Terry's trial had not been concluded was supposed his sentence would be banishment. lander Brace had been found guilty of a murder mitted two years since, and would, it was under be hung by the Committee. Upwards of thirty duals were under arrest on various charges, n whom would be expelled. The proceedings of the mittee appear to be approved by the community rally. Terrible conflagrations had occurred at G town, Nevada, and Placerville, by which the great tions of these towns were laid in ashes. The property is estimated at several millions of dollars

Oregon.—New discoveries of gold have been m Southern Oregon; but the mining in this territory has been unimportant. There was a prospect bountiful harvest. In the Port Orford district, t dian war was at an end. At Port Orford, there 742 Indian prisoners. In other parts of the ter military operations on a small scale continued.

The Ohio River.—On the 15th inst., there were teen inches water in the channel at Pittsburg, metal mark, and stationary—all steam navigation ped.

The Red River.—On the 3d inst., the mouth o river was closed by a bar forming across it, and th rent of the stream turned into the Atchafalaya. bar resisted all efforts of the steamboats to cut th it.

Grain at the West.—The receipts of grain at Ch Ill., are stated to be very large. Throughout the generally, the wheat crop is reported unusually go

Emigration.—The whole number of emigrants, crossed the Mississippi at Dubuque, Iowa, be Fourth mo. 16th and Seventh mo. 5th last, w families, consisting of 4504 members, having in possession 1031 wagons, 1728 horses, 7722 catt 11,700 sheep.

The Wheat Crop of 1856, is estimated by the C nati Price Current, to amount in the whole Un 142,836,000 bushels. This estimate is supposed t derrate rather than exaggerate the yield. The e Pennsylvania is rated at 18,250,000 bushels; Ohi 800,000; New York, 16,200,000; Illinois, 14,600 Virginia, 12,500,000; Indiana, 11,250,000.

Philadelphia.—Mortality last week, 354.

New York.—Mortality last week, 651. Adults, children, 523; none from yellow fever.

Storm at the South.—During the early part of last a violent storm occurred over a considerable ext country, including the range from Mobile to New Or Rain fell with little intermission for 110 hours, occ ing destructive inundations, and much loss of pro At Baton Rouge, fourteen inches of rain fell duri hours. At Last and Grand Caillon Islands, near Orleans, the buildings were swept away, and many sons drowned. One hundred and eighty-two dead b had been found, and it was supposed about 250 pe had perished. The damage to the corn, cotton sugar crops was very heavy. The flood at Bayou caused a crevasse of the levee at that place, floodi country to a great extent. It was reported that thousand dwellings had been swept away or dama

RECEIPTS.

Received from Joel Gilbert and Thos. Bundy, (each, vol. 29; from Jas. H. Dean, O., $1, to 52, vc and for Jos. Reeder, $2, vol. 29.

HAVERFORD COLLEGE.

The winter term will commence on Fourth-day, Tenth month. Terms, $250 per annum, including tion, Board and Washing. Applications for admi should be made early.

Address, Jonathan Richards, Superintendent, Haverford, P. O., Pa.; Thomas Kimber, 50 North Fo street, Philadelphia; or Robert Pearsall Smith, 17 street, Philadelphia.

"Knowledge is Power."

(Continued from page 394.)

One of the most striking effects of the want of knowledge producing disunions among mankind that is injurious to the interests of each and all, is the evil which still exists among many well-meaning and reflecting persons, that the powers and arrangements which capital has created and devised for the advancement of production are injurious to the great body of working-men in their character of producers. The great forces by which capital and labour now work—forces which are gathering strength every day—are accumulation of skill and division of employments. It will be for us to show how the applications of science to the manufacturing arts have the effect of insuring cheap production and increased employment. These applications of science are principally displayed in the use of MACHINERY; and we shall endeavour to prove that, although individual labour may be partially displaced or unsettled for a time, by the use of this greater and better power than unassisted manual labour, all are great gainers by the general use of this power. Through that power, all principally possess, however poor they may be, many of the comforts which make the difference between man in a civilized and man in a savage state; and further that in consequence of machinery having rendered productions of all sorts cheaper, and thereby caused them to be more universally purchased, it has really increased the demand for that manual labour, which it appears to some, reasoning only from a few instances, it has a tendency to diminish. In the year 1827, a Committee of the English House of Commons was appointed to examine into the subject of emigration. The first person examined before that Committee was Joseph Foster, a working weaver of Glasgow. He told the Committee that he and many others, who had formed themselves into a society, were in great distress; that numbers of them worked at the *hand-loom* for eighteen to nineteen hours a day, and that their earnings, at the utmost, did not amount to more than seven shillings a week, and that sometimes they were as low as four shillings. That only years before that time they could readily earn a pound a week by the same industry; and that as *power-loom* weaving had increased, the business of the hand-weavers also had increased in the same proportion. The Committee then put to Joseph Foster the following questions, and received the following answers:

"Are the Committee to understand that you attribute the insufficiency of your remuneration for your labour to the introduction of machinery?"

A. "Yes."

Q. "Do you consider, therefore, that the introduction of machinery is objectionable?"

A. "We do not. The weavers in general, of Glasgow and its vicinity, do not consider that machinery can or ought to be stopped, or put down. They know perfectly well that machinery must go on, that it will go on, and that it is impossible to stop it. They are aware that every implement of agriculture or manufacture is a portion of machinery, and, indeed, everything that goes beyond the teeth and nails (if I may use the expression) is a machine. I am authorized by a majority of our society, to say that I speak their minds, as well as my own, in stating this."

It is worthy of note how the common sense of this working-man, a quarter of a century ago, saw clearly the great principle which overthrows, in the outset, all unreasoning hostility to machinery. Let us follow out his principle.

Among the many accounts which the newspapers of England, in 1830, gave of the destruction of machinery by agricultural labourers, it was stated that in one district a band of mistaken and unfortunate men destroyed all the machinery of many farms, *down even to the common drills.* The men conducted themselves, says the newspaper, with civility; and such was their consideration, that they moved the machines out of the farm-yards, to prevent injury arising to the cattle from the nails and splinters that flew about while the machinery was being destroyed. *They could not make up their minds* as to the propriety of destroying a horse-churn, and therefore that machine was passed over.

A quarter of a century has made a remarkable difference in the feelings of labourers, not only in England, but in all other countries, even among the least informed with regard to machinery. The majority of the people now know, as the weavers of Glasgow knew in 1827, that "machinery must go on, that it will go on, and that it is impossible to stop it." It is unnecessary at the present day to adduce any argument to prove or sustain this position. Common sense teaches it, and in the United States especially, where the fact is almost universally acknowledged and acted upon, the great majority of labourers rejoice in every new mechanical application and improvement, as an additional instrument for the elevation of labour, and the increase of wealth. It is sufficient briefly to show, that if the English labourers had been successful in their career, had broken all those ingenious implements which have aided in rendering British agriculture the most perfect in the world, they would not have advanced a single step in obtaining more employment, or being better paid.

We will suppose, then, that the farmer has yielded to this violence; that the violence has had the effect which it was meant to have upon him; and that he takes on all the hands which were out of employ to thrash and winnow, to cut chaff, to plant with the hand instead of with a drill, to do all the work in fact, by the dearest mode instead of the cheapest. But he employs *just as many people as are absolutely necessary*, and no more, for getting his corn ready for market, and for preparing, in a slovenly way, for the seed-time. In a month or two the victorious destroyers find that not a single hand the more of them is really employed. And why not? There are no drainings going forward, the fences and ditches are neglected, the dung heap is not turned over, the marl is not fetched from the pit; in fact, all those labours are neglected which belong to a state of agricultural industry which is brought to perfection. *The farmer has no funds to employ in such labours;* he is paying a great deal more than he paid before for the same, or a less amount of work, because his labourers choose to do certain labours with rude tools instead of perfect ones.

We will imagine that this state of things continues till the next spring. All this while the price of grain has been rising. Many farmers have ceased to employ capital at all upon the land. The neat inventions, which enabled them to make a living out of their business, being destroyed, they have abandoned the business altogether. A day's work will now no longer purchase as much bread as before. The horse, it might be probably found out, was as great an enemy as the drill-plow; for, as a horse will do the field-work of six men, there must be six men employed, without doubt, instead of one horse. But how would the fact turn out? If the farmer still went on, in spite of all these losses and crosses, he might employ men in the place of horses, but not a single man more than the number that would work at the price of the keep of one horse. To do the work of each horse turned adrift, he would require six men; but he would only have about a shilling a day to divide between these six—the amount which the horse consumed.

As the year advanced, and the harvest approached, it would be discovered that not one-tenth of the land was sown; for although the plows were gone, because the horses were turned off, and there was plenty of *labour* for those who chose to labour for its own sake, or at the price of horse-labour, this amazing employment for human hands, somehow or other, would not quite answer the purpose. It has been calculated that the power of horses, oxen, etc., employed in husbandry in Great Britain is ten times the amount of human power. If the human power insisted upon doing all the work with the worst tools, the certainty is that not even one-tenth of the land could be cultivated. Where, then, would all this madness end? In the starvation of the labourers themselves, even if they were allowed to eat up all they had produced by such imperfect means. They would be just in the condition of any other barbarous people, that were ignorant of the inventions that constitute the power of civilization. They would eat up the little corn which they raised themselves, and have nothing to give in exchange for clothes, and coals, and candles, and soap, and tea, and sugar, and all the many comforts which those who are even the worst off are not wholly deprived of.

All this may appear as extreme statement; and certainly we believe that no such evils could have happened; for if the laws had been passive, the most ignorant of the labourers themselves would, if they had proceeded to carry their own principle

much further than they had done, see in their very excesses the real character of the folly and wickedness to which it had led, and would lead them. Why should the labourers of England not have destroyed the harrows as well as the drills? Why leave a machine which separates the clods of the earth, and break one which puts seed into it? Why deliberate about a horse-churn, when they were resolved against a winnowing machine? The truth is, these poor men perceived, even in the midst of their excesses, the gross deception of the reasons which induced them to commit them. Their motive was a natural, and, if lawfully expressed, a proper impatience, under a condition which had certainly many hardships, and those hardships in great part produced by the want of profitable labour. But in imputing those hardships to machinery, they were at once embarrassed when they came to draw distinctions between one sort of machine and another. This embarrassment decidedly shows that there were fearful mistakes at the bottom of their furious hostility to machinery.

(To be concluded.)

The priest of Drayton, the town of my birth, came often to me, and I went often to him, and another priest sometimes came with him, and I would ask them questions, and reason with them. This priest Stevens, asked me, "why Christ cried out upon the cross, 'my God, my God, why hast thou forsaken me?' and why he said, 'if it be possible, let this cup pass from me; yet not my will but thine be done?'" I told him at that time the sins of all mankind were upon him, and their iniquities and transgressions, with which he was wounded, which he was to bear, and be an offering for, as he was man, but died not as he was God; so, in that he died for all men, tasting death for every man, he was an offering for the sins of the whole world. This I spoke, being at that time in a measure sensible of Christ's sufferings. The priest said, "It was a very good, full answer, and such a one as he had not heard."

I heard of one called Dr. Cradock, of Coventry, and went to him and asked him the ground of temptations and despair, and how troubles came to be wrought in man. He asked me, "who was Christ's father and mother?" I told him, "Mary was his mother, and that he was supposed to be the son of Joseph, but he was the son of God."—*George Fox.*

It is our belief that the Word was made flesh, and dwelt among men, and was, and is, the only begotten of the Father, full of grace and truth; his beloved Son, in whom he is well pleased, and whom we are to hear in all things, who tasted death for every man, and died for sin that we might die to sin, and by his power and spirit be raised up to newness of life here, and to glory hereafter. That we are only justified from the guilt of sin, by Christ the propitiation, and not by works of righteousness which we have done; so there is an absolute necessity that we receive and obey, to unfeigned repentance and amendment of life, the holy light and spirit of Christ Jesus, in order to obtain that remission and justification from sin; since no man can be justified by Christ, who walks not after the Spirit, but after the flesh; for whom he sanctifies, them he also justifies. And if we walk in the light as he is in the light, his precious blood cleanseth us from all sin, as well from the pollution as from the guilt of sin.—*William Penn.*

Though a man without money is poor, a man with nothing but money is still poorer.

For "The Friend."

Guano.

(Continued from page 397.)

It would need more space than can here be afforded, to give a detail of the special results obtained by the application of guano as a manure. And in proof of its universal applicability *to all kinds of crops, and all kinds of soil*, it may suffice to mention, that according to this experience, one cwt. of guano is capable of producing in the *first* year 540 lbs. of rye, from 600 to 800 lbs. of barley, or from 320 to 330 lbs. of potatoes, &c. If the subsequent operation is added to the calculation, it may be affirmed with certainty, that one cwt. of guano is able to produce 5 Saxon bushels (at least 800 lbs.) of rye, with the corresponding quantity of straw (at least 1800 lbs.) of which some 60 per cent. must be reckoned for the first year, 25 per cent. for the second, and 15 per cent. for the third.

In comparing the fertilizing power of guano with that of the dung of cattle, it may be assumed as the mean of the results of practical experience in Saxony, that one cwt. of guano is equivalent to from 56 to 70 cwt. of the latter, that is to three full loads. Of bone-dust 2 to 2½ cwt. furnished the same result. Guano, however, excels the latter, (which is not equally well adapted to all soils,) because it has a decided advantage in the first year, whilst bone-dust, on the other hand, has a more enduring operation. Hence, it may be readily perceived, *that it must be very judicious to add some guano to bone-dust*, in order that it may call forth even in the first year the most abundant produce.

For a thorough manuring, the average reckoning is 4 cwt. of guano to the Saxon acre, or a full 2 cwt. to the Prussian Morgen, (about 2½ of an English acre): a less quantity may suffice where climate and soil are peculiarly favorable.

Of the mode of application:—First, the guano should be reduced to a homogeneous pulverulent mass, and mixed with earth. The first is effected upon a barn floor, by sifting and thrashing. The finer portion is first sifted off; then the remaining lumps are thrashed and again sifted, until they are likewise pulverized. The last portions of the residue are often so yielding and viscid, that they flatten upon being struck, and will not pass through the sieve. In this case they may be either pounded up with some broken brick, by which means they may be reduced to powder, or they may be added to the compost heap, which no good farmer is without. The sifted guano should now be added to two or three times its quantity of earth, or with a mixture of earth and ashes, and the whole shovelled together until a thorough mixture is effected. The earth must be in the ordinary state of moisture, in which it easily absorbs the guano without forming into balls or lumps. The spreading on the field may be done in the same manner as for lime, by scattering from seed bags, (but best by *drilling*.) It is well to strow it on the seed furrow, two or three days before introducing the seed, and then lightly harrow; on a light soil to roll, and after this to harrow in the seed. Moist weather during its application to the soil, especially in spring or summer sowing, exerts a very beneficial influence upon the action of guano.

Pure and good guano is so rich in ammoniacal salts as easily to corrode the tender roots of plants, particularly in dry weather; by mixing it with earth, it is so enveloped and diluted, that this injurious effect is no longer to be feared. The volatile elements of the guano become fixed in the porous earth which has the property of absorbing and retaining them. Finally, by the addition of earth a more uniform distribution of the mass upon the land is rendered practicable, and the flying dust during dispersion prevented.

With potatoes, green crops, roots &c., a of the mingled earth may be given to eve in dibbling or planting. A little more quarter of an ounce of guano serves in this a complete manuring for a plant. With ot nure ⅛ or ¼ part of this quantity causes a increase of growth.

Equally certain results are obtained if th earth is uniformly scattered in the fur which potato sets are laid, or it may be over the surface of the field after the youn have sprouted up, but may still be passed o the harrow; a mode of treatment that is con of great advantage when the potatoes have the height of some four inches, and must earthed up. *Garden produce* may be tre either of these methods; for such plants, h as also for *grass* or *meadow land*, waterin guano stirred up in water may be strongly mended. For this purpose one part of guanc be treated with at least 80 to 100 parts of since if too strong, the liquid exerts a corro tion upon young and tender plants.

For top-dressing in the autumn or early guano mixed with earth is in like manner t beneficial.

3. TESTING GUANO.

If the farmer is not afraid of a little ti trouble, he can easily test the quality of guan self.

The previous analyses show, that a gua be *perfectly genuine and yet miserably bad* great then the danger of deception, when *tional adulterations* are superadded!

Tests are now possessed of such simplicit require scarcely more dexterity and attentic roasting or boiling coffee, and yet sufficient rate to serve as reliable guides in doubtful c

1. *Test by drying and subsequently washi water.*—If the guano, as is generally the ca those kinds that are brought from Peru and C uniform powder, weigh out two ounces, sp upon paper, and let it lie two days in a mod warm place, in summer in a dry and airy si in winter in a warm room, in order that the dry it; what it may then have lost in weigh be esteemed superfluous water. Many s guano are so moist as to lose by this gentle from three to four drachms (20 to 24 per c their weight.

If the guano, like the Patagonian and Afr not of uniform character, then, in order to o mixture as equable as possible, the lumps have frequently an altogether different com from that of the powdery portions, must be ized, before weighing of and drying a given tity.

2. *Test by Combustion.*—Pour half an o the guano to be examined into an iron spoo place it upon red hot coals until a white or ash is left, which must be weighed after *The less ash is left behind, the better is the* The best sorts of Peruvian guano yield, fro an ounce, somewhat more than one drachm o (30 to 33 per cent); whereas the inferior that are now so often offered for sale (for ex Patagonian, African, Saldanha Bay, and guanos,) leave a residue of from 2½ to 3 dr (60 to 80 per cent.) and those intentionall terated, a still greater quantity of ashes. O ine guano, the bad as well as the good, the always *white* or *gray;* a yellow or reddish indicates an adulteration with loam, sand, &c.

The test is very simple, and at the same time rustworthy; it rests upon the fact, that the nous combinations existing in guano, and its most valuable ingredients, undergo com- and volatilization when subjected to heat. eto, the difference of odor during the com- is characteristic. The vapors from the especimens have a pungent smell, like spirits s horn, with a peculiar piquancy, almost like old cheese; whilst those rising from inferior es smell like singed horn-shavings, or hair.

Lime Test.—Put a tea-spoonful of each f guano to be examined into a wine-glass, on this a tea-spoonful of slaked lime; then few tea-spoonsful of water and agitate the briskly. Lime liberates the ammonia from monoiacal salts contained in the guano, and pes; *the more excellent, therefore, a guano is, onger will be the pungent ammoniacal odor escapes from this guano paste.* This test so accurate as the preceding, but in many t is very convenient on account of its sim- particularly where it is desirable to pass a l and approximative opinion upon the quality rent kinds of guano.

The slaked lime should be preserved for future must be carefully excluded from the air in a d well corked bottle.

Test with hot water.—Make a filter of blot- soft porous paper, folded together into the of a cone,* and put this into a tin funnel or riangle. Let half an ounce of the air-dried be placed in this, and over it pour boiling e as long as it passes through of a yellowish . If the paper with the moist guano is laid, no more liquid drops from it, in a warm place, e residue weighed when it has become com- dry, the deficiency from half an ounce will the weight of those elements which have been ved by the water. As a general rule it may d, *the larger the quantity of guano that is ed in water, the more ammoniacal salts does it n, and the better it is.* Hence, that guano be preferred, as in the test by combustion, , upon being so heated with water, leaves be- the smallest residue. In the best or Peruvian s, the residue that is insoluble from half an , amounts to about two drachms (from 50 to r cent;) on the other hand, in the compara- worthless guanos from three to three and a drachms (80 to 90 per cent.)

ceptions to this rule may, however, occur, when no contains many soluble mineral salts. Speci- occasionally occur in commerce which consists e half or two-thirds of sea-salt and Glauber such guanos upon being heated with hot r, would only leave a residue of from one to two ams of insoluble substances, yet must, never- ss, be regarded as bad merchandise. In such a the test by combustion is the most reliable; would be found by this test that a guano of ind in question yielded three drachms and of ashes, and must accordingly be admitted inferior variety.

Vinegar test.—Pour strong vinegar, or, bet- dill, some muriatic acid, over the guano to be lined; if a strong effervescence ensues, an in- onal adulteration of the guano with *lime* may ferred. This substance may also be recognized he combustion test, since lime remains behind mbustion and increases the quanitity of ashes.

s the apothecaries are accustomed to use it.

Worship in this gospel day is inward and spirit- for God is a spirit, as Christ teacheth, and he will be worshipped in spirit and in truth, being most suitable to his divine nature. Wherefore we wait in our assemblies to feel God's spirit to open and move upon our hearts, before we dare offer sacrifice to the Lord, or preach to others the way of his kingdom, that we may preach in power as well as words; and as God promised, and Christ ordained, without money and without price. This also leads us to deny all the vain customs and fashions of the world, and to avoid excess in all things, that our moderation may be seen of all men, because the Lord is at hand to see and judge us according to our deeds.—*William Penn.*

Epistle of George Fox.

Moreover it came upon me about this time from the Lord, to write a short paper and send forth, as an exhortation and warning to the Pope, and all kings and rulers in Europe; as follows:—

Friends,—Ye, heads and rulers, kings and nobles of all sorts, be not bitter, nor hasty in persecuting the lambs of Christ, neither turn yourselves against the visitation of God, and his tender love and mercies from on high, who sent to visit you, lest the Lord's hand, arm and power, take hold swiftly upon you, which is now stretched over the world. It is turned against kings, and shall turn wise men backward, and will bring their crowns to the dust, and lay them low and level with the earth. The Lord will be king, who gives crowns to whomsoever obey his will. This is the age wherein the Lord God of heaven and earth is staining the pride of man, and defacing his glory. You that profess Christ, and do not love your enemies, but on the contrary shut up and imprison those who are his friends; these are marks that you are out of his life, and do not love Christ, who do not the things he commands. The day of the Lord's wrath is kindling, and his fire is going forth to burn up the wicked, which will leave neither root nor branch. They that have lost their habitation with God, are out of the Spirit that gave forth the Scriptures, and from the light that Jesus Christ hath enlightened them withal; and so from the true foundation. Therefore be swift to hear, slow to speak, and slower to persecute: for the Lord is bringing his people to himself, from all the world's ways, to Christ the way, and from all the world's churches, to the church which is in God, the Father of our Lord Jesus Christ; and from all the world's teachers, to teach his people himself by his Spirit; from all the world's images, into the image of himself; and from their likenesses, into his own likeness; and from all the world's crosses of stone or wood, into his power, which is the cross of Christ. For all these images, crosses, and likenesses, are among them, that are apostatized from the image of God, the power of God, the cross of Christ, which now fathoms the world, and is throwing down that which is contrary to it, which power of God never chapges.

Let this go to the kings of France, and of Spain, and to the Pope, for them to prove all things, and to hold that which is good. And first to prove, that they have not quenched the Spirit; for the mighty day of the Lord is come and coming upon all wickedness, and ungodliness, and unrighteousness of men, who will plead with all flesh by fire and by sword. And the truth, the crown of glory, and the sceptre of righteousness over all shall be exalted; which shall answer that of God in every one, upon the earth, though they be from it. Christ is come a light into the world, and doth enlighten every one that cometh into the world, that all through him might believe. He that feeleth the light that Christ hath enlightened him withal, he feeleth Christ in his mind, and the cross of Christ, which is the power of God; he shall not need to have a cross of wood or stone, to put him in mind of Christ, or of his cross, which is the power of God manifest in the inward parts. 1654. G. F.

From "Bell on the Hand."

(Continued from page 393.)

Life draws the materials of the body apart from the influence of those affinities which hold the inorganic world together, and substitutes other laws. The wonders of the microscope are not greater than should be excited by looking to the early rudiments of some animal, it may be the largest that inhabits the earth. In a small portion of matter that seems homogeneous, transparent, soft, and like a jelly, there is only a pulsating point visible. What might be seen by employing the newly discovered properties of light, it is impossible to say; as polarized light exhibits in mineral bodies a structure not visible before, so we could imagine that some power bestowed upon our eye might discover a distinction of parts in what seems a drop of jelly. But the greater wonder is in proof before us, that this mass has a principle of life—that it is not only ordered what this influence will perform, in attracting matter, and building up the complex structure of an animal body, but that the period of existence of that body is from its beginning defined. This life may be limited to a day, and truly ephemeral, or be protracted to a hundred years: and the period is adjusted, as perfectly as the mechanism and structure itself, to the condition of existence, the enjoyment of the individual, and the continuance of the species.

Nothing is more remarkable than the slight hold by which this life is possessed by some of these organic structures, and the tenacity of life in others. Slight changes of temperature or moisture will annihilate some, whilst others will be dried up into dust, or ribbed in ice, and after years admit of resuscitation.

If instead of contemplating the variety of animals as they are adapted to their place, we think of ourselves—there is no living creature in which it is so distinctly designed that the stages of life shall be marked—so that we may have continually before us the tenure by which we hold that life. But to our argument;—during all the progressive changes of life, the material is ever new; the poet's picture of the last stage of man's life is not a true one. If man totters under the burthen of years, the simile of a ruin is inapplicable; the material of his frame is not different, and not older than that of a child—it is ever decaying, ever renewing whilst the office of digestion and assimilation goes on at all. The difference of activity in this change of the material of the body, compared with that of the child, may be as a week to a day; but here is not the cause of the gray hair, faded cheek, and feeble step. This is the stamp which the Creator has intended to be deciphered and interpreted.

Who, contemplating the many beautiful fabrics built up within an animal body, and seeing the proofs that they are not permanent, but on the contrary, ever changing and ever forming anew—moreover, learning that these textures are formed by an energy, or life, which continues uniform in its operation, whilst all the materials that it works upon are changing—can hesitate to believe that in the changes of the inorganic matter around us there is a presiding Power. The difficulty of comprehension here must be attributed to the partial view which we have of these changes, from their extending into periods so far beyond our measure of time: but we cannot, at least, doubt that such a power may be in operation, and we must acknowledge that a balance is preserved, and that order and harmony prevail.

We find every organ of sense, with the excep-

tion of that of touch, more perfect in brutes than in man. In the eagle and the hawk, in the gazelle and in the feline tribe, the perfection of the eye is admirable;—in the dog, wolf, hyæna, as well as in birds of prey, the sense of smelling is incouceivably acute; and if we should have some hesitation in assigning a more exquisite sense of taste to brutes, we cannot doubt the superiority of that of hearing in the inferior animals. But in the sense of touch, seated in the hand, man claims the superiority; and it is of consequence to our conclusion that we should observe why it is so.

It has been said that, accompanying the exercise of touch, there is a desire of obtaining knowledge; in other words, a determination of the will towards the organ of the sense. Bichat says, it is active whilst the other senses are passive. This opinion implies that there is something to be understood—something deeper than what is here expressed. We shall arrive at the truth by considering that in the use of the hand there is a double sense exercised; we must not only feel the contact of the object, but we must be sensible to the muscular effort which is made to reach it, or to grasp it in the fingers. It is in the exercise of this latter power that there is really an effort made; there is no more direction of the will towards the nerve of touch, than towards any other sensible nerve. But, before entering on the consideration of the sensibility and action which belong to the fingers, we must attend to the common sensibility of the surface.

Besides that the common sensibility belongs to the hand, and that some inquiry into it is necessary to the completion of our subject, I pursue it the more willingly, because there is no other which affords more surprising proofs of design and of benevolence in the Author of our being. However obvious the proofs may be which are drawn from the mechanism of the body, they are not to be compared, in that respect, to those which are derived from the living endowments of the frame.

I have used the term common sensibility in conformity with the language of authors and with customary parlance; but the expressions, the "common nerves," and the "common sensibility," in a philosophical inquiry, are inadmissible. Indeed, these terms have been the cause of much of the obscurity which has hung over the subject of the nervous system, and of our blindness to the benevolent adaptation of the endowments of that system to the condition of animal existence. Thus, it has been supposed that some nerves are more coarsely provided for sensation, and that others are of a finer quality, adapted to more delicate impressions. It is assumed that the nerve of the eye is finer than the nerve of the finger—without considering that the retina is insensible to that quality of matter of which we readily acquire the knowledge through touch. Nerves are, indeed, appropriated to peculiar senses, and to the bestowing of distinct functions, but delicacy of texture has nothing to do with this. The nerve of touch in the skin is insensible to light or to sound, not because it has a coarser or more common texture: the beauty and perfection of the system is, that each nerve is made susceptible to its peculiar impression only. The nerve of the skin is alone capable of giving the sense of contact, as the nerve of vision is confined to its own office. If this appropriation resulted merely from a more delicate texture: if the retina were sensible to the matter of light only from possessing a finer sensibility than the nerve of touch, it would be a source of torment; whereas it is most beneficently provided that it shall not be sensible to pain, nor be capable of conveying any impressions to the mind, but those which operate according to its proper function, producing light and colour.

The pain which we experience in the eye, and the irritation from dust, are owing to a distinct nerve from that of vision, and are consequent on the susceptibility of the surface to a different kind of impression; of which more presently. We should keep in mind the interesting fact, that when surgeons perform the operation of couching, the point of the needle, in passing through the outer coat of the eye, gives a sensation of pricking, which is an exercise of the nerve of touch; but when the point passes through the retina, which is the expanded nerve of vision, and forms the internal coat of the eye, the sensation that is produced is as of a spark of fire. The nerve of vision is as insensible to touch as the nerve of touch is to light.

(To be continued.)

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 396.)

SARAH M'VAUGH.

Sarah M'Vaugh, wife of James M'Vaugh, a minister of the gospel, whose residence was at Middletown, Bucks county, Pennsylvania, deceased Second mo. 9th, 1738.

HANNAH JONES.

Of this Friend we have nothing to add to a short testimony issued concerning her by Haverford Monthly Meeting, viz.: "Our friend, Hannah Jones, received a gift of the ministry, which was sound and edifying. She was much concerned for the promotion of Truth, and lived in love and unity with her friends. She died in the Fourth month, 1738, and was buried at Friends' burying-ground, in the valley."

BENJAMIN HUMPHREY.

Of Benjamin Humphrey, of Merion, Pennsylvania, Samuel Smith, after saying that he deceased on the 4th of Ninth month, 1738, and that he was one of the first settlers, adds: "He came over in 1683, was remarked for his hospitality, strictly adhering to the principles of Truth as professed by his brethren called Quakers, and was a useful member among them."

GEORGE ROBINSON.

George Robinson was born in the north of Ireland, in the year 1666 or 1667. About the time he became of age, in the year 1687, he removed to the Province granted to William Penn, and settled at Newark, in Newcastle county, on the Delaware. He had been educated in the way of the Church of England, but soon attached himself to Friends, attending their meetings for worship, which, for that neighbourhood, in those early days were held at the dwellings of Valentine Hollingsworth, Morgan Drewitt, and Cornelius Empson, in course. Becoming acquainted with Catharine Hollingsworth, the daughter of Valentine, a mutual attachment sprung up between them, and at Newark Monthly Meeting, held in the First month, 1688, they laid their proposals of marriage before Friends. George had been an attender of their meetings; and where such was the case, if the walk of the parties was orderly, and consistent with the testimonies of Truth, no obstruction was usually thrown in the way of the marriage being accomplished. Nevertheless, some Friends, not feeling fully satisfied that George was thoroughly convinced, and perhaps not knowing how much affection for Catharine might have operated to draw him to meetings, expressed the strait which was in their minds. On hearing it, the young couple consented to wait until all tion on that score was removed, and the marri not consummated until the ensuing Eleventh "which," says a memorial issued concerni "demonstrated their sincerity to the Truth, gard to the unity and good order esta amongst Friends, and is thought worthy to membered as an example for youth to follo

They were, the memorial states, "true fellows together in best things, being much to hospitality, and charitable to the poor, es to those of the household of faith, and ki open-hearted to their friends. They were to keep up that little meeting of Newark, they continued. They lived together to a g age, retaining their love to Truth and Friend last."

In the year 1718, George was appointed der, and was serviceable in the church, and a his fellow-citizens many ways. He deceased mo. 8th, 1738, in the 72d year of his age beloved Catharine survived until the 24th of month, 1746, being in her 83d year. She w many years, one of the most useful mem the Women's Monthly Meeting of Newark wards called Kennett, and on her devolved portion of the most important services church.

JOHN HUMPHREY.

John Humphrey was born in Wales, in and came to Pennsylvania, in 1698. He useful citizen, and a valuable member of r society, and was one of the first settlers of Gwy in Philadelphia county. He continued in uni his brethren, and serviceable in the church anointed elder, until the close of his life, whic place, Ninth mo. 14th, 1738. He being 70 y age.

HANNAH SOMERS.

Hannah Somers was born in the city of W ter, Old England, about the year 1667, an to Pennsylvania, among the first settlers William Penn. She was soon after marr John Somers, a valuable Friend, from her city. Their residence was in the northern Philadelphia county, until a short time af year 1700, when they removed to Great Eg bour, West Jersey. She was a faithful wo her day, and being called to the work of the try, she exercised her gift, although not in words, yet to the comfort and edification church. She was, in the words of the testim her Monthly Meeting, "exemplary in her l conversation, and was a promoter of piety. ing left a widow, she built a meeting-house, at her own cost. "She lived in good unit her friends, and died in the Tenth month, 17 the 72d year of her age, and was buried Harbour."

PHEBE STOCKDALE.

Phebe Stockdale was the wife and widow liam Stockdale, a prominent and valuable cit Bucks county, who, during several years, sented that county in the Assembly of Pennsy He was a member of the Society of Friend as far as we know, was consistent in his li conversation; nevertheless his services in re society do not appear to have been great.

Phebe being brought under the sanctify fluence of Divine grace, and, submitting t was qualified for religious usefulness. She re a gift in the ministry, which, under the fre ointing given her in the Lord's time, she w

d to exercise for the comfort, strength and in-
e of the church.
wards the close of the year 1728, she removed
the limits of Horsham Meeting, in Philadel-
county, where she continued to reside during
est of her life. She was at this time aged, yet
ars to have been faithful to her religious duties.
mities of body seem to have attended her to-
the close, and we find her excused by her
g brethren and sisters from attending to some
pintments, for which her bodily strength was
sufficient.
er decease took place in the Eleventh month,
3. She had the unity of her friends to the
, and had been a minister for many years.

JOHN DYER.

ohn Dyer appears to have been the head of a
dy, and to have received a gift in the ministry
he gospel when he came to this country. He
ed at Plumstead, Bucks county. His friends
of him: "Though he did not travel much abroad,
ue was very diligent in attending meetings at
near home, and was frequently enabled to bear
blic testimony to the Truth, which was to the
faction, edification and comfort of Friends. He
ased (at Plumstead, where he lived many
s) on the 31st of Eleventh month, 1738."

(To be continued.)

For "The Friend."

n the solitary feelings which sometimes come
w the mind from the circumstance of there seem-
to be so few persons of much religious experi-
e, with whom we can commune, and from whom
may derive strength and encouragement to hold
n our spiritual journey, we may often find a
uable substitute in reading the lives of such men
women, especially of those with whom we had
sonal acquaintance, and whose memory as ser-
nts of the Lord is precious to us. Looking over
journal of William Savery and his labours in
rope, we meet with several of that character,
o went from this country, and of some who had
e from thence on the same errand, who were
ently engaged in preaching the everlasting gos-
, and whose meat and drink it was, in the put-
g forth of the divine hand, and in the authority
l power which He dispensed, to gather the people
he inward teaching and government of the Lord
us Christ. Men, who never thought of lecturing
on doctrines as teachers of our principles, in order
make proselytes, but whose reliance was solely
ced in the great Minister of the Sanctuary; and
y dare not attempt to open their mouths in the
nistry, but as they received from him the matter
ich he furnished for the people. They did not
point meetings, nor speak in them for fear of the
ciety becoming small in number, but on the
und of divine requiring from their Lord, that
y might fulfil the work he assigned them, leaving
to him to prosper their labours, and carry them
the object whereunto he sent them. The reading
their lives seems to bring the exercised traveller
o unity with those spirits—so that though dead,
ey yet speak, and encourage him to hold on his
y in living faith in the same power which made
em what they were.
While David Sands and William Savery were at
erlin, they met with Major Marconnay, who
id been a man of note, and held an office under
e king of Prussia. He attended one of their re-
gious meetings, held conversations with them,
spected his religious exercises, in seeking the
ruth among different professors, but was dissatis-
ed, though divers of them made high pretensions,
id at length he left all, laid down his office, and lived a retired life. He now found *that* among the Friends, which he never was acquainted with before; saying he believed they were sent there in the will of God for his and others' help. He asked them a few questions in a very tender frame, and was much broken with their answers. After some religious communication and prayer, they parted, his mind being relieved, and, they hoped, convinced of the way of Truth. On their arrival at Pyrmont, they found a letter written by him, showing his regret that they had not had an interview with the king, owing to his absence from the city at the time—also further describing his feelings and his love to those Friends. It furnishes evidence of a mind, struggling under religious exercise, and longing for a more full participation of the glorious liberty of the sons of God. In proportion as the humbling, sanctifying and illuminating power of the Spirit of Truth is submitted to, and the life and substance of religion is experienced, the soul becomes increasingly sensible of the emptiness and unsatisfying nature of outward forms and ceremonies, and longs for communion with the Father, and with the Son, through the Holy Spirit. The letter and the account of their services there, also serve to show the affection and fellowship felt towards our Friends by some they met with in their journeyings, and that their ministry was in the demonstration of the Spirit and of power, and was instrumental in awakening others to a serious consideration of the things which belong to their everlasting peace—and in confirming those who in measure were brought to possess substance.

The following is a translated copy of the letter addressed to W. Savery and D. Sands:—"My last words to you, dear brethren, were, 'God be with you'—words that came from the fullness of my heart. I love you with my soul. I was never so soon inclined to unite with any men as I was to unite with you; and never felt so soon a constraint to open my mind to any as I did to you. I have opened this heart of mine into your loving souls; but yet you are not wholly acquainted with my tried situation; for there are feelings which cannot be expressed in words—I seem as if I was forsaken of God, and yet I abhor the thought. I have no desire to live or to die—for the pleasures of the world, let them be what they may, I have neither taste, sense, nor feeling; but who will believe, that notwithstanding the disgust of the world, my heart remains shut up from higher and heavenly enjoyments. The precious sense of the Sonship with God, the assurance of faith, and the consolations of the word; of all that I formerly enjoyed, tasted and felt of those gracious gifts, I have now scarcely a remembrance. My prayers are weak and powerless, as if I cried unto God from afar, so that he cannot hear me. This is also a thought I abhor. Such, my dear brethren, are nearly the circumstances of my soul. Let your hearts now feel with painful compassion, how it is with me; and fall down on your faces before the throne of the great and merciful Being, and pray for your weak and wounded brother, that Jesus Christ may again be formed in my heart, and that I may again rightly fix my eyes on him; then shall I be able to stand in this heavy exercise. I shall then take from his hand the bitter cup, and not murmur, but wait for his help. Then I shall be enabled in the end to exclaim, 'Lord, Lord God, gracious and merciful, thou art great in thy kindness and faithfulness; who was ever confounded that put his trust and hope in thee?'

"Yesterday the minister, Howick, sent for me, and said he had just received a letter from the king, who was willing and ready to give you an audience; and Oh! how gladly could I have called you back, as I wished most heartily an interview between you and our good king. I told the minister, it was possible you might have staid over yesterday, the 21st, at Potsdam; on which he immediately dispatched a chasseur to the general Bisshoswerd, notifying him that you might probably still be there. Whether the chasseur has met with you, I know not; but if it be according to my wishes, you will have an audience with the king tomorrow morning, at nine o'clock. And in this case I desire you to give me, as soon as possible, a circumstantial information of your conference; for be persuaded, I shall not make any bad use of what you may intrust me with. Your letter to the king, the minister sent to him yesterday; but the books which the messenger could not take, were sent to the monarch to-day.

"Now for the conclusion: God be with you; his light be your guide; his love and grace, in and through Jesus Christ, your protection and defence in all danger; be of good comfort, and filled with joyful hope. He that is with you, is stronger than he that is against you. Never shall your memory be effaced from my soul; I shall not cease to love you; it will be a comfort to my weary soul, if sometimes you will make me joyful by imparting a few lines of love, and nothing but death will be able to prevent my answering your letters. In love I embrace you in my heart, as your ever loving brother. MARCONNAY."

"Berlin, 22d of October, 1796."

The evening before W. Savery and D. Sands left Berlin, they held another meeting, to which about one hundred and twenty came, who professed their full unity with the doctrines proclaimed, and took a solemn leave of them in tears, commending them to the heavenly Shepherd, and requesting the prayers of the Friends when separated. "Dear David Sands and myself," says W. S., "on comparing our sense and feelings at different times, were united in the belief, that we never were among people, to whom the love of God more richly flowed, than to many in this place; nor any that were made more near to us in the love and life of Christ." When the cloud that everywhere rests upon the Society, is through divine mercy dispersed, and a fresh illumination is granted, to behold the beauty and excellency of the christian testimonies we have been called to uphold to the world, we may hope that such men will be again raised up and qualified, like judges as at the first and counsellors as at the beginning, to proclaim in their ancient simplicity and purity, the truths of the everlasting gospel, and to visit the Seed, which lies oppressed in the hearts of many; which will be to the joy of the Lord's tribulated children. Faithful obedience to the Lord is indispensable to our own welfare, and it is highly important by precept and example to draw others to the love of the Truth, and to hand down its doctrines to posterity unimpaired by us.

For "The Friend."

Somewhat similar to the interesting testimony of John Conran relating to plainness of dress and language, given in the 46th number of "The Friend," is that of *John Barclay*, who says, "It does appear to my view highly and imperatively necessary, that an internal change should precede an external one, I believe that conversion is that of the heart; that profession must follow, not go before possession; and that an outward show and appearance of peculiar seriousness is hypocrisy and increased condemnation, if not accompanied by the inward work of sanctification in the soul. *Nevertheless*, it is certain to my mind, that one invariable evidence of true religion having entered and *taken up its abode*

in us, will always be, that we no longer conform ourselves to this world in its vanity and folly; and that in our dress, address and general conduct in every particular, we shall not be governed by worldly maxims or opinions, but by the law written in our hearts.

Rag and Paper Consumption of the United States.

The Evening Post of the 21st ult., published a paragraph on rags, which contains some curious and interesting statistics. It appears that we imported in 1853 from all countries 22,766,000 lbs., of which we received from England 2,666,005 lbs., and from Italy about one-fifth of the whole. The total importation, as given in the Post, corresponds with the official returns for 1853; but there is obviously some mistake in the ratio of importation from Italy relatively to that from all other countries, which, as the subject is unquestionably an interesting and novel one, not often entering into statistical investigations, we will endeavour very briefly to reconcile with such statistics on the rags and paper trade of the United States, Great Britain and France, as are accessible at the moment.

The following tabular statement exhibits the aggregate quantities, values, and prices per pound of rags imported into the United States from all countries, distinguishing in a separate column the quantities received from Italy during a period of ten consecutive years, from 1846 to 1855:—

Years.	Rags imported from all countries. Pounds.	Rags imported from Italy. Pounds.	Aggregate values. Dollars.	Price per pound. Cents.
1846	9,897,706	8,002,865	385,397	3 89
1847	8,154,886	6,529,234	304,216	3 68
1848	17,014,587	13,803,036	626,607	3 68
1849	14,941,236	11,009,608	524,765	2 51
1850	20,696,875	15,861,266	748,707	3 61
1851	26,094,701	18,512,673	903,747	3 46
1852	18,288,458	12,220,570	626,729	3 42
1853	22,766,000	14,171,292	982,837	4 31
1854	32,615,753	24,240,999	1,010,443	3 09
1855	40,013,516	23,948,612	1,225,151	3 06
Agg'e	206,631,954	148,300,155	$1,192,865	
An average,	20,663,195 2-5	14,830,015¼	819,286¾	

From the preceding table it will be seen that during the decennial period ending with 1855, the aggregate quantity of rags imported into the United States from all countries was 206,631,954 pounds, while the average quantity received from Italy reached as high as 148,300,155 pounds.

The annual average for the period designated will, however, furnish a more statistical basis for ascertaining the relative importance of Italy compared with all other countries as the principal source of supply upon which the United States must rely, with any degree of certainty, for an article, the consumption of which is so rapidly increasing there; even during the past year, an alarming deficiency in the manufactured material was seriously apprehended by the conductors of our periodical and newspaper journals. The average annual quantity imported into the United States, from all countries, during the period designated, was 20,663,195 lbs; the average annual quantity received from Italy was 14,830,015 lbs. Thus it is shown that instead of one-fifth, as stated in the Post, Italy actually furnishes nearly two-thirds of all the rags imported into the United States.

The Post's paragraph further states that the consumption of paper in the United States is equal to that of France and England combined. In other words, that the 25,000,000 inhabitants of the United States consumed as much paper as the 64,000,000 inhabitants of France and England. This is very nearly correct. The statistics, however, will prove interesting.

According to McCulloch, the number of paper-mills in operation in England in 1835, was 750, and the annual value of the paper manufactured, reached as high as $6,000,000. At that period, however, the manufacture of paper was burdened with an excise duty amounting to more than three times as much as the total wages of the hands employed in making it, and the quantity annually produced did not exceed 50,000,000 lbs. of first class and 16,000,000 lbs. of second-class paper, requiring a supply of about 100,000,000 pounds of rags.

Improvements in machinery and mode of manufacture, and the application of steam, have reduced the number of mills in Great Britain and Ireland to 380, according to the latest statistical returns; while the quantity of rags annually consumed has risen to 201,600,000 lbs., or over 100 per cent. We have compiled from a recent, though in this country a rare, Dublin publication on statistics, the following tabular statement, showing the quantity of paper manufactured, consumed and exported in Great Britain for a period of nine years, ending with 1854:—

Comparative Statement showing the Quantities of Paper Manufactured, Consumed and Exported in Great Britain, from 1846 *to* 1854.

Years.	Pounds of paper manufactured in Great Britain.	Pounds of paper retained for consumption in G. Britain.	Pounds of paper exp'd from G. Britain.
1846	127,412,482	122,605,926*	4,836,556
1847	121,965,315	116,111,336	5,852,979
1848	121,820,229	116,639,943	5,180,286
1849	132,132,660	126,165,341	5,966,319
1850	141,032,474	133,269,788	7,762,686
1851	160,903,543	142,597,945	8,305,598
1852	154,469,211	147,140,325	7,228,886
1853	177,633,010	164,336,135	13,296,874
1854	177,896,206	161,784,204	16,112,020

France turns into paper annually about 235,200,000 lbs. of rags, producing about 156,800,000 lbs. of paper. In the United States there are 759 paper-mills, which work up each year, about 405,000,000 lbs. of rags. Assuming (the usual estimate) that 1½ lbs. of rags yield 1 lb. of paper, we have the following comparative statement for the United States, and France and Great Britain combined:—

	Pounds of rags annually consumed.	Pounds of paper ann'ly manuf'd.	Pounds of paper per cap.
Great Britain and France combined	436,800,000	291,200,000	4.55
United States	405,000,000	270,000,000	10.80

From this statement it appears that the United States consumes 31,800,000 lbs. of rags, and manufactures 21,200,000 lbs. of paper less than Great Britain and France combined, while the quantity of paper manufactured *per capita* of the population of the former is more than double that assigned to the combined population of the two latter. The quantity of paper imported in Great Britain and France and added to the stock for consumption might vary slightly, but not materially, the above results.

The preceding statement, however, omits the quantities annually imported and exported by each of the countries respectively, items without which no calculation as to consumption can be accurately made.

The importation of paper of all kinds into France, in 1853, did not exceed 337,104 lbs. while the exports amounted to 17,053,657 lbs. This gives an excess of exports over imports to be supplied from the stock of domestic manufacture, of 16,716,533 lbs. Deduct this from 156,800,000 lbs., the quantity manufactured, and we have left for consumption 140,083,447 lbs., or 3.89 lbs. *per capita* of the population.

During the same year, there was imported into England, according to the Report on Trade and Navigation, 909,250 lbs. of paper. The report gives this quantity for the last six months of the year only—assuming that the importation during the first six months was equal to that for the last as above given, and the total importation would reach, 1,200,000 lbs.* The quantity exported, we have seen, was 13,296,874 lbs., leaving an excess of exports over imports, of 13,696,874 lbs., to be deducted from the quantity retained for consumption, thus reducing the figures already given in the column under that head to 151,230,261 lbs., as the actual consumption in Great Britain during the year, or 5.40 lbs. *per capita* of the population.

The United States official returns give the value but not the quantities of paper imported and exported; but as the imports usually exceed the exports the quantity consumed is seldom if ever less than the quantity manufactured.

We have then for annual consumption in the United States 270,000,000 lbs.; consumption *per capita* 10.80 lbs.

Annual consumption in Great Britain and France combined, 291,322,708 lbs.; consumption *per capita* 4.55 lbs.

Thus, it appears first, that the consumption of paper in the United States, *per capita* of the population, is over 100 per cent. more than in England and France combined; and second, that Italy supplies us with nearly two-thirds of the rags annually imported into the United States from all countries. The first fact is susceptible of an easy explanation. This explanation is found in the character of our institutions, in the genius of our government, in the general diffusion of knowledge among the masses of our people, in our cheap literature, in the numbers of our authors, orators and statesmen. It is also to be traced in the fact that we publish more readable books, periodicals and public journals, than all other nations combined, and are consequently more abundantly supplied with the "raw materials of every kind of science and art, and of all social improvement."

Various causes may be given in explanation of the second fact. It may be because the chief primary raw material of paper, hemp and flax, is among the most abundant natural productions of the different States of Italy, and the high price which Italian rags always command, favours the supposition; or, it may be, that in point of fact, we are indebted to Turkey and Greece for a large portion of our imports of this article through the ports of Trieste, Genoa, Naples, &c. And who has not heard of the extravagant manufacture of the raw material of paper, in these two countries? "If a sudden tear," says a late English writer, "or a stitch give way suddenly unfold this garment, (his cotton paletot coat,) a Greek hurrying on, will leave a flag near a quarter of a mile long, fluttering behind him. Nor is the use of cotton confined to the person; his bed blankets, furniture, his covering by day and night is of the same material." But perhaps the true explanation is found in the history and character of the exporting countries; for their statistical returns show that as they advance in the arts of civilization and social progress—as they acquire

*These two columns comprise the paper manufactured and consumed in Ireland.

* This should be 2,000,000, and should be added to the amount of domestic manufacture, retained for home consumption: the excess of exports over imports 11,296,874 instead of 13,696,874, and the quantity retained for home consumption would be 166,336,136 instead of 151,230,261, being a difference of 15,105,875 lbs., and increasing the consumption per capita to nearly 6 lbs.—*Ed. of Friend.*

ve a taste for letters, and unfetter the faculties
e human mind, their exportation of rags diminin ratio proportionate to the increase of books,
as a necessary consequence, to the diffusion of
ledge. Where freedom of speech, and of the
s, are recognized among the inalienable rights
e citizens, rags are unknown as an article of
gn commerce.—*Ledger.*

From the Annual Monitor for 1856.

ohn Hurst, of Spalding, a minister, deceased
th mo. 21st, 1855, aged 79 years.
his dear friend had not the privilege of a birthg in our religious Society, and we have no inration respecting his early life, nor any particulars in regard to his convincement of the truth
ur christian principles. It appears, however,
he was admitted into membership about thirtyor forty years ago.
is education was extremely limited, and his
pation was that of an agricultural labourer, in
h character he was long known, to Friends
others, as a diligent and faithful servant.
ugh by persevering industry and economy he
enabled to lay by sufficient to provide himself
the simple necessaries of life, in advancing years,
ight still be said to belong to "the poor of this
d;" yet "rich in faith." When on some occas, his friends would gladly have contributed to
ecuniary means, he was "not easy" to accept
e aid, because he thought "he had enough."
odliness with contentment" was here seen to be
eat gain."
though not intrusted, in any point of view, with
y talents, yet by the steady and unobtrusive
of those which he had received, he became a
ht example of christian faithfulness in his
ardship, and it was evident that in more than
respect, the blessing of increase was remarkably
owed upon him.
o unite with his brethren in the solemn duty of
lic worship was his constant practice, and his
gence in attending meetings for discipline, often
a great distance from his home, was very explary, and he was not unfrequently employed
important appointments in connection with the
irs of the Society, and the exercise of the care
the church towards its members.
le was a very frequent attender also of the
rly Meeting in London, and for a considerable
ber of years, acceptably filled the office of elder.
ring the latter periods of his life, and whilst in
s station, he was concerned to appear amongst
friends in the character of a minister of the
pel, and was in due time approved and acknowged as such. Till near the close of life, his comnications in the ministry were generally short,
pertinent, and though not with wisdom of words,
the fruit of deep and lively exercise of spirit,
the edification and instruction of the hearers.
wards the evening of his day, however, and
lst still able to attend meetings, our dear friend
s considerably enlarged in his gift as a minister,
l favoured with increased ability to exercise it.
l within the last few months, in which his faculs failed a little, his path appeared to shine
ghter and brighter unto the perfect day.
o two friends who visited him a short time be-
e his decease, he said, "that having one evening
long ago, retired to rest, low and discouraged
mind, he was remarkably cheered and comforted
ring the night, by the firm belief, mercifully
nted him, that he was accepted—not for anyng that he had done or could do—but *in the loved;*" adding more to the same import.
Thus humbly resting upon the sure foundation,
sus Christ himself, he was permitted to close his earthly days in peace. "If there be first a willing mind, it is accepted according to that a man hath, and not according to that he hath not;" and to the serious reader the character and religious attainments of this dear Friend, especially his patience and christian dedication, under circumstances often peculiarly discouraging, may perhaps not unprofitably suggest the language, "Go thou and do likewise."

Volcanic Eruption in the Moluccas.—The India mail brings intelligence of an eruption of an active volcano on the island of Great Sangir, lat. 3 deg. 50 min. N., long. 125 deg. 50 min. E. The mountain of Arva, 4,000 feet above the sea, suddenly, on the 2d of Third mo., discharged boiling water and lava, which destroyed for several miles extensive fields, crops and groves of cocoanuts:

This frightful picture of destruction, the horror of which was increased by the shrieks of men and beasts, the wild roaring of the tempest, and the crashing of thousands of trees torn up and carried away, was followed, about an hour later, by peals of thunder which shook the ground and deafened the ear. A black column of stones and ashes then shot up from the mountain to an immense height, and fell, illumined by the glare of the lava, like a shower of fire upon the surrounding country below, producing a darkness, that, only now and then momentarily broken by the flashes of lightning, was so intense, that people could not discern objects close at hand, and which completed their confusion and despair. Large stones were hurled through the air, crushing whatever they fell upon. Houses and crops, which had not been destroyed by fire, sunk and disappeared beneath the ashes and stones, and the hill streams, stopped by these barriers, formed lakes, which, breaking over their banks, soon proved a new source of destruction. This lasted some hours. About midnight the raging elements sank to rest; but on the following day, about noon, they resumed their work of destruction, with renewed violence. In the meantime, the fall of ashes continued without intermission, and was so thick on this day that the rays of the sun could not penetrate through it, and an appalling darkness prevailed. Scarcely recovered in some degree from their fright, the inhabitants of this desolated part of Sangir were again disturbed by an eruption on the 17th of Third mo., which destroyed many fields and a great number of trees on the Tabukan side. Since then the volcano has remained quiet.

The loss of life has been great. It is estimated as follows, in the under-mentioned districts:—Taruna, men, women and children, 722; Kandhar, men, women and children, 45; Tabukan, men, women and children, 2039; total, 2,806. The greater number met their death in the gardens. They fled in all directions, but were overtaken and swallowed up by the fatal fire-stream. Some tried to save themselves in the trees, but were either carried away with them or killed by the scorching heat.—*Late Paper.*

Selected.

There lived many years ago, in Philadelphia, a celebrated Indian chief, by the name of Tedyuscung. He was sitting one evening by the fireside of a friend, both of them looking silently at the fire, indulging their own reflections.

At length the silence was interrupted by the friend, who said, "I will tell you what I have been thinking of; I was thinking of a rule delivered by the Author of the Christian religion, which, from its excellence, we call 'the *Golden Rule*.'"

"Stop," said Tedyuscung, "don't praise it to me, but rather tell me what it is, and let me think for myself. I do not wish you to tell me of its *excellence*—tell me what it is."

"*It is, for one man to do to another, as he would the other should do to him!*"

"That's impossible! it cannot be done," Tedyuscung immediately replied; and, taking his pipe, lighted it, and commenced walking about the room. In about a quarter of an hour, he came up to his friend with a smiling countenance, and, (taking the pipe from his mouth,) said, "Brother, I have been thoughtful on what you told me. If the Great Spirit that made man would give him a *new heart*, he could do as you say, but not else."

"A new heart also will I give you, and a new spirit will I put within you; and I will take away the stony heart out of your flesh, and I will give you a heart of flesh."—Ezek. xxxvi. 26.

How many things are there that now give us pleasure or pain, and assume a mighty importance in our view, which, in a dying hour, will be no more to us, than the clouds which fly unnoticed over our heads. Then the truth of our Lord's declaration will be seen, felt, and acknowledged,—"One thing is needful." And we shall be ready to apply Grotius's dying confession to, alas! a great part of our lives:—"Ah, I have consumed my life, in laboriously doing nothing!"—*John Newton.*

To hear two men talk the reverse of their own sentiments, with all the good breeding, and appearance of friendship, imaginable, on purpose to cozen or pump each other, is to a man of virtue and honour, one of the most melancholy, as well as most nauseous things in the world.

THE FRIEND.

EIGHTH MONTH 30, 1856.

Summer is generally a time of scattering; to those who live in cities more particularly. Families remove to reside, during the warm weather, some in one part of the country, and some in another. Individuals travel abroad in pursuit of health or pleasure, and the family band is thus often broken, while the intercourse of many a social circle is almost entirely suspended. Our meetings are greatly reduced in numbers, and but few are to be found to attend to the duties connected with the various departments of religious or civil society. It is generally hard work to get committees together, or to find a working majority of managers, or members of the different associations or societies. This, together with the relaxing effect of heat, has a depressing effect in the comparatively few who remain at their accustomed posts, and both mental and bodily labour seem more formidable, and to give rise to unwonted weariness. It is, therefore, cheering as the autumn approaches, to observe the change which it gradually brings about. The wanderers one after another return to their usual abodes, the social intercourse so long suspended is resumed, seats in meeting which have been vacant for weeks or months, are again filled by their accustomed occupants, and those who have returned with health and spirit renewed, resuming the performance of the parts assigned to them with alacrity, infuse fresh energy into all who have labour to perform. These annual changes, which to the young seem so long in coming round, to those who are near, or have passed the meridian of life, are felt to tread closely on each other's heels, and serve to impress upon us the rapidity with which life is passing away, and the soul hastening to its final audit. It is a striking evidence of the degenerate condition of man, that though conscious of the dignity of the station he was created to occupy,—a little lower

than the angels, and crowned with glory and honour —and believing that his immortal spirit must associate forever with spirits like his own, whether redeemed, purified and happy, or lost, depraved and inconceivably miserable, we are nevertheless so much more prone to be influenced by considerations of present ease and enjoyment—of things relating almost exclusively, to physical comfort or animal appetite—than by those that are connected with our regeneration and preparation for a participation in the joys and glory of heaven. The labour which many undergo in order to obtain the means, or to remove the obstructions to their annual change of residence, from town to country, or their excursions to mountain scenery or sea-shore recreations, the abundance of thought and pains bestowed either in anticipation and preparation, or in carrying the matured plans into effect, may be all allowable and proper, but it is worthy of every one's consideration how far they are kept subordinate to the far more important consideration of entering and persevering in the right road through the journey of life, and being got ready for our approaching removal to "that good country the other side Jordan."

The past summer, notwithstanding the great heat which prevailed for a short time, has been a very pleasant one. The drought that afflicted some sections of the country for a few weeks, was succeeded by fine rains, which watered the earth in time to secure the perfection of many of the late crops, and the country generally, as well as the cities, has mostly been favoured with a large share of health, there being no wide spread epidemic. It is saddening to think that amid all the blessings thus showered upon the land by a bountiful Providence, there is yet so much wickedness abounding, and so many restless, intriguing spirits at work, striving to carry out their nefarious schemes of personal aggrandizement, regardless of their disastrous consequences.

SUMMARY OF EVENTS.

EUROPE.—News from Liverpool to 13th inst.

In Great Britain, there was no political news of importance. The latest intelligence from the French harvest, states that it has terminated in the south of France, and is proceeding in the centre and northern districts. It has proved inferior beyond the Garonne, and along the banks of the Rhine, middling between the Garonne and Loire, and excellent in every part, north of the Loire. The latest advices from Madrid report, that quiet prevails throughout Spain. Espartero had taken an amicable leave of the Queen. O'Donnell had not promulgated the policy of his ministry; he is said to be employed in endeavouring to incorporate the moderate men of all parties in the interests of the government. The cholera was committing great ravages in Madrid. The government of Portugal has officially notified the allied powers of its adherence to the doctrines propounded by the Peace Congress of Paris, in relation to the rights of neutrals, and a resort to arbitration. Advices from Madeira bring distressing accounts of the ravages of the cholera. In Funchal alone, there had been 5000 cases, and 1500 deaths, out of a population of 28,000. The militia has been everywhere disbanded throughout the Russian empire. The Russians have notified the Turkish government that they are prepared to give up Kars. Russia still maintains that the Isle of Serpents belongs to her dominions. The Russian government has granted charters to a number of railroad companies, formed by capitalists, the lines of which will exceed three thousand English miles.

Liverpool Markets.—Cotton was unchanged, with a moderate demand. The quotations for flour are as follows: Western Canal, 25s. a 31s.; Philadelphia and Baltimore, 31s. a 32s.; Ohio, 32s. 6d. a 33s. 6d. Yellow corn, 30s.; white, 31s. a 32s. Consols, 95 a 95⅛.

Three Days Later.—On the 25th inst., the steamship Niagara, with Liverpool dates to the 16th, arrived at Halifax. The markets were without change. The accounts of the crops throughout Great Britain, were favourable, and the yield will be fully an average one. The Persia made the last run from New York to Liverpool, in less than nine days. The cholera was increasing at Lisbon. A steamer, laden with provisions, had been dispatched by the Portuguese government to Madeira.

UNITED STATES.—*Congress.*—On the 18th, after the adjournment of Congress, a Cabinet meeting was held, and it was decided that the President should issue his proclamation calling an extra session on the 21st inst. At the appointed time, the two Houses reassembled in accordance with the proclamation. The President sent in a Message, strongly urging Congress to make provision for the support of the army, and pointing out the disasters and inconveniences likely to result if they should fail to do so. The House of Representatives again passed the army bill, with the Kansas proviso, and sent it to the Senate, which body again struck out the proviso. Up to the 25th, the two bodies had not come to an agreement. On the 23d, a motion that the House recede from the Kansas proviso, was lost,—yeas, 97; nays, 100. A motion that the House adhere, was carried,—yeas, 98; nays, 97. At the regular session, bills passed granting lands in alternate sections to aid in the construction of railroads in Wisconsin, Michigan, Iowa, Alabama, Mississippi, Louisiana and Florida. Many of the acts and resolutions passed, are of no general interest.

Destination of Immigrants.—The following table was prepared by the Superintendent of Castle Garden, for the use of the Committee on Public Lands of the House of Representatives. It shows the destination and amount of money possessed by all the immigrants, who arrived at New York, during the eleven months previous to Sixth mo. 30th, 1856.

Destination.	Number of Immigrants.	Am't of their Cash. cap.
Six New England States,	8,134	$121,523 01
Fifteen Slave States and D. C.	3,256	194,888 73
New York,	39,943	1,291,628 09
New Jersey,	2,272	214,955 79
Pennsylvania,	9,421	546,033 78
Ohio,	6,117	479,633 90
Indiana,	1,309	101,861 63
Illinois,	7,713	698,456 31
Michigan,	2,887	199,300 86
Wisconsin,	10,457	1,045,661 38
Iowa,	1,855	248,335 40
California,	806	165,125 13
Minnesota,	305	35,156 00
Kansas,	3	128 00
Utah,	1,829	55,670 93
Oregon	1	10 00
Total,	105,707	$5,398,369 54
Total of the free States and Territories,	102,351	$5,203,480 81

Kansas.—Fresh disturbances have broken out in this unhappy territory. It is impossible to get at the truth of the case, the facts being alike perverted and misstated by both parties. According to the accounts transmitted from St. Louis, the Free State men had assumed the aggressive, and attacked settlements of the pro-slavery party in several instances, with the object of driving their opponents out of the territory. The statements forwarded from Chicago, represent that the border ruffians were preparing to make a grand sweep over the territory, to band themselves together, and by one descent, murder or drive out of Kansas, the Free State population, and that the movements of that party were only in anticipation, and intended to frustrate the impending attack. There was much excitement in the border counties of Missouri; meetings had been held, and arrangements made for sending a large force into Kansas, for the protection of the pro-slavery settlers. The newly appointed Governor, J. W. Geary, has not yet left Washington. By the capture of the pro-slavery town of Franklin, the people of Lawrence possessed themselves of a cannon, quantities of ammunition and provisions, and nearly one hundred stand of arms, a part of which had been taken from them at the sacking of Lawrence by the sheriff's posse.

New York.—Mortality last week, 567. One death of yellow fever. A few deaths from yellow fever have taken place in the outskirts of Brooklyn, principally of persons, who had had some connection with the infected vessels at quarantine.

Philadelphia.—Mortality last week, 288.

The Storm at the South, extended largely over the cotton growing region of the Gulf, but no serious damage to the crop is believed to have arisen from it. The ripening of the plant will, however, be delayed beyond the usual time. On and near the Mississippi river, from Natchez to New Orleans, the injury to the cotton fields over which the storm swept, was serious and in many instances irreparable.

Miscellaneous.—Religious Toleration in Mexico.—The following is the article added to the Mexican Constitution granting religious toleration:—"15. No law order shall be issued in the Republic, by authority, prohibiting or hindering the exercise of any kind of religious worship; but the Catholic Apostolic Roman have been the exclusive religion of the Mexican people, Congress of the Union shall take care, by means of wise and prudent laws, to protect it in so far as this provision does not prejudice the interests of the people, the rights of the national sovereignty."

A Nation of Methodists.—The mission to the Friendly Islands has been so successful that the nation is a nation of Methodists, and the whole population, from the king (who is a "local preacher") down to his meanest subject, attend the Wesleyan ministry.

The Wild Rice, which is so abundant in the swamps of Minnesota, has been introduced into Connecticut, and the crop last year is said to have been excellent.

Telegraphs in Russia.—Professor Morse, it is stated, has contracted with the Emperor to establish lines of telegraph throughout the Empire. He has been treated with great respect in Russia.

The British Mint.—The coinage at this institution, from 1846 to 1855, inclusive, was as follows: of gold, £ 871,563; silver, £2,284,409; copper, £138,996.

The British Finances.—In the year ending Sixth 30th, 1856, the excess of expenditure over income £21,769,402. The gross income was £70,233,738. The whole revenue derived from customs, was not sufficient to pay the interest and expenses of management of permanent debt.

Fever at Charleston.—Advices to the 24th mention a large increase in the number of cases of yellow fever that city.

The Collins' Compensation.—The effect of the mail voted by Congress to Collins' steamship line, will be to reduce, at the end of six months, the compensation of $33,000 the trip for postal service, to $19,000, as a contract stood before the Company appealed to Congress for a body for larger pay, under the name of "extra" compensation.

Emancipation.—A Cincinnati paper says, "Catharine Smoot, of Jefferson county, Ky., was a passenger on the mail boat, from Louisville to this city, yesterday, with eleven slaves, whom she proposes to emancipate. She was offered $10,000 cash for them, but said the money was no temptation, as she would free her servants, because she was convinced it was her duty as a christian to do so."

ALBERT K. SMILEY will reopen his school for Boys, No. 84 N. Tenth street, on the 1st of Ninth month next. Circulars containing fuller information, can be had at the office, or at the drug store, corner of Tenth and Arch streets.

RECEIPTS.

Received from Jesse Cope, Pa., $2, vol. 30; from Joshua Macomber, N. Y., $2, vol. 29; from Wm. Fox, Agt., O., for Thos. Plummer, Jesse Metcalf, $2 each, vol. 29, and for Thos. Llewellyn, Robt. Milhouse, $2 each, vol. 30.

HAVERFORD COLLEGE.

The winter term will commence on Fourth-day, 15th of Tenth month. Terms, $250 per annum, including Tuition, Board and Washing. Applications for admission should be made early.

Address, Jonathan Richards, Superintendent, Haverford, P. O., Pa.; Thomas Kimber, 50 North Fourth street, Philadelphia; or Robert Pearsall Smith, 17 Mifflin street, Philadelphia.

EVENING SCHOOLS FOR ADULT COLOURED PERSONS.

Wanted, A Principal and two Assistant Teachers for the Men's School, and a Principal and three Assistants for the Women's School.

Application may be made to either of the undersigned.

JOHN C. ALLEN, No. 179 S. Fifth street.
SAMUEL ALLEN, No. 134 S. Front street.
WILLIAM L. EDWARDS, No. 37 Arch street.

DIED, on the 14th inst., ELIZABETH K. CARLILE, wife of Joseph J. Carlile, and daughter of John Kirkbride, in the 30th year of her age.

ROBB, PILE & M'ELROY, PRINTERS, Lodge street, opposite the Pennsylvania Bank.

THE FRIEND.

age to any part of Pennsylvania, for three if paid in advance, three and a quarter cents; part of the United States, for three months, if advance, six and a-half cents.

"Knowledge is Power."

(Continued from page 402.)

as been said, by persons whose opinions are attention, that spade-husbandry is, in some better than plow-husbandry; that is, that rth, under particular circumstances of soil tuation, may be more fitly prepared for the ces of the atmosphere by digging than by g. It is not our business to enter into a con- ion of this question. The growth of corn is ufacture, in which man employs the chemical ies of the soil and of the air in conjunction is own labour, aided by certain tools or ma- for the production of a crop; and that whether of chemistry or machinery—whe- the salt, or the lime, or the dung, or the which he puts upon the earth, or the spade plow which he puts into it—that power which e work easiest is necessarily the best, *be- it diminishes the cost of production.* If the oes not do the work as well as the spade, it s perfect machine; but the less perfect ma- may be preferred to the more perfect, because, other conditions into consideration, it is a r machine. If the spade, applied in a pecu- nner by the strength and judgment of the sing it, more completely turns up the soil, the clods, and removes the weeds than the which receives one uniform direction from ith the assistance of other animal power, then ade is a more perfect machine in its combina- ith human labour than the plow is, worked lesser degree of the same combination. But may be a machine which cannot be used dvantage to the producer, and is therefore irable for the consumer. All such questions e determined by the cost of production; and st in agriculture is made up of the rent of the profit of capital, and the wages of labour he portions of the produce belonging to the rd, the farmer, and the labourer.

l this brings us to the great *principle* of all nery. A tool of the simplest construction is hine; a machine of the most curious construc- only a complicated tool. There are many in the arts, and there may be cases in agri- e, in which the human arm and hand, with or t a tool, may do work that no machine can l perform. There aré processes in polishing, here is a process in copperplate printing, in no substance has been found to stand in the of the human hand. And, if therefore, the ith a spade alone does a certain agricultural work more completely than a man guiding a plow, and a team of horses dragging it (which we do not affirm or deny), the only reason for this is, that the man with the spade is a better machine than the man with the plow and the horses. The most stupid man that ever existed is, beyond all comparison, a machine more cunningly made by the hands of his Creator, more perfect in all his several parts, and with all his parts more exquisitely adapted to the regulated movement of the whole body, less liable to accidents, and less injured by wear and tear, than the most beautiful machine that ever was, or ever will be, invented. There is no possibility of supplying in many cases a substitute for the simplest movements of a man's body, by the most complicated movements of the most ingenious machinery. The laws of mechanism are the same whether applied to a man, or to a lever, or a wheel; but the man has more pliability than any combination of wheels and levers.

The natural machinery by which a man even lifts his hand to his head, is at once so complex and so simple, so apparently easy and yet so entirely dependent upon the right adjustment of a great many contrary forces, that no automaton, or machine imitating the actions of man, could ever be made to effect this seemingly simple motion, without showing that the contrivance was imperfect—that it was a mere imitation, and a very clumsy one. What an easy thing it appears to be for a farming man to thrash his corn with a flail; and yet what an expensive arrangement of wheels is necessary to produce the same effects with a thrashing machine! The truth is, that the man's arm and the flail form a much more curious machine than the other machine of wheels, which does the same work; and the real question as regards the value of the two machines is, which machine in the greater degree lessens the cost of production.

We state this principle broadly, in our examination into the value of machinery in diminishing the cost of production; that the value of a machine depends upon the combined accuracy and economy with which it will complete a desired result—the cost of the machine in the first instance, and the cost of maintaining it in good order, being taken into consideration. A steam-engine is well adapted to pump water from a well or cistern; yet no sane man would adopt it for the purpose of supplying in this way the wants of a small family. The importance of this principle is often overlooked in the details of practical life, by thoughtful and ingenious men. The patent office at Washington is crowded with models of inventions, exhibiting a wonderful amount of skill and design, and not one in ten of which have proved of any great value to the inventors or the public.

If we could imagine a man entirely dispossessed of the power of rendering the forces of nature subservient to himself, we should see the feeblest of animal beings. Man has no tools which are a part of himself to build houses like the beaver, or cells like the bee. He has not even learned from nature to build instinctively, by certain and unchangeable rules, but varies continually the form of his structural habitations. Indeed, the origin of all our architectural rules and styles, has sprung as it were by chance, from the rudest and most imperfect models. Whatever chance structures the early and uncivilized inhabitants of any country have fashioned from the materials afforded them as a shelter and protection from the weather, the same structures, with all their prominent features, have been perpetuated and reproduced by their more enlightened and opulent posterity. Thus we find the characteristics of the cavern and the mound in the Egyptian style of architecture, and the form and structure of the tent in the peaked roofs and conical buildings of the Chinese. The much admired architecture of the Greeks and the structure of the Parthenon perpetuates the form of the original rude cabin, while the descendants of the Teutonic races still reproduce in the arches of their Gothic cathedrals the leafy bowers and forest lodges of their ancestors.

Man, however, does not need to be instructed instinctively like the lower animals. His power is in his mind, and that rightly cultivated and developed teaches him to use the materials and forces of nature to construct edifices, arch tunnels, and build bridges, as surely and as effectively as instinct teaches the beaver to construct dams and embankments, or the bee to fashion combs and hexagonal cells. Through this power man has been enabled to subject the whole physical world to his dominion, and through it alone he obtains the prerogative of being able to progress. Animal instinct of to-day is no better or more improved than it was a thousand years ago; the swallow of to-day labours as unremittingly, employs as many materials in the construction of her nest, as did the swallow of three thousand years ago, and after all this experience, the structure and design of the nest last constructed will have no improvement upon the first. If man, however, were to rebuild at the present day the great pyramid of Egypt, or the temple of Solomon, he would construct better edifices than the originals with half the time and a tenth of the expense. Herodotus informs us that one hundred thousand men were constantly employed for twenty years in the building of the pyramid of Cheops: but all the materials which compose it could now be raised from the ground to their present position, by the combustion of less than five hundred tons of coal. "The instincts of man are faint and feeble, while to reason and faith the vistas are boundless." Wisdom is better than strength, "and the more that wisdom spreads, the more human strength is saved, and the more is comfort enhanced."

To act upon material objects, man arms his weakness with tools and machines. As we have before said, tools and machines are, in principle, the same. When we strike a nail upon the head with a hammer, we avail ourselves of a power which we find in nature—the effect produced by the concussion of two bodies; when we employ a water-wheel to beat out a mass of iron with a still larger hammer, we still avail ourselves of the same power. There is no difference in the nature of the instruments, although we call one a tool, and the other a machine. "A tool," says Mr. Babbage, "is usually more simple than a machine; it is generally used with the hand, while a machine is frequently moved by animal or steam-power. The simpler machines are often

merely one or more tools placed in a frame, and acted upon by a moving power." But neither the tool nor the machine has any force of itself. In one case the force is in the arm, in the other in the water, the steam, or the animal that turns the wheel. The distinctions which have been taken between a tool and a machine are really so trivial, and the line of separation between one and the other is so slight, that we can only speak of both as common instruments for adding to the efficiency of labour. The simplest application of a principle of mechanics to an every-day hand-tool may convert it into what is called a machine. Take a three-pronged fork—one of the universal tools; fasten a rope to the end of the handle; put a log under the fork as a fulcrum; and we have a lever, when pulled down by the rope, which will grub up a strongly-rooted large shrub in a few minutes. The labourer has called in a powerful ally. The tool has become a machine. Both machines and tools, however, are intermediate instruments to transmit, to modify, or to apply power; and with the exception of the power consumed in wearing away the rubbing parts—that is, in producing friction—and the small portions transmitted to the air, the amount of power transmitted is just equal to that received.

(To be continued.)

Epistle of George Fox.

To Friends, in the North of Ireland.

Friends,—In that which convinced you, wait; that you may have that removed, you are convinced of. And all my dear Friends, dwell in the life, and love, and power, and wisdom of God, in unity one with another, and with God; and the peace and wisdom of God fill all your hearts, that nothing may rule in you but the life, which stands in the Lord God. G. F.

Badgley, in Warwickshire, 1655.

Scraps For "The Friend."

Knox on the Parables.

In those words, "Behold a sower went forth to sow," we feel at once, that we have described to us, the first opening of the Gospel. This was self-evidently the first step in the evangelic dispensation; and the entire parable gives it as the foundation, on which all the sequel of efficacious mercy to man must depend. Therefore, most fitly says our Lord to his disciples, "Know ye not this parable? and how then, shall ye know all parables?"

Amongst the wonders of this parable, I cannot but notice the exactness with which the seed in stony places, describes the dangers which await the first stage of inward religion, and too often frustrate its growing into reality; and also, the equally remarkable justness of the thorns, as emblematic of those stealthy attachments to the increasing good things of earth, by which, even without loss of fair external appearances, so many, of what is called the religious world, have been made barren and unfruitful; of beginnings, which gave fairest promise of a successful issue, as the Poet says:

> "How oft by these, at sixty are undone
> The virtues of a saint, at twenty-one."

The seed on the rock perishes, because there is no root. Therefore, when the sun shines strongly from above, there is no adequate means of supplying strength from beneath. Root, is fixed vital principle. Where this is wanting, whatever may have been the warmth of movement, strong temptation, coming either in shape of pain or pleasure, will be yielded to; and the transient affection will pass off like morning dew. In the other instance, the seed in the thorny ground, there is no intimation of want of root. The vegetation has commenced, and has gone through its first stage. The earlier dangers are over. The sun has shined upon it, but there was no lack of moisture. Unfortunately, however, the soil has admitted principles of deadly tendency. There are thorns within, which counterwork the good seed, with equal depth, steadiness, and constancy. These too "spring up night and day, men know not how." In St. Matthew, these are, "the cares of this world, and the deceitfulness of riches." St. Mark adds, "the desires of other things," and Luke, "the pleasures of this life." Altogether, they take in every thing; and present to us an inward mystery of iniquity, most strictly (and how often fatally!) opposed, to the inward mystery of godliness.

In the good ground, the three degrees are remarkable; an hundred, sixty, and thirty; as if corresponding to that threefold description in Isaiah; "They shall mount up with wings, as eagles; they shall run, and not be weary; they shall walk and not faint."

It deserves notice, that Holy Scripture has made a threefold distinction, both of evil and of good characters. The evil characters are, "the ungodly, the sinner, the scornful." Psalm, i. 4. The good are "little children, young men, and fathers." John, ii. 13. Our Lord's words would seem to convey the idea, that what ought to be gradations in goodness, would appear as so many classes of the good; in consequence of the greater number, stopping at a lower stage. Thus, it may be feared, too many Christians have continued babes. "Oh," says a certain writer, "that it were not as clear as the light, and as discernible as the earth under our feet, that most Christians are weaklings, and of the lower forms in the school of Christ."

"The kingdom of heaven," says our Saviour, "is like unto leaven, which a woman took, and hid in three measures of meal, till the whole was leavened." A more simple illustration, one would think, could not be chosen; and yet, never were human words, in so small a compass, more pregnant with information. * * It works inwardly; imperceptibly—but unremittingly, profoundly, effectually. As it is allowed to work, instead of being destroyed by the lifeless heap in which it is hidden, it will, in the end, assimilate the whole to itself. "The whole shall be leavened."

Again: "The kingdom of heaven is like unto treasure hid in a field; the which when a man hath found, he hideth, and for joy thereof goeth and selleth all that he hath, and buyeth that field." This parable represents the person, as finding what he was not looking for; (the same as where the Almighty says through his prophet Isaiah, "I am found of them that sought me not:") he comes upon it unexpectedly: but recognizing its worth, not merely his judgment and his affections, but his passions, come immediately into operation. "He hideth it,"—an expression of fear; and "for joy thereof he goeth, and selleth all that he hath, and buyeth that field."

Thus it is generally, with the converted prodigal. He is, for the most part, reclaimed from profligacy, or roused from insensibility, by some unlooked-for occurrence; some awakening providence; some earnest address of a preacher; some opportune conversation of a friend or acquaintance. He becomes impressed with an object, which is to him as new and as strange as a hoard of gold, which had been concealed in the earth, could be to the finder of it: and, resolved to possess what he had discovered, there is no sacrifice, of what he has hitherto valued, which he is not ready to submit to. He sees that religion alone, *the vital religion* of the heart, can confer either present peace, or everlasting felicity; and earth, with all that earth can bestow, appears less than nothing, in comparison of the treasure which he has unexpectedly become acquainted. "For joy thereof, he goeth and selleth all that he hath, and buyeth that field." Again: "The kingdom of heaven is like unto a merchantman, seeking goodly pearls: who, when he had found one pearl of great price, went and sold all that he had and bought it." Scarcely could a figure have been found, more elegant or more simple. A pearl of finer kind combines a beauty, a richness, and a purity hardly to be matched in any other production of nature. To choose a pearl of matchless value, therefore, as the emblem of evangelic religion, would make this heavenly object as engaging to our mental taste, as it is, in its acknowledged nature, impressive on our understanding and our conscience.

The merchant-man is *seeking* goodly pearls; that is, the mind and heart are devoted to the pursuing of what is true, honest, just, pure, lovely, and of good report; and, no doubt, such is the mind which may be hoped for, from the blessing of God upon a wise and well directed education. But how excellent as these objects are, they are not "the one thing needful." They are but goodly pearls; but the one pearl of great price. That is, initiated habits of the most promising kind are formed, and the efficacious principle of inward and spiritual life has not yet come into clear and conscious operation. In such a pursuit, the interior vitality will not only remain unknown; and when distinctly understood, it will be so appreciated, by the rightly disposed mind, as to correspond most fully to this figurative representation. It is to be observed, that the parable of emotion, which were mentioned in the case of the treasure in the field, are not intimated. The decision of conduct is, however, exactly the same; they both sell all, and buy it. Clearly discovering the nature and excellency of vital Christianity, they choose it cordially, unconditionally, and at whatever cost, for their portion and their all of their inheritance. * * * On the last parable of all, that of the "Net," I need not dwell upon the "seventh seal," and the "seventh trumpet" of the Apocalypse, it apparently does little more than mark the final close. What is most remarkable in this seventh parable, is, that it repeats the doctrine of Heaven in separating real, from nominal Christians; proving thereby the necessity for this duplicated prohibition.

Management of Bees.

—*Editor.*—I have read with pleasure several articles in the *Farmer* relative to the management of bees in winter, but no inducements to adopt any system are laid down. I am somewhat engaged in the culture of honey and the honey-bee, and so far have been very successful; yet there are certain backs which require attention, which we can only do if we will. I object to putting bees in a cellar or packing them in straw, and also burying them in the ground. In the first place, a damp situation will sooner or later prove downright ruin to them. It would be very likely to mould their combs, because disease and death; I should as soon think of wintering a family of children in a cellar and bury them come out healthy in the spring, as I would a swarm of bees. Packing them in straw is wrong, as you must necessarily stop a free circulation of pure air, which is so essential to all animal life. The method of burying them in the ground is, if possible, worse than either of the above, as closer confinement and consequently a greater degree of dampness must prevail. I believe that in ordinary circumstances six swarms out of ten would either die or be worthless the first season buried in the ground. A swarm reduced from

and to two or three hundred would be almost
less.
o method which I practise has been successful,
having lost a swarm either in winter or spring.
ves are twelve inches square inside, with an
ng in front and rear for egress and ingress,
nches long and half an inch high, with a seven-
ne glass inserted in the rear, for the purpose of
sing their operations, and ascertaining if they
a sufficient supply of honey for winter use,
he glass to be covered by a door that can be
d and shut at pleasure. About the first of
mber the hive should be placed down closely
the bottom-board, with the front and rear
ce opened for a free circulation of pure air,
is indispensable. I now place the hive in a
unoccupied room, that is rather cold; even if
ermometer should run to ten or fifteen degrees
the freezing point, it would do no harm, and
d be kept at as even a temperature as possible.
s condition a swarm of bees will consume ten
lve pounds of honey less than they would
hey exposed to the rays of the sun. In the
e of the winter I occasionally open the door,
rear of the hives, to ascertain their condition,
careful to keep the frost and ice out of the
nces.
hen sufficiently warm, say the last of March,
nay be taken from the room and placed upon
e-stand, where they are to be kept for the
er, and if the weather be favourable, and the
wish to issue out, I open the door in the rear
hive for the purpose of letting in the light,
careful not to let any of the bees out until
bor has been opened at least twenty-four hours,
y so doing I prevent them from being blinded
e rays of the sun, especially when there is snow
ground. Having practised the above system,
assured that there is no safer way, and feel
ent that should any feel disposed to follow
irections, they would not fail of success.
spring management is somewhat different.
ng them now placed upon the stand, I close the
ntrance perfectly tight, to stop the current of
nder them, at the same time letting the rays
sun strike fully upon the hives, to assist in
ng a sufficient degree of heat to propagate the
and larvæ, and at the same time ascertain if
is enough food for them, and if there is not
th, feed them with a little honey or syrup, and
will return as many dollars, as cents are paid
e trouble.

Emigration to the United States.

cording to official documents, 4,212,624 per-
of foreign birth arrived in the United States,
g the period of 36¼ years, ending Twelfth
91st, 1855.
these, 207,492 were born in England; 747,930
land; 34,559 in Scotland; 4,782 in Wales,
1,348,682 others were born in Great Britain
reland, the division not designated; 2,343,445,
number born in the United Kingdom; 1,206,
were born in Germany; 35,895 in Prussia;
38 in Holland; 6,991 in Belgium; 31,071 in
erland; 188,725 in France; 11,251 in Spain;
9 in Portugal; 3,059 in Denmark; 29,441 in
way and Sweden; 1,318 in Poland; 938 in
ia; 123 in Turkey; 7,185 in Italy; 108 in
ce; 338 in Sicily; 706 in Sardinia; 9 in
ca; 116 in Malta; 526 others were born in
pe, the division not designated; 91,699 were
in British America; 5,440 in South America;
in Central America; 15,969 in Mexico; 35,
in the West Indies; 16,714 in China; 101 in
East Indies; 7 in Persia; 16 others were born
in Asia, division not designated; 14 were born in Liberia; 4 in Egypt; 5 in Morocco; 2 in Algiers; 4 others were born in the Barbary States, the division not designated; 2 were born at the Cape of Good Hope; 118 others were born in Africa, the division not designated; 278 were born in the Canary Islands; 1,288 in the Azores; 203 in Madeira; 22 in Cape Verde; 59 in Sandwich Islands; 5 in Society Islands; 79 in South Sea Islands; 3 in Isle of France; 14 in St. Helena; 20 in Australia; 157,537 in countries not designated by the returns.

Ireland contributed the largest portion, for it is estimated that in addition to the number above stated, 747,930 who arrived in the United States, and were known to have been born in Ireland, at least one million of the number attributed to Great Britain and Ireland were also born in the latter country. This would make the total Irish immigration 1,747,930.

For "The Friend."

The following extract from the Journal of that faithful minister of the gospel, John Griffith, is inserted by the request of a correspondent in Western Pennsylvania, and commended to the serious consideration of its readers.

"Oh! what a pity it is, that old professors, instead of being as pillars in the house of God, and as Aarons and Hurs, bearing part of the Lord's great work, so happily and gloriously begun in the earth, should be a means of obstructing the same, and by the carnality of their spirits, burden and greatly depress the Word of life in the messengers of Christ, sent in order to carry it on amongst mankind; thereby rendering themselves altogether unworthy to be named by his name, to taste of his dainties, or to live under this glorious manifestation of evangelical light and truth, to mankind!

"Is not the great design of the Almighty obvious, in gathering us as a people into his fold, to sit under his teachings, and consequently under his glorious manifestation, showering upon us great plenty of rain from above, and heavenly dew as upon Hermon's hills, that we might be as the garden of the Lord, full of fruitful plants and fragrant flowers, sending forth a sweet smell, yea, to be as a fountain of gardens, and wells of living water, and streams from the goodly beautiful mountains of Lebanon. It is written, 'Out of the belly of him that believes, shall flow rivers of living water.' By this it plainly appears, that the Lord's chosen people are like conduits, channels, or water-spouts, to convey the water of life into the wilderness, that it may become a fruitful field, and that the desert land may come to rejoice, and blossom as a rose; also into the sea, viz. amongst the nations, languages, tongues and people, to heal the fishes that are in this sea, the backsliders and distempered of mankind.

"But oh, how slowly doth this work go on! and what a little progress it hath yet made, to what was expected by those valiants, who first engaged against Babylon in the morning of our day, and made that kingdom shake! Many under the same profession in this day, are turned against the Truth, and at the same time that they pretend to maintain its cause, are supporting and strengthening the kingdom of Babylon all in their power, which is exceedingly strange, and perhaps would not be believed by hundreds that really are doing it. The reason is, they first of all have taken some draughts of the wine, out of Babylon's golden cup, whereby they are so intoxicated, as not to know what they are doing; so that, when they think they are serving God, they are serving Satan. Were not the Jews drunk with this cup, when they dreamed that God was their father, and at the same time were in reality of their father the devil, doing his works, when they thought they were doing God's works? This woful mistake has been, and is, almost general amongst mankind. When they suppress the measure of grace in themselves, and drink a few draughts as above-said, they are then fit to follow anti-christ whithersoever he will lead them. But he will take care, not to have much cross to the will of the flesh in his religion, lest they should be tempted to leave him; that being the very reason of the violence they have offered to the divine Witness, which formerly rose up against them in their minds, viz., because they saw if they followed that, the cross must be taken up, and self must be denied. At this they have stumbled; and though little sense is at present retained thereof, by reason of their intoxication, yet when they are summoned before the judgment-seat of Christ, and the books come to be opened, all will then see things as they really are, which do not at all change their natures, though, by the defect in the capacity before described, they be not seen or understood.

"It is worthy to be remembered, and deeply pondered by great numbers in our Society, that it was the rebellion and unfaithfulness of the children of Israel, that was the cause of their being turned back again into a barren, doleful, howling wilderness, when near the borders of the land of promise. They doubtless might have then entered, subdued the idolatrous inhabitants, and taken full possession thereof, had they believed in and obeyed the mighty Jehovah, who with an outstretched arm had brought them out of the land of Egypt, dividing the Red Sea in mercy to them, and for the destruction of their enemies. But what a long wilderness travel they had afterwards, for about the space of thirty-eight years, until all that people had fallen, except Caleb and Joshua, men of upright hearts whom the Lord honoured with being the leaders of an entirely new people to possess the land. Cannot the empty, formal professors amongst us, who, under great pretensions, have suffered a heart of unbelief, a rebellious heart, that has departed from the living God, and embraced this present world, read their own condemnation in this account? Shall they ever enter into the heavenly Canaan, or be accounted worthy to carry on his glorious work in the earth? No, verily; but they must fall into great condemnation, except they repent and redeem their misspent time, and another people be raised to maintain this glorious cause, to whom the Calebs and Joshuas in our Society will be as leaders and directors; like Priscillas and Aquilas, to expound unto them, who inquire the way to Sion, the way of the Lord more perfectly; for I am fully persuaded, our Society will not cease to be a people, nor the glory ever depart therefrom wholly, as it did from the Jewish, and in a great degree the lapsed Christian church.

"I have no doubt but that a people will be preserved from generation to generation, to contend earnestly for the faith once delivered to the saints, and to maintain the same with the doctrine and principles resulting therefrom, so eminently revived in our predecessors, and most surely believed by us. So that when it shall please the Lord to awaken the nations, there will be no occasion to expect new discoveries or other manifestations, but the Lord will show where he feeds his flock, and where they lie down at noon.

"I do not expect the present lethargy and almost universal indifference of all denominations of Christians about religion, is to continue very long, for the Lord's soul abhors it. I am fully persuaded he will arise in dreadful majesty, to shake terribly the earth; the power, wisdom, policy and splendor

thereof, and not only the earth, but the heavens also, that he may remove those things which can be shaken, that those things that cannot be shaken may remain. Then shall people see how empty and fruitless their religious pretensions have been. Then will their eyes and cries be to the Lord, to show them the pasture of the flock of his companions. Then will mankind receive a kingdom which cannot be shaken. But, oh! the bitter cups that must be drunk, and the vials of God's wrath that must be poured upon nations and kingdoms, before mankind in general, will be humbled enough to submit to the yoke of Christ, and to learn of him who is meek and lowly in heart. But he is Lord of lords and King of kings, and can turn and overturn, until the inhabitants of the earth are willing that he should reign whose right it is; 'for when the judgments of the Lord are in the earth, the inhabitants of the world will learn righteousness.'

"Great and marvellous have been the Lord's condescension and goodness, manifested four our help and preservation many ways; upon one whereof I cannot well omit a short remark, viz., the reviving of ancient zeal for the promotion of discipline and good order, which I find is almost general throughout the Society. That spirit of sound judgment, and the burning of that holy fire, which the Lord doth kindle in the hearts of the faithful, has never been wholly extinguished since we have been a people; though in some places, through the neglect of many, it hath burned faintly and languidly. This zeal has of late been much augmented, and the number of those who will not take bribes, that is, through favour and affection pervert judgment, is increased. I pray God, for his great name's sake and his people's preservation, that this good work may prosper! Public ministry, though a great blessing, help and comfort to God's people, may be shunned, evaded, and turned off by individuals: but the church cannot easily lose ground under a godly, impartial administration of sound judgment, and dealing in the way of good order and discipline, as this brings judgment home; 'thou art the man.' Here individuals must condemn the evil, or be disunited from the body, that it may not be infected or endangered by their defection."

From "Bell on the Hand."

(Continued from page 404.)

The extreme sensibility of the skin to the slightest injury conveys to every one the notion—that the pain must be the more severe the deeper the wound. This is not the fact, nor would it accord with the beneficent design which shines out everywhere. The sensibility of the skin serves not only to give the sense of touch, but it is a guard upon the deeper parts; and as they cannot be reached except through the skin, and we must suffer pain, therefore, before they are injured, it would be superfluous to bestow sensibility upon these deeper parts. If the internal parts which act in the motions of the body had possessed a similar degree and kind of sensibility with the skin, so far from serving any useful purpose, this sensibility would have been a source of inconvenience and continual pain in the common exercise of the frame.

The surgeon who has to perform an operation by incision, when he has cut through the skin, informs his patient that the greatest pain is over. If, in the advanced stage of the operation, he has to extend the incision of the skin, it is very properly considered as a great awkwardness; and this not only because it proves that he has miscalculated what was necessary to the correct performance of his operation, but because the patient, bearing courageously the deeper incisions, cannot sustain the renewed cutting of the skin, without giving token of severe pain.

The fact of the exquisite sensibility of the surface, in comparison with the deeper parts, being thus ascertained by daily experience, we cannot mistake the intention; that the skin is made a safeguard to the delicate textures which are contained within, by forcing us to avoid injuries; and it does afford us a more effectual defence than if our bodies were covered with the hide of the rhinoceros.

The fuller the consideration which we give to this subject, the more convincing are the proofs that the painful sensibility of the skin is a benevolent provision, making us alive to those injuries, which, but for this quality of the nervous system, would bruise and destroy the internal and vital parts. In pursuing the inquiry, we learn with much interest that when the bones, joints, and all the membranes and ligaments which cover them, are exposed—they may be cut, pricked, or even burned, without the patient or the animal, suffering the slightest pain. These facts must appear to be conclusive; for who, witnessing these instances of insensibility, would not conclude that the parts were devoid of sensation. But when we take the true, philosophical, and I may say the religious view of the subject, and consider that pain is not an evil, but given for benevolent purposes and for some important object, we should be unwilling to terminate the investigation here.

In the first place, we must perceive that if a sensibility similar to that of the skin had been given to these internal parts, it must have remained unexercised. Had they been made sensible to pricking and burning, they would have possessed a quality which would never have been useful, since no such injuries can reach them; or never without warning being received through the sensibility of the skin.

But, further, if we find that sensibility to pain is a benevolent provision, and is bestowed for the purpose of warning us to avoid such violence as would affect the functions or uses of the parts, we may yet inquire whether any injury can reach these internal parts without the sensibility of the skin being excited. Now, of this there can be no doubt, for they are subject to sprain and rupture, and shocks, without the skin being implicated in the accident. If we have been correct in our inference, there should be a provision to guide us in the safe exercise of the limbs; and notwithstanding what has been apparently demonstrated of the insensibility of these internal parts, they must possess an appropriate sensibility, or it would imply an imperfection.

With these reflections, we recur to experiment—and we find that the parts which are insensible to pricking, cutting, and burning, are actually sensible to concussion, to stretching, or laceration.

How consistent, then, and beautiful is the distribution of this quality of life! The sensibility to pain varies with the function of the part. The skin is endowed with sensibility to every possible injurious impression which may be made upon it. But had this kind and degree of sensibility been made universal, we should have been racked with pain in the common motions of the body; the mere weight of one part on another, or the motion of the joint, would have been attended with that degree of suffering which we experience in using or walking upon an inflamed limb.

But on the other hand, had the deeper parts possessed no sensibility, we should have had no guide in our exertions. They have a sensibility limited to the kind of injury which it is possible may reach them, and which teaches us what we can do with impunity. If we leap from too great a height, or carry too great a burthen, or attempt to interrupt a body whose impetus is too great for us, we are warned of the danger as effectually by this internal sensibility, as we are of the approach of a sl point or a hot iron to the skin.

Returning to the consideration of the sensib of the skin, in order more fully to comprehend benevolent effect of it, or in other words, its nec ty to our very existence, I may be excused for ing the argument to the reader as I have deliv it in my lectures to the College of Surgeons.

"Without meaning to impute to you inatter or restlessness, I may request you to observe every one occasionally changes his position and the pressure of the weight of his body; were constrained to retain one position during the w hour, you would rise stiff and lame. The sensib of the skin is here guiding you to that, whic neglected, would be followed even by the deat the part. When a patient has been received the hospital with paralysis of the lower part of body, we must give especial directions to the n and attendants that the position of his limb changed at short intervals, that pillows be pl under his loins and hams, and that they be c shifted. If this be neglected, you know the cc quence to be inflammation of the parts that upon the bed; from which come local irrita then fever and mortification and death.

"Thus you perceive that the natural sensib of the skin, without disturbing your train of thou induces you to shift the body so as to permit free circulation of the blood in the minute ves and that when this sensibility is wanting, the ut attention of friends and the watchfulness of the n are but a poor substitute for this protection w nature is continually affording. If you suffer lying on a soft bed, when deprived of the sensib of the skin, how could you encounter without i rubs and impulses incident to an active life? must now acknowledge that the sensibility of skin is as much a protection to the frame gener as the sensibility of the eyelids is to the eyes, gives you a motive for gratitude which probably never thought of."

The sensibility of the hand to heat, is a diffe endowment from that of touch. This sensibili the varieties of temperature is seated in the and is, consequently, limited to the exterior su of the body. The internal parts of the body b of a uniform temperature, it would have been them, a quality altogether superfluous. But a are surrounded by a temperature continually v ing, and are subject to destruction by its extre and as we must suit our exertions or our con ances so as to sustain life against these vicissitu our possession of this peculiar sensibility on the face affords another proof of there having be foreknowledge of our condition. We might, inc take our former example in evidence of what befall through the want of this sensibility—the l lytic is brought to us severely burned, or with extremities mortified through cold. A man ha lost the sense of heat in his right hand, but re ing the muscular power, lifted the cover of a which had fallen into the fire and deliberately placed it, not being sensible that it was burning the effect, however, was the death and destru of the skin of the palm and fingers. In this there was a continual sensation of coldness in affected arm, which actual cold applied to the tremity did not aggravate, nor heat in any de assuage. Sensibility to heat is a safeguard i much as it is capable of becoming a painful se tion, whilst it is a never-failing excitement to acti and a continual source of enjoyment.

(To be continued.)

Many have fallen by the edge of the sword, not so many as have fallen by the tongue.

For "The Friend."

BIOGRAPHICAL SKETCHES,

of ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 405.)

THOMAS PARKE.

Thomas Parke, a short testimony concerning whom tells us, came from Ireland to Pennsylvania, in the year 1724, being "well recommended by certificate." He settled in Caln, Chester county, Pennsylvania, and after some years of orderly and consistent walking, was appointed an elder for Bradford Monthly Meeting. He "was well respected by friends in general." He appears to have filled a useful rather than a shining position in society, and was released from his labours on the 31st of the first mo., 1738.

MARY WILLIAMS.

Mary Williams, the wife of George Williams, of Shrewsbury Monthly Meeting, was one who had a comparatively early life submitted her neck to the yoke of Christ, and through the instructions of the Holy Spirit had become qualified for usefulness in his church. About the year 1732, she married, and was introduced into the difficult position of a step-mother, which she filled with propriety and affection. She was of a weakly constitution, but was very diligent in the attendance of religious meetings, seldom allowing her infirmities of body to prevent her being on such occasions with her friends.

She had been called to, and qualified for the service of the ministry, and, when she married, was without doubt tried that no meeting of ministers and elders was held in Shrewsbury Quarterly Meeting. The number of ministers was small, and encouragement had been suffered to prevail, so that were without representation in the General Meeting of Ministers. At the next Yearly Meeting after her marriage, Shrewsbury Friends requested the establishment of a meeting of ministers and elders, which was granted, and Mary Williams was one of the first representatives appointed to the general meeting." She was frequently in attendance at the large gatherings in Philadelphia and Burlington, endeavouring to perform her duty in larger as well as smaller meetings.* Her friends say, "she was "plain in speech and apparel, and endeavored to keep her family so. She was well beloved by her husband's children, her neighbours and acquaintance; was of a cheerful disposition, circumspect, and bore her afflictions with much patience." "She had a gift in the ministry, which was comfortable and edifying, and she has left a sweet savour behind her."

She deceased the 9th day of the Second month, 1739.

JOHN WILDMAN.

John Wildman, an elder of Middletown Monthly Meeting, Bucks county, deceased Third mo. 27th, 1739.

SOPHIA ARMITT.

Sophia Johnson, a religious young woman, and member of Philadelphia Monthly Meeting, was married, in the Eighth month, 1701, to Richard Armitt. Her walk in the world and in her own family, was circumspect, and in due time, having shown herself able to govern her own family aright as a careful christian mother, the burden of the care of others in the church was laid upon her. As she grew in religious experience, she was appointed an elder, and was, her friends say, "Of an exemplary life and conversation." She was "diligent in the attendance of religious meetings, whilst of ability of body," and "was well beloved and esteemed." Towards the close of her life, bodily infirmities kept her much at home. She departed this life, First mo. 25th, 1740.

* About the beginning of the last century, no meeting of ministers was held in New Jersey. Many of those who had been foremost in their Master's cause, had been removed by death, and a strange want of zeal prevailed. For many years the General Meeting of Ministers of the Yearly Meeting, kept a committee under appointment, in order to keep up a meeting of ministers in Burlington.

ELIZABETH LIPPINCOTT.

Elizabeth Wills, daughter of John and Hope Wills, was born in Northampton township, Burlington county, West Jersey, on the 14th day of the Seventh month, 1697. Submitting to the tendering impressions of the Holy Spirit on her mind, she became weaned from an inordinate attachment to the things of this world, and found her heart and affections set upon things heavenly. Marrying Freedom Lippincott, she became a member of Evesham meeting, and under the trials and probations which attended her in the married life, she appeared to deepen in spiritual knowledge, and became more and more useful in the church.

A gift of gospel ministry was conferred upon her, which she exercised to the edification of the church. In an account of her last illness, we find it stated, "She was a religious woman, and it pleased God to give her a testimony, to the comfort of her friends."

She was taken sick on the 25th of the First month, and her pain was very severe, and to increase her distress, the enemy was permitted to buffet her, and to infuse doubts into her mind as to her preparation for the kingdom of rest and peace. But as she looked to the Lord for comfort, he rebuked the enemy, and strengthened her to bear testimony to his goodness to her in the midst of her closest suffering. On being asked if she thought she should die, she said, "I do not know, but am willing to leave it to Providence! He knows best what he has for me to do. I shall be easy, which way it may please the Lord to order it. If I die now, it will be well with me; if I live longer, I hope I shall be as willing to die, when my time comes, as I am now. If I may have my choice, I had rather die now, for I shall escape abundance of trouble." "So, if it please the Lord to take me from them, I hope I shall be thankful to him as I am at this time. He suffereth not the enemy to come in like a flood with his lies, as at the beginning of my illness." [He said,] "I was going to die, and was not ready for death. He told me I had never done my duty to my Maker! But blessed be the name of the Lord, the enemy was soon put aside, and I have felt the arm of strength, that has been my support in all my trials." She said, the enemy had not since assailed her.

Her illness rapidly increasing, she one night sent for her husband, and on his coming to the bedside, she took him by the hand, and said, "Come, my dear, and sit down by me. My time is but short, before I shall be at rest." On his inquiring what he should do with the children, she answered, "I shall leave them to God's mercy, and thy care."

On her aged father coming to see her, she said to him, "My time is short. I would not have thee take it hard; I shall be happy. It will not be long before thou comest after me. We are like people going a journey; some set out two or three days before the rest. You will all soon come after me."

Several of her brothers, sisters and friends standing by her bedside, she felt a flow of gospel ministry, and although very weak in body, yet was so strong in spirit with love to the Lord, his Truth and people, that she spake to them very sensibly. She exhorted them to prepare for death, before they came to a sick bed. She said, "You will have enough to do to bear the affliction of the body, without having a disturbed mind." She told them that if she had her work then to do, she did not believe she would have been able to retain her senses for half an hour. "I was prepared for death before I was taken sick; although the enemy was permitted to come in with his lies for a trial when I was first taken, now I can say with the Holy Apostle, 'I have kept the faith.' I do not speak these things boastingly." "Dear Friends, do not mourn for me; I shall go to a better place." "I am not afraid of death; it is no surprise to me. I can say, 'Come Death! where is thy sting?' Oh, grave! where is thy victory?' I would have you all ready."

Samuel Lippincott, her husband's brother, coming in, she commended her children to his care, desiring that he should exercise a care that they might be brought up in the fear of God. Samuel, assenting to her wishes, spoke of her husband's loss in her removal. She said, "He must keep to Truth, and then Providence will provide for him. He will yet provide for him as he keeps to Truth. Do not in thy trouble get too low; and be sure, my dear, do not let anything lift thee up. I take it as a great favour that the Lord is about to take me from the harms to come. If I die now, I shall be in favour with God; if I should live longer, and be disobedient so as to be out of his favour, it would be a dreadful thing. I take it a favour from the Lord, that he takes me in mercy and love. My prayers are as strong as ever that the work the Lord has begun upon earth, may be carried on,—that Truth may prosper." Mentioning the names of two Friends, she said, "I should be glad to see them. They are my husband's sisters; they are mine. His bone is my bone, and his flesh is my flesh. That which is near to him is near to me."

She gave messages of love to some absent friends, and good advice to her oldest son, and, in great peace, departed this life, Second month 2d, 1740, being in the 43d year of her age.

The testimony concerning the above Friend from Haddonfield Monthly Meeting, is very brief:—

"Elizabeth Lippincott, who, some time before, and till her decease, had a lively public testimony to bear, in her last sickness, would often speak of her heavenly consolation. She departed in a sweet frame of mind.

(To be continued.)

An Interesting Relic.—One of our daily journals says:

Yesterday an old leaf of the "Niles Republican," while being blown along our streets, was picked up by a gentleman and handed to us. Curiosity prompted us to examine it, and we found the following letter from Robert Fulton, addressed to Joel Barlow, Philadelphia.

"New York, August 2, 1807.

"My Dear Friend—My steamboat voyage to Albany and back, has turned out rather more favorable than I had calculated. The distance from New York to Albany is 150 miles; I ran it up in 32 hours, and down in 30. The latter is just five miles an hour. I had a light breeze against me the whole way going and coming, so that no use was made of my sails; and the whole voyage has been performed by the power of the engine. I overtook many sloops and schooners beating to windward, and passed them as if they had been at anchor.

"The power of propelling boats by steam is now fully proved. The morning I left New York, there were not, perhaps, thirty-thousand people in the city who believed the boat would ever move a mile

an hour, or be of the least utility. And while we were putting off from the wharf, which was crowded with spectators, I heard a number of sarcastic remarks. This is the way, you know, in which some people compliment what they call philosophers and projectors.

"Having employed much time and money, and zeal in accomplishing this work, it gives me, as it will give you, great pleasure to see it so fully answer my expectations. It will give a cheap and quick conveyance to merchandise on the Mississippi and Missouri rivers, which are now laying open their treasures to the enterprise of our countrymen. And although the prospect of personal emolument has been some inducement to me, yet I feel infinitely more pleasure in reflecting with you on the immense advantage that my country will derive from the invention."

For "The Friend."

The present condition of our country presents a very mournful, and in some parts, a truly appalling picture. It gives evidence of the absence of sound christian principle in very many, which would lead them, did they possess and regard it, to do justly to all men of every nation and colour, "to loose the bands of wickedness, to undo the heavy burdens, to let the oppressed go free, and to break every yoke." For the purpose of spreading slavery in a new territory, the upholders of this system of oppression and human degradation have disregarded and broken a solemn compact, the consequence of which is, citizens of the United States have become involved in war with each other, and threatening the dissolution of the Union, under which so much happiness and prosperity have been enjoyed. Where the benign spirit of Christianity is rejected, the principle of selfishness, which disregards the rights and the happiness of others, may finally lead to seek revenge on those who abhor the practice of slavery, and who, on proper occasions, and in a christian spirit, believe it to be their duty to protest against it. Almost every day furnishes instances of increasing bitterness and hatred in slaveholders towards those who differ from them in sentiment respecting this vile evil, but who have a better right to denounce it, than they have to maintain it. If the accounts from Kansas can be relied on, we may judge from the war prevailing there in a part of only one territory, what ferocity and destruction of human life and property, would be the result of such a civil commotion spread over the whole United States. If every one who is conscientiously opposed to slavery, is liable to be robbed of his property, deprived of his right to settle in a new country, and liable to be shot, what a dreadful state of carnage might overwhelm our once peaceful land. Those who are implicated in bringing about the present difficulties, had better remember that "the beginning of strife is as when one letteth out water, and therefore leave off contention before it be meddled with;" and under the influence of a pacific spirit, seek to calm the excited passions of the people, and discourage all direct provocations, and recall the unjust measures they have pursued.

Not only are contention and ill-will agitating the public mind, and endangering the stability of our government, but they have crept into the visible church, producing division amongst the professed believers in Christ, and setting them at variance with one another. While a vindictive spirit actuates members of christian societies, alienating them from each other, what must be its effect upon their religious stability, upon the cause of religion which they advocate? and how can they, with any consistency, call upon the nations to "beat their swords into plowshares, and their spears into pruning hooks, and to learn war no more?" Will it not be essential for Friends, if they would exercise a useful influence abroad in promoting peace and good-will, to look into their own condition, to find out what spirit and practice govern them? Christ declared that "he that doeth truth, cometh to the light, that his deeds may be made manifest that they are wrought in God;" and if they are the fruit of His spirit, they must be pure and heavenly, altogether the reverse of a resentful nature that would injure another; for "God is love, and they that dwell in Him, dwell in love." Their actions and example will then be safe for others to follow, and be like "the leaves of the trees, that are for the healing of the nations." We have a decided testimony against war, and to maintain it consistently, we should show to others that we keep the command of the Prince of Peace. "A new commandment I give unto you, that ye love one another; as I have loved you, that ye also love one another. By this shall all men know that ye are my disciples, if ye have love one to another." And if we are also to "love our enemies, do good to them that hate us, bless them that curse us, and pray for them that despitefully use us," we must put in practice the new commandment towards one another; in keeping which it would be apparent that we are the true disciples of the Lord Jesus Christ.

In the year 1759, Friends in Pennsylvania endured many trials both on account of the war and bloodshed, which had prevailed on the frontiers, and the practice of buying and keeping slaves among themselves; and at the Yearly Meeting, John Woolman mentions they had some weighty seasons, where the power of Truth was largely extended, to the strengthening of the honest-minded. Observing an increasing concern among Friends on the subject of slavery, and that the Lord was *raising up and qualifying servants for his work*, not only in this respect, but for promoting the cause of Truth in general, he was humbly bowed in thankfulness before him. "This meeting," he says, "continued nearly a week; and for several days in the forepart of it, *my mind was drawn into a deep inward stillness;* and being at times covered with the spirit of supplication, my heart was secretly poured out before the Lord; and near the conclusion of the meeting for business way opened, that in the *pure flowings of divine love*, I expressed what lay upon me; which, as it then arose in my mind, was first, to show how deep answers to deep in the hearts of the *sincere and upright*, though in their different growths they may not all have attained to the same clearness in some points relating to our testimony. And I was led to mention the integrity and constancy of many martyrs, who gave their lives for the testimony of Jesus; and yet in some points held doctrines distinguishable from some which we hold; and that in all ages where people were faithful to the light and understanding which the Most High afforded them, they found acceptance with him; and that now, though there are different ways of thinking amongst us in some particulars, yet if we mutually kept to that Spirit and power which crucifies to the world, which teaches us to be content with things really needful, and to avoid all superfluities, giving up our hearts to fear and serve the Lord, true unity may still be preserved amongst us; and that if such who were at times under suffering on account of some scruples of conscience, kept low and humble, and in their conduct in life, manifested a spirit of true charity; it would be more likely to reach the witness in others, and be of more service in the church, than if their sufferings were attended with a contrary spirit and conduct. In which exercise I was drawn into a sympathizing tenderness with the sheep of Christ, however, distinguished one from another this world; and the like disposition appeared *spread over others in the meeting*. Great is goodness of the Lord towards his poor creature

We here see the advantage of keeping under government of a right spirit, in our efforts to what we may believe to be a duty. If it is formed "in the pure flowings of divine love," makes its way into the hearts of others, and dr into the unity of the one Spirit, though the faitl may not at once see eye to eye; and where a ference of views prevails, the life in one, as S. C says, will not hurt the life in another. There i sense produced, if it comes from an honest he seasoned with Grace, of the innocent and upri intention of a brother or sister, and then it inf no wound, but leaves all to judge in the openi of Truth, and takes no offence, if what is propo is not at once adopted. Hereby the law of l which casteth out fear—the new commandm which Christ gave, is fulfilled; and the heave harmony and order which belongs to New Jeru lem, that comes down from above, is known preserved unbroken. Her citizens are seen as lig in the world, a city set upon a hill that cannot hid, that has no need of the sun, or of the mo for the Lamb is the light thereof, and the nati of them that are saved do walk in the light of This is the state we were designed to be brou into, and to stand in, to show forth the glor the latter house, the spiritual dispensation of gospel of Jesus Christ.

Is the Centre of the Earth Solid?

It has been usual, till within these few years assume that the solid crust of the globe is of su thickness, and that it rests on a vast nucleus liquefied matter, the source of volcanos, which haps may cause by its ripples the concussion earthquakes. The ground for this view was steady increase of heat in mines, since the same of temperatures, continued downwards, would s bring us to a heat greater than the point of fu of any known substance. But a reaction has l ly set in. Two different reasons have been giv which go far to disprove this once popular view the earth's structure. Mr. Hopkins has shown an able mathematical paper, that the amount nutation produced by the moon's action on equatorial protuberance, will be different for a s globe, and for a thin solid crust reposing on a gl in a state of fusion. The pull, which in one ca transferred to the whole mass, in the other wo mainly spend itself upon the crust alone. The ference which he draws is, that the solid par the earth is not less in thickness than one fifti the earth's radius, or 800 miles. Recent exp ments have also proved that the point of fusio raised, when substances are placed under str pressure.

But there is a further doubt, which the prog of chemical science ought to force on the atten of geologists, before they reason too confidently the process of change, in these early days of earth, from the limited materials of our ac knowledge. They are accustomed to assume ultimate facts, not only an enormous central h by which the mass is liquefied, but the independe of all the chemical ingredients of the globe. it seems more probable that the central heat, si caloric is now ascertained to be simply one kin molecular action, is the result of gradual conden tion; so that, instead of being an independent ca of fluidity, modified by the pressure, its existe may be simply a result of the pressure itself, constitute a kind of internal reaction against it. this case, instead of the central parts being fl

n gradually covered by a solid crust, we may
e aps infer that the transition would be from a
eous state, first to fluidity, and then to solidity
t he centre, surrounded by a thin stratum of fluid,
n an immense gaseous atmosphere; and that, in
portion as the atmosphere was condensed into
id at the upper surface, the increased pressure
rcd convert the liquid into solid below, till the
le approached to its present condition; while
e melted surface might solidify under the cooling
or of an atmosphere of permanent gases and
eous vapour.

gain, it is quite conceivable, and perhaps not
obable, that our present elements are not really
ict, but capable of being formed from each
r under special circumstances of heat and pres-
. It will be possible, in this case, that the
ical composition of the early strata, or of the
er which lies still deeper, may have depended
he mechanical condition of the earth at the
n when they were upheaved or deposited. These
s open out a wide field of inductive inquiry,
ch has not yet been even touched upon, but
ch will be found, we suspect, before long, to modify
y of the popular forms of geological reasoning.
chemistry has taken one stride in advance,
ch it seems ready now to do, all theories on the
y changes of the earth must remain thoroughly
rfect and immature. But if once it is estab-
d that our present elements are compound, it
be possible to trace unsuspected relations be-
n their atomic nature, and the circumstances
eat and pressure which prevailed when the
onic rocks were upheaved by central fires from
bosom of the abyss.

(Conclusion next week.)

etter of the Duke of Buckingham, written a
t time before his decease.

Your men of wit generally look upon them-
s as discharged from the duties of religion, and
ine the doctrines of the gospel to people of
ner understandings. It is a sort of derogation,
heir opinion, to comply with the rules of Chris-
ity; and they reckon that man possessed of a
row genius, who studies to be good. * * *
at a pity that any person should pass for a
eman in this world, but he that appears soli-
us about his happiness in the next."

frican Logic.—An old farmer—one who fear-
neither God nor man—had hired a devout negro;
to get some Sunday work out of him would
ays plan a case of "necessity" on Saturday,
on Sunday morning would put this case to the
n's conscience. One morning Sambo proved
factory. "He would work no more on Sunday."
master argued with him that it was a case of
cessity"—that the Scriptures allowed a man to
out of a pit on a Sabbath day a beast that had
n in. "Yes, massa," rejoined the black, "but
if he spent Saturday in digging for de berry
pose."—*Late Paper.*

Curious Instinct of Plants.—Hoare, in his trea-
on the vine, gives a striking exemplification of
instinct of plants. A bone was placed in the
ng but dry clay of a vine border. The vine
t out a leading or tap-root, directly through the
y to the bone. In its passage through the clay
main root threw out no fibres; but when it
ched the bone, it entirely covered it, by degrees,
h the most delicate and minute fibres, like lace,
h one sucking a pore in the bone. On this lus-
us morsel of a marrow bone would the vine con-
ue to feed as long as any nutriment remained to
extracted.—*Scientific Amer.*

THE FRIEND.

NINTH MONTH 6, 1856.

The present number closes the twenty-ninth volumn of "The Friend," and with our next it will enter on the thirtieth year of its age. Within the past year, as in several of those that have preceded it, it has had its trials, such as most Journals of its kind must expect to encounter, but it has nevertheless continued to receive a good share of support and encouragement. Where there are conflicting opinions on points of general interest, as well as a variety of tastes for literary productions, it is difficult to please all; so that while there is a conscientious adherence to sound principle, and a manifest desire to cater in accordance with a proper discretion for the different wants to be supplied, there should be mutual forbearance on the part of those who publish and those who read such a periodical as ours. Communications from different quarters have been received, some objecting to certain things connected with the course that has been pursued, and others commending that course, and the manner in which those having control of the journal have steadily persevered in the path marked out for it in the beginning, and the concern evinced to uphold the doctrines, the testimonies, and the discipline of the Society, without regard to party views or party feelings.

Most of those who have expressed the opinion that there was not wide enough scope given in publishing everything referring to the present disjointed condition of our Religious Society, have yet acknowledged, that the matter to be found in our columns was generally interesting and instructive, and much of it calculated to cherish a love for the Society, and the pure, spiritual views of Christianity that it professes, rendering it a valuable visitor in their families; and from such testimony we have taken no little encouragement.

Those who have control of "The Friend" have no motive in conducting it other than to promote the interests of the Society; their object in filling it with the matter that is weekly presented to the readers of its pages, is to maintain a journal under the supervision of Friends, free from everything calculated to lay waste or weaken their principles, and affording to those among whom it circulates a variety of useful information in science and literature, recording a summary of the most notable passing events of the day, and, above all, keeping before them in succinct essays and narratives the great truths of our holy religion, and endeavoring to incite them to a life of godliness, walking in all things consistent with the vocation whereunto they are called.

In the various publications of the day, including many of the modern professedly religious works, there is much calculated to catch the attention and captivate the affections of the young, and of the inexperienced, while the standard of religion which they exhibit and invite to, falls so far below the pure self-denying principles and precepts of the gospel, as promulgated and exemplified by all true Quakers from the beginning, that there is great danger of our members who peruse them, being irretrievably beguiled, and induced to take up their rest, in a faith, that however specious to the unanointed eye, is yet a dead faith, so far that its operation is not to purify the heart, though it may lead into great activity and a show of will-worship. It is therefore of special importance, to have frequently brought into view, the doctrines of the gospel as exemplified in their full and just proportions by our early Friends, the testimonies that spring out of the practical application of those doctrines, and the exceeding great cost of blood and suffering at which they were maintained and transmitted to succeeding generations, as a precious legacy. More especially is the frequent exhibit and consideration of these things an incumbent duty at the present time, inasmuch as works containing views adverse to the faith of Friends, are circulated among us, and there is manifested by not a few, in parts of the Society, a strong desire, if not a determination to disregard and lay waste some of its long cherished testimonies, and in many respects to assimilate more nearly with other denominations, in order to avoid the offence of the cross. To point out and endeavour to counteract these deplorable defections is an object of primary importance, and it has been, and continues to be the purpose of the "Contributors to the Friend" to assist therein, so far as they may be enabled to do so. They are likewise solicitous to encourage Friends everywhere, to a faithful support of the faith, the discipline and the order of the Society, under the peculiar trials to which they may be subjected, in consequence of the division and disunity introduced by the dissemination of the unsound views to which we have alluded, and the inroads of the spirit of the world among those professing our name. It is evident that much suffering must yet be borne by all who are sincerely labouring for the maintenance of the truth, and the restoration of the Society to primitive purity, order, and zeal; and greatly is it to be desired and sought after, that such may be brought, in the fellowship of the Gospel, to labour harmoniously for the promotion of this blessed cause.

We trust that "The Friend" will continue to pursue the even tenor of its way, contributing its share towards the attainment of this desirable end, and affording its readers the usual supply of wholesome food for the mind. We shall feel obliged at all times for original communications, or well selected extracts for our columns, and hope that our friends will continue their efforts to promote the circulation of the journal in their respective neighbourhoods.

SUMMARY OF EVENTS.

Just as our paper was going to press, an extra was published, containing the following items of intelligence brought by the Persia, which sailed from Liverpool on the 23d ult.

Liverpool Markets.—The Brokers' Circular quotes a decline in cotton, affecting lower grades about 1-16. Other qualities are unchanged in every respect. There is a large export demand, but holders are not pressing their supplies upon the market. The sales of the week have been 47,325 bales, including 2250 on speculation and 9000 on exporters. The sales (Sixth-day) were 6000 bales, the market closing unchanged, with a moderate demand. The quotations were as follows:—New Orleans fair, 7; middling, 6 5-16; Mobile fair, 6⅞; middling, 6 5-16; Upland fair, 6 9-16. The weather continued unsettled, and reports prevailed of the existence of the potato disease. Wheat has advanced 2*d.* a 3*d.*; flour is 1*s.* a 2*s.*, and corn has advanced 2*d.*

Richardson Brothers quote red wheat at 7*s.* 9*d.* a 10*s.*; white wheat, 10*s.* a 11*s.*; Western Canal flour and Baltimore flour, 30*s.* a 32*s.* 6*d.*; good Ohio, 33*s.* a 34*s.*; mixed corn, 33*s.*; yellow corn, 33*s.* 6*d.*; white, 35*s.* Provisions are unchanged. Manchester markets are steady, but prices are unchanged. The bullion in the Bank of England has increased £39,600. American stocks are unchanged. Money market without change. Consols for money are quoted at 95¼ a 95¾. The steamship Arabia, from Boston, via Halifax, was off Liverpool, on Seventh-day. This removes the fears entertained for her safety, in consequence of being ashore near Halifax. The City of Baltimore, from Philadelphia, arrived on the 20th ult.

ENGLAND.—Parliament has been further prorogued to Eleventh month 13th. D'Israeli's leadership has become distasteful to his followers. The London Times approves editorially of Secretary Marcy's reasoning on the subject of privateering. The Queen of Oude, mother of the deposed monarch, was in England, for the purpose of complaining of the East India Company.

FRANCE.—Napoleon remained at Biarnitz. It is reported that he is urging the claims of Prince Pierre Bonaparte to the throne of the Danubian kingdom, and considering what title to bestow on the American de-

scendant of Prince Jerome. The harvest in France is considered fully an average one.

HOLLAND.—A brilliant celebration occurred here to-day in honour of the twenty-five years' peaceful reign of the King of Holland. The government of Holland has refused to assent to the principle of leaving disputes of nations to arbitration before a resort to arms, recommended by the Paris Peace Congress.

SPAIN.—There is nothing very important from Spain. Tranquillity prevails throughout the kingdom. A free import of breadstuffs is invited until Sixth month, 1857. The difficulty with Mexico is still unsettled.

ITALY.—A doubtful report is current that England and France have addressed an ultimatum to the King of Naples, and in the event of a refusal to comply with its requisitions the representatives of France and England are immediately to quit Naples. The demands are stated to comprise a general amnesty and various administrative and judicial reforms. The King is reported to have consented to some of the required concessions, but not to a satisfactory extent. A report is also current that the King intended to abdicate in favour of the more liberal Prince of Calabria.

SANDWICH ISLANDS.—Advices from the Sandwich Islands have been received to Seventh mo. 5th. A severe shock of an earthquake occurred on the 8th of Sixth mo. At Hawai, a stream of lava had flowed to the southward from Mauna Loa, leaving Hilo safe.

AUSTRALIA.—Advices from Sidney to Fifth month 20th, mention that extensive deposits of gold have been discovered in Western Australia.

NICARAGUA.—The latest news indicate that Walker's difficulties were increasing. A large body of Salvadorians and Guatemalians had assembled at Leon, and an attack from them was threatened. Walker's forces were being rapidly reduced by sickness and desertions.

UNITED STATES.—Throughout the whole of last week, Congress continued in session, the Senate and House of Representatives having been unable to come to any agreement. Another Committee of Conference was appointed, without any result. On the 29th, the House decided to adhere by a vote of 101 to 97, and the Senate voted to adhere to its amendment, striking out the House proviso,—yeas, 32; nays, 6. The speakers of all parties, in the Senate, admit the odious and atrocious character of some of the laws of Kansas, but some Senators deny the power of Congress to annul or suspend them. A resolution passed in the House, and received the signature of the President, appropriating $40,000 for the purchase of the British ship Resolute from the salvors, who found her abandoned in the Arctic Seas, where she had been sent in search of the Franklin expedition. The purchase is made for the purpose of restoring the ship to the British government. On the 30th ult., the Army Appropriation bill was passed by both Houses, without the Kansas proviso, by a vote in the Senate of yeas, 26; nays, 7—in the House, by a vote of yeas, 101; nays, 97.

California.—Two weeks later news from San Francisco have been received by the steamship Illinois, at New York, from Aspinwall. She connected at the Isthmus with the steamer Sonora, which brought down upwards of $1,800,000 in gold. The Illinois brought to New York on freight $1,465,000 in gold. The Sierra Nevada left San Francisco on the 5th, for San Juan. She took down $100,000 in specie and 300 recruits for General Walker's army, beside a number of settlers. The Vigilance Committee was still in power in San Francisco. On the 24th ult., a rencontre occurred between Joseph Hetherington and Alexander Randall, large real estate operators, doing business together, in which the latter was shot and mortally wounded. Hetherington was immediately taken into custody by the agents of the Committee, and was hung on the 29th. Philander Brace, who committed a murder two years since, was hung at the same time. Four thousand of the committee's troops were present under arms, and all the approaches to the place of execution were guarded by cannon. Judge Terry, of the Supreme Court, was still in the custody of the Vigilance Committee, and it was not known how he would be disposed of. The Superintendent of the U. S. Branch Mint has notified the persons employed there, who are members of the Vigilance Committee, that they must either withdraw from the Committee, or leave the Mint. The Peruvian slave ship Terese Terry put into San Francisco, with 150 Chinese, kidnapped at Macao, and destined for the Peruvian mines. An attempt was made to detain her, but it failed, and she got off.

At the great fire at Nevada, over 800 buildings were destroyed, and ten lives lost. The value of property destroyed amounted to more than two millions. The deposits of gold at the Branch Mint, during the Seventh month, exceeded three millions of dollars. The markets were overstocked with goods, business prospects gloomy, and it was expected that the late shipments of goods from the east would not cost and charges. Palmer, Cook & Co. had failed to pay the interest on the State bonds due last month.

Salt Lake.—Advices from Salt Lake to Sixth mo. 23d, state that the vegetables have been nipped by the frost. The grain crops had also failed, and fears were entertained that the people would suffer for want of food.

Philadelphia.—Number of deaths last week, 264.

New York.—Mortality last week, 562; a decrease of 5 compared with the deaths of the week previous.

Kansas.—J. W. Geary, the newly appointed governor, has left Washington, to proceed direct to the territory. A dispatch from St. Louis, of Eighth mo. 27th, says that advices from the border counties state, that 2500 men would enter Kansas on the 23d. Shocking excesses have been committed on the Free State settlers, near Leavenworth. Another report states that the "Quaker Mission," twenty miles from Kansas city, had been broken up and dispersed by a party of Missourians. The Free State settlers, and their families were reported to be leaving the territory in large numbers. A letter from Gen. Smith, commander of the U. S. troops in Kansas, dated Eighth mo. 11th, states that Gov. Shannon had requested him to employ his whole disposable force to prevent the ingress of Lane's party by the northern boundary of the territory, but that he had declined making any movement, knowing that the information given to the Governor, was exaggerated and incorrect. He states that troops had been sent at the Governor's request to break up camps of armed men at several places that he designated. On the arrival of the troops there, not only were no camps to be found, but none had ever existed there, or anywhere else in the vicinity.

Newspapers, North and South.—According to the census of 1850, the newspaper circulation in the free States, amounted to 334,147,231; in the slave States, to 92,-165,929. The three cities of Boston, New York, and Philadelphia publish twice as many newspapers as all the South.

Public Libraries.—In 1850, the public libraries in the free States contained 3,883,617 volumes; those in the South 752,794. The public libraries of New York alone contained 1,760,820 volumes.

New Material for Paper.—The Cleveland (Ohio) Plaindealer, says:—The Planet brought down from Lake Superior a thousand pounds of moss for Dr. Terby, of Detroit, who has been making experiments upon it in the manufacture of paper. The Doctor says that moss makes a beautiful white paper, without any preparation of the raw material for the common paper mills. In all respects it is equal to linen rags, and can be found in unlimited quantities on Isle Royale and several other localities in the vicinity, at a very small comparative cost.

RECEIPTS.

Received from J. B. Pusey, Pa., for Thos. Kinsey, $2, vol. 30; from Jas. T. Frame, Io., $2, vol. 29; from H. D. Metcalf, Md., $2, vol. 29; from Levi Wickersham, Pa., $2, vol. 29; from J. Fawcett, agt., O., for J. Heald, Jos. Taylor, N. Armstrong, M. J. Fawcett, Z. French, $2 each, vol. 29, for Benj. Harrison, C. J. Hayes, Nathan Holes, Amos. Fawcett, R. Woolman, $2 each, vol. 30, for J. S. Cadwalader, $4, vols. 29 and 30; from Wm. Foulke, agt., O., for John Burgess, Wm. Stephens, $2 each, vol. 30, for Wm. Masters. $2, to 14, vol. 30; from —— ——agt., O., for Dl. Mott, $6, vols. 28, 29 and 30, for Harman Rhoads, $2, vol. 29, for Caleb Fowler, Caleb Engle, Wm. Crew, $2 each, vol. 30.

HAVERFORD COLLEGE.

The winter term will commence on Fourth-day, 15th of Tenth month. Terms, $250 per annum, including Tuition, Board and Washing. Applications for admission should be made early.

Address, Jonathan Richards, Superintendent, West Haverford, P. O., Pa.; Thomas Kimber, 50 North Fourth street, Philadelphia; or Robert Pearsall Smith, 17 Minor street, Philadelphia.

EVENING SCHOOLS FOR ADULT COLOURED PERSONS.

Wanted, A Principal and two Assistant Teachers for the Men's School, and a Principal and three Assistants for the Women's School.

Application may be made to either of the undersigned.

JOHN C. ALLEN, 4537 Fifth street.
SAMUEL ALLEN, 109 Front street.
WILLIAM L. EDWARDS, No. 37 Arch street.

MARRIED, at Friends' Meeting, Burlington, N. J., Fifth-day, the 14th ult., SAMUEL F. TROTH, of Philadelphia, to ALICE LIPPINCOTT, of Burlington county, N. J.

DIED, on the 11th of Eighth month, 1856, in the year of her age, ELIZABETH ALLINSON; a valuable elder of Burlington Monthly Meeting, N. J. It is believed instances are rare of greater dedication to the will service of the Most High, or of greater strength of faith than was manifested in the life of this beloved disciple. She was blind from her birth, with the exception of faint glimmer of sight in one eye. Of this privation was in her childhood keenly sensible, but being favoured in very early life with the visitations of Divine love, was obedient to the heavenly vision, and being throughout mercy confirmed to the will of the Lord, she became resigned to a dispensation to which, till then, she could not refer without tears. Thus early blest with an interest in Christ, choosing him for her Leader, and following him in singleness of heart, she was enabled very conspicuously to adorn his doctrine, and as a true Mother in Israel, to be a helper and instructor to many in the right way of the Lord. Clear in her perceptions of christian doctrines, deep in her experience of heavenly things, and gifted with a discerning spirit, she was remarkably introduced into sympathy with ministers, participating in their exercises, and in weightiness of spirit bearing the burdens, and thus fulfilling the law of Christ. Her age as an elder being acknowledged by the church, she entered on the service in meekness and in the fear of the Lord, in fervent love to her fellow members, but with fidelity as one who must give an account; being very careful to wait upon her Master for qualification in every exercise in His service. When furnished with the needful panoply, she yielded not to the snare which consequent upon the fear of man; but being always clothed with true humility, as not known what she ever wounded those with whom she was concerned to labour. Her strength of faith was very instructive. Fully believing in the sufficiency of the ransom given for the church, and having in herself the evidence that she had passed from death unto life, she steadily maintained holy confidence that her faithful Redeemer would not cut short the thread of her life before his own work in her was perfected. And so she passed through a way which to her was one of visual darkness, leaning as a dear child on the bosom of Jesus. Free from presumption or any self-reliance, and often humbled in the dust in the sense of unworthiness, it is not to be wondered at she ever distrusted her Saviour, or wavered in her offered expressed conviction, that her death, whenever it should occur, would be "the crowning mercy of her life." Being a woman of enlightened and active benevolence, she "went about doing good," and choosing privacy in the visits of love to the members of her own Society, to the poor, and to individuals who were in practices subversive of the public welfare, she walked much abroad without any attendant, having a singularly full faith that she would be preserved from any serious injury. This prospect was strikingly realized, although she was often in great apparent danger from horses and from locomotives. In meetings for discipline she was eminently useful. She travelled pretty extensively in the service of Truth. Her correspondence, performed by the aid of an amanuensis, was of an instructive character, and her memoranda are calculated to be beneficial to survivors. During more than forty years, in which the writer has had large opportunity of observing her, it may be said that her "conversation was in heaven," being weighty and edifying in its season, and she wonderfully exhibited the spiritual need of those with whom she was brought in contact. On one occasion, a few years ago, a professed stranger, supposed to be a religious professor, was her company for about five minutes. On his being introduced to her, she immediately began to speak of the offices of Christ, of the necessity of true faith in Him, of our indispensable need of a Saviour, and the vast importance of the work of the soul's salvation. The stranger listened with great attention. After his departure it was discovered that he was an atheist, and had recently presided at an Infidel Convention. He died suddenly, a few days after this interview. During her last illness, which was brief, her patient fortitude, humility and heavenly-mindedness were impressive, and the Divine presence was sensibly felt to the end. The last note made a few days before her release, after referring to the safety of some who were centred "*where we are longed also to be gathered,*" closed as follows: "May my mite be clothed with reverent gratitude for the continuance of innumerable blessings from the bountiful Giver, and may I be enabled to glorify Him, by wearing a cheerful countenance under the increasing infirmities attendant upon the poor frail tabernacle."
